merchandise is not specially provided for in Schedule 7 and is classifiable under the provision for nonwoven fabrics, of textile materials, whether or not coated or filled, of man-made fibers, in item 355.25, TSUS, with duty at the rate of 8 cents per pound plus 14.2 percent ad valorem.

Because the second type of material has a layer of expanded plastics material which provides its essential character, that merchandise is also not classifiable in Schedule 7. The provisions in Schedule 7 for film, strips, and sheets, wholly or almost wholly of rubber or plastics are found in Subpart 12B. Headnote 2(iii) to that subpart states that the provisions in that subpart do not cover articles provided for in Subpart 12A. Subpart 12A contains provisions for expanded, foamed, or sponge rubber or plastics and articles not specially provided for, wholly or almost wholly of such rubber or plastics. Thus, by reason of that headnote, the merchandise is not classifiable under the specific provision in Subpart 12B, Schedule 7. Rather, if it were classifiable in Schedule 7, it would be classifiable under a provision for articles not specially provided for, in Subpart 12A. Since it is not specially provided for in Schedule 7, Headnote 1(vii) of Subpart 4C, Schedule 3, is not applicable and the merchandise is classifiable in that subpart. The merchandise is properly classifiable under the provision for woven or knit fabrics of textile materials, coated or filled with rubber or plastics material, or laminated with sheet rubber or plastics, of man-made fibers, not over 70 percent by weight of rubber or plastics, in item 355.82, TSUS, with duty at the rate of 8 cents per pound plus 12.8 percent ad valorem.

Sincerely,

(Signed) Arthur P. Schiffelin

Harvey B. Fox

District Director of Customs
U.S. Customs Service
610 S. Canal Street
Chicago, Illinois 60607

Dear Sir:

This is with reference to your undated memorandum regarding the classification of programmable controllers imported by Square D Company (Request for Internal Advice No. 6/84).

ISSUE:

Whether the programmable controllers described below are classifiable under the provision for other electrical apparatus for making or breaking electrical circuits in item 685.90, Tariff Schedules of the United States (TSUS), or under the provision for electrical articles, not specially provided for, other, in item 688.45, TSUS (1981), and item 688.43, TSUS (1983).

FACTS:

The inquirer imports microprocessor-based programmable controllers identified as SY/MAX-20 controllers. These articles are used for machine or process control. They accept input from push buttons, switches, and other devices, make decisions on the inputs according to a stored program, and generate appropriate outputs to output devices such as motor starters, contactors, solenoids, indicating lights, relays, and decimal readouts. Typical control applications include automated packaging and assembly machines, material handling, machine tools, wood products and paper processing, welding machines, injection molding machines, and film, chemical, food, and petroleum processing.

071823

D9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The SY/MAX-20 is comprised of the following types of components:

(1) Processor. This component performs the logic control functions (relay ladder logic, counting, timing, sequencing, arithmetic, etc.) in an application, based on the stored program and machine or process input/output information. It also contains the system power supply.

(2) Memory Module. This component serves as a storage device for programs designed to run the controller. The memory module plugs directly into the processor, and is interchangeable with other such modules.

(3) Rack Assembly. These devices, in conjunction with the input and output modules, facilitate the transmission of electrical signals between the input and output devices and the processor. There are 3 types of rack assemblies: (1) an input rack assembly, which provides wiring terminals for 16 input devices and serves as the mounting base for 8 input modules; (2) an output rack assembly, which provides wiring terminals for 16 output devices and accommodates 8 output modules; and (3) a combination rack assembly, which holds 4 input modules and 4 output modules, and provides wiring terminals accordingly.

(4) Input and Output Modules. These components convert voltage signals between the processor and the input and output devices encompassed within an application. The input modules accept high level AC or DC voltage signals from input devices and convert them to the low logic level signals required by the processor. The output modules convert logic level signals generated by the processor to high level AC or DC output signals necessary to drive connected output devices. Simulator modules are also available to test programs without wiring any devices to the controller.

(5) Programmer. This device is used to program, edit, monitor, or troubleshoot the SY/MAX-20 system. It is a portable, hand-held device and is connected via a cable to an interface in the processor. A larger CRT programmer, which provides additional monitoring capabilities, is also available.

LAW AND ANALYSIS:

We recently considered the tariff classification of components of a programmable controller in Customs Ruling CLA-2 CO:R:CV:V 071563 KP (March 7, 1985), copy enclosed. In that case, we reasoned that if the

071823

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D10

programmable controller in question were imported as a unit, it would have been classifiable as an entirety under item 685.90, TSUS, inasmuch as it was electrical apparatus whose function was to control other devices by making or breaking electrical circuits. For tariff classification purposes, the SY/MAX-20 programmable controller is not materially different than the merchandise at issue in the above-cited ruling. Therefore, we believe the SY/MAX-20 programmable controller is properly classifiable in item 685.90, TSUS.

HOLDING:

The SY/MAX-20 programmable controller is classifiable under item 685.90, TSUS, which carried column 1 duty rates of 7.7 percent ad valorem in 1981, and 6.9 percent ad valorem in 1983.

Sincerely,

Russell Arnold
Chief, Value and Special
Classification Branch

DEPARTMENT OF THE TREASURY U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE

MAR 1 1983

CLA-2 CO:R:CV:G
072130 JH

Dear

This is in reference to you inquiry concerning the tariff status of certain imported methanol. The methanol is said to be imported by ocean tankers in quantities of over 1 million gallons and stored in storage tanks in New Jersey, Houston, Texas and other locations. It is estimated that currently 1/3 of such imported methanol is used for fuel use and the remainder for nonfuel uses.

It is urged that the methanol be permitted to be entered under the actual use provision in item 427.96, Tariff Schedules of the United States (TSUS), and that the importer be permitted to notify Customs of any diversions and to pay duty on any methanol so diverted. It is added that the importer would comply with the "actual use" regulations by making a declaration of intent at the time of importation and providing Customs within 3 years of entry, with proof that the methanol was used directly as a fuel. The importer, it is claimed, would add additional methanol periodically to the storage tanks which would already contain previously imported methanol intended for fuel use. Such methanol would be accounted for on the "first-in - first-out basis."

It is argued that this manner of interpreting the actual use regulations is consistent with that permitted in the Canadian original motor-vehicle equipment regulation, section 10.84(d), Customs Regulations, which permits the importation of Canadian original motor vehicle equipment to be diverted from its original intended use, upon notification to Customs and payment of duties, or the arrangement for destruction of the equipment, or export of the equipment under Customs supervision. Also cited are the proposed regulations on civil aircraft and parts which would allow the importer to notify Customs and pay any appropriate duty when aircraft parts are not used on civil aircraft, proposed section 10.80(f), Customs Regulations.

General Headnote 10(e)(ii), is most explicit in stating that a tariff classification controlled by the actual use to which an imported article is put in the United States is satisfied only if such use is intended at the time of importation, the article is so used, and proof thereof is furnished within 3 years after the date of the article is entered. Section 10.133, Customs Regulations, reinforces the intent of this headnote. Section 10.134 leaves no doubt that the intent must be present at entry, in stating that entry under the actual use provision of the TSUS may be construed as a declaration that the merchandise is entered to be used for the purposes stated in that actual use provision. It goes on to state that if there is

D12

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ____

any doubt, the district director shall require a written declaration to be filed, if he is not satisfied that the merchandise entered under the actual use provision will be used for the purposes stated. Thus, it can be seen that the law and regulations are quite clear: There is no provision for diversion, unlike the auto provisions and aircraft regulations cited. At the time of entry "actual use" has to be intended for all the merchandise entered under that particular provision. In the instant case, only about 1/3 of the methanol is intended for direct fuel use. This does not satisfy the intent of the law.

Methanol imported under the circumstances outlined is not entitled to free entry under item 427.96, TSUS.

Sincerely,

(Signed) Arthur P. Schifflin

JUN 14 1983

CLA-2 CO:R:CV:G
072347 JH

Dear Sir:

Re: Decision on Internal Advice 15/83, Classification of SRX Polymer (Concrete Additive)

The merchandise is said to be a polymer composed largely of sulfur. The technical literature indicates that organo-sulfur additives are incorporated into concrete mixes to impart beneficial physical and chemical properties. In this case, a product called "Escopol", a petroleum residue obtained from gasoline refining, is used. It is said to be mainly a dicyclopentadiene which has been partially polymerized. It is understood that a crude unsaturated hydrocarbon mixture (Escopol) is mixed with sulfur in proportions of 80 percent sulfur and 20 percent Escopol under controlled temperature conditions of 140 degrees to 150 degrees C. An exothermic reaction takes place between the unsaturated hydrocarbons and sulfur, with no free sulfur remaining after the action.

The imported product is a mixture of organo-sulfur compounds. The variety of organic hydrocarbon components in Escopol has not been determined. Accordingly, SRX Polymer (concrete additive) is classifiable as a mixture of two or more organic compounds in item 430.20 , Tariff Schedules of the United States (TSUS). The rate of duty is 4.6 percent ad valorem.

JUL 2 2 1983

District Director of Customs
Port Huron, Michigan 48060

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3802-2-000105, on the Classification of Surchem 550

Surchem 550 is described as a fuel oil additive containing magnesium used for the purpose of controlling corrosion in boilers and turbines utilizing fuels of high vanadium content. It is said to consist of 24 percent magnesium carbonate, 10 percent magnesium hydroxide, 8 percent magnesium acetate, 15 percent magnesium sulfonate and 43 percent oil.

The protestant states that the generic composition of the lubricating oil fraction which is sulfonated is not known. It is described as a complex hydrocarbon mixture containing paraffins, naphthenes, and aromatics obtained by solvent extraction of a crude lube stock. The reaction product between this petroleum fraction and oleum is called petroleum sulfonic acid, and when neutralized with magnesium oxide is referred to as magnesium petroleum sulfonate.

The question is whether the product is classifiable as a mixture not specially provided for in item 432.10 or as a benzenoid mixture in item 413.51, TSUS. Classification under item 409.30, as a surface active agent has been suggested.

An analysis of the sample was said to disclose petroleum oil and a benzenoid surface active agent (anionic type). Magnesium sulfonate is a benzenoid surface active agent. The product's function, however, it is to prevent rust, with the magnesium sulfonate acting as a dispersant, so that item 409.30 would not apply.

Although the importer has submitted information on the composition of Surchem 550, he never submitted a detailed flow chart indicating chemical diagrams for every precursor of the ultimate product. Information on whether the manufacturing process produced synthetic benzenoids was also promised by a chemist for Surpass, but none was received. Accordingly, based on the evidence of record, it is concluded that Surchem 550 is a mixture containing a synthetic benzenoid component. It is, therefore, classifiable as a benzenoid mixture in item 413.51, TSUS. You are directed to deny the protest in full.

SEP 14 1983

Dear

Your letter of June 1, 1983, concerns the dutiable status of certain methanol imported from Canada.

is said to import methanol from Canada into Portland, Oregon, for industrial purposes, and enter it as other methanol under item 427.97, Tariff Schedules of the United States (TSUS). A portion of the imported methanol is said to be exchanged for domestically-produced methanol. The exchanged product is said to be sold in the Gulf Coast area for use as fuel. It is, therefore, requested that Customs rule that the quantity of imported methanol, which is exchanged for the domestically-produced methanol used for fuel, be entitled to duty-free treatment under item 427.96, TSUS.

Item 427.96 applies to methanol imported only for use in producing synthetic natural gas or for direct use as a fuel.

Item 427.96 is an actual use provision. General Headnote 10(e)(ii) states that a tariff classification controlled by the actual use to which an imported article is put in the United States is satisfied only (1) if such use is intended at the time of importation, (2) the article is so used, (3) proof of use is furnished within 3 years after the date of entry. Section 10.134, Customs Regulations, states that entry under an actual use provision of the TSUS may be construed as a declaration, as the merchandise is entered to be used for the purposes stated in that actual use provision. It goes on to state that if there is any doubt, the district director shall require a written declaration to be filed, if he is not satisfied the merchandise entered under the actual use provision will be used for the purpose stated.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E3

In this case, the methanol is imported for industrial purposes. A portion of the imported product, subsequently, is a exchanged for domestically-produced methanol which is said to be sold to be used as fuel. In other words, it is the domestic product which is used for fuel purposes and not the imported product. With the exception of the Canadian petroleum exchange provided for in Headnote 4(a), Part 10, Schedule 4, and the drawback provisions which provide for substitution of merchandise of the same kind or quality, there are no provisions in the tariff laws which provide for exchange of domestic and imported merchandise. Accordingly, the tariff does not permit substitution for the purposes of the actual use provisions in circumstances herein described. Therefore, the imported methanol would be dutiable under item 427.97, TSUS.

Sincerely,

(Signed) Arthur P. Schifflin

MAY 15 1984

CLA-2 CO:R:CV:G
072867 JGB
806436 NY File

Dear

You have requested a classification decision on sodium chloride (salt) from Canada when shipped in nylon bags that will hold 2000 pounds of the product. You have further asked whether the reusability of the container has a bearing on whether the salt is imported in bulk, as provided by item 420.94, Tariff Schedules of the United States (TSUS), or other than in brine or bulk, as provided by item 420.96, TSUS.

The office is of the opinion that salt contained in these bags would not be classified in bulk, but would be classified in item 420.96, TSUS. Whether the container is reusable has no bearing on how the salt is classified. The dutiable status of the filled container is governed by General Headnote 6(b) where reusability is a factor.

Sincerely,

[redacted] Arthur P. Schiff[redacted]

[redacted]

Dear [redacted]

This is in reply to your letter of June 16, 1983, concerning the tariff classification of certain roofing material produced in France or Canada. A sample, labeled "Alpagum Decor" was submitted together with assorted literature covering that material and other similar materials.

The products in question are a group of waterproofing or roofing membrane materials, basically made from a core or substrate of a material that has been coated, impregnated, and completely incased in a modified asphalt or bitumen compound. These products generally come in rolls 1 meter wide by 10 meters long and weigh approximately 85 to 90 pounds per roll.

The types of merchandise which have a core or substrate composed only of a nonwoven mat of glass fibers are classifiable according to their component material of chief value. If the merchandise is in chief value of asphalt, classification would be under the provision for other mineral substances and articles of mineral substances not specially provided for, not decorated, in item 523.91, Tariff Schedules of the United States (TSUS), with duty at the rate of 5.9 percent ad valorem. If the merchandise is in chief value of the glass fiber mat, then it is classifiable under the provision for articles not specially provided for, of glass fiber, in item 540.71, TSUS, with duty at the rate of 8 percent ad valorem. For your information, an article is in chief value of a named material if that named material exceeds in value each other component material in the article.

073221/806535

E6

Most of the products which you intend to import have a core or substrate composed of both a nonwoven textile fabric of made-made polyester fibers and a mat of nonwoven glass fibers. Specific specifications for two of these materials were submitted. The first material, "Alparoc 180" consists of layers of asphalt compound, sand stone, a fiber glass nonwoven fabric laminated to a nonwoven polyester fiber fabric, and a polypropylene film. The second material, "Alpal Decor" consists of layers of asphalt compound, sand stone, aluminum screen, a laminate of nonwoven fiber glass fabric and nonwoven polyester fiber fabric, granels (which we assume are mate flakes), and a polypropylene film. Based on the information submitted, the aluminum screen is not the component material of chief value. In both materials, the plastic film is packing material since its sole purpose is to prevent various layers of the roofing materials from sticking together.

Both "Alparoc 180" and "Alpal Decor" are classifiable under the provision for textile fabrics, including laminated fabrics, not specially provided for, of man-made fibers, in item 359.50, TSUS, with duty at the rate of 14 cents per pound plus 24 percent ad valorem.

Sincerely,

(Signed) Arthur P. Schifflin

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: 3 MAY 1984

FILE: CLA-2 CO:R:CV:G
073827 c

LC8510

TO : Area Director of Customs
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Guidelines for Determining the Scope of the Luggage Provisions of the Tariff Schedules

It has come to our attention that importers and domestic producers of luggage are uncertain as to what constitutes luggage within the purview of Schedule 7, Part 1, Subpart D, Headnote 2, Tariff Schedules of the United States (TSUS).

In view of quota restrictions being applied to certain categories of luggage, it is incumbent on the U.S. Customs Service to publish guidelines which will aid all ports in classifying such merchandise and administering the quota.

The general guidelines which are intended to supplement the definitions set forth for luggage in Schedule 7, Part 1, Subpart D, Headnote 2, TSUS, are as follows:

1. Diaper bags or bags constructed to contain wet articles, clean and soiled clothing, baby bottles and other accessories personal to a baby and mother.

2. Roll bags, also known as barrel bags or duffel bags if they have a diameter over six inches.

3. School bags and bags which have been obviously designed or intended for a student to carry books, gym or other school related items while traveling from place to place.

4. Sport bags, equipment bags, knapsacks, backpacks and all like travel bags intended for a specific sport activity or travel.

5. Toilet, shaving, cosmetic and utility bags designed to contain a man's or lady's toiletries while traveling. Usually these are lined with a waterproof liner and often have interior compartments to separate the various toilet items. Usually these are not smaller in size than 8 inches by 5 inches by 2 inches and are designed for use in travel.

ES

6. Insulated picnic bags and like items primarily designed to transport food and beverages and not primarily for their preservation.

7. Garment bags which are substantially constructed and designed for travel.

8. Substantially constructed open top tote bags which are designed to contain various items including clothing and personal effects while traveling, and have at least one side which exceeds 12 inches in length.

9. All other tote bags which are designed to contain various items including clothing and personal effects while traveling and exceed 12 inches by 15 inches by 3 inches or a combination resulting in a comparable capacity.

It should be noted that these guidelines are only guidelines. They are not intended to be rigid criteria. Minor variations in product construction should not be used as a basis for avoiding quota restrictions.

William P. Keppler
For Harvey B. Fox

JAN 29 1985

CLA-2 CO:R:CV:V
074041 LCS

District Director of Customs
Detroit, Michigan 60603

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3801-3-002425

This protest was filed on December 7, 1983, by C. J. Tower & Sons of Buffalo, Inc., on behalf of Lina's Import of Livonia, Michigan, against your decision in the classification of "candy flowers," manufactured by Confetti Mario Pelino of Sulmona, Italy, in the liquidation as follows:

Entry No.	Entry Date	Liquidation Date
83-681786	7/21/83	9/9/83

ISSUE:

Whether the candy flowers at issue are properly classifiable under the provision for:

1. Sugar, derived from sugar cane or sugar beets, principally of crystalline structure or in dry amorphous form, in item 155.20, Tariff Schedules of the United States (TSUS); or*

2. Candy, and other confectionery, in item 157.10, TSUS; or

3. Other edible preparation, not specially provided for (nspf) in item 183.05, TSUS.**

---

* Importation of merchandise classified in item 155.20, TSUS, is subject to absolute quota on a country-by-country basis, as set forth in Headnote 3, schedule 1, part 10, subpart A, TSUS. There is no quota quantity allocated to such products of Italy; furthermore, this product does not qualify as "specialty sugar" pursuant to 3(c)(ii) of the cited headnote. Accordingly, if classifiable in item 155.20, TSUS, the merchandise is subject to redelivery.

** Such merchandise appears subject to absolute quota restraint , if containing in excess of 65 percent cane or beet sugar pursuant to item 958.15, TSUS; however, note CLA-2 CO:R:CV: 073002 and 073277 LCS, 10/28/83, and 072725/072480/069077 LCS, 11/28/83, as construing item 958.15, TSUS, to be inapplicable with respect to this class or kind of merchandise (e.g., sugar-based cake icing decorations).

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

FACTS:

The protestant cites its belief that the merchandise is properly classified as entered in item 155.20, TSUS, or alternatively in item 157.10, TSUS.

The concerned import specialist classified, although there is no indication of the issuance of a CF 25, Notice of Action, indicating notice of the rate advance, the merchandise in item 183.05, TSUS, based on the footnoted Headquarters ruling letter of November 28, 1983.

There is no indication in the file (apart from the N.I.S.'s comment on C.I.E. Form 12, March 22, 1984, attached thereto, that the classifying officer concluded the merchandise was composed of less than 90 percent cane or beet sugar) of a component breakdown by weight of the constituent ingredients, either by way of a laboratory analysis or manufacturer's formulation.

LAW AND ANALYSIS:

There is no evidence to support the protestant's claim of sugar content. Pursuant to the series of ruling letters cited in the second footnote, it is clear that the merchandise is properly classifiable according to the percentage of cane or beet sugar on a dry weight basis contained therein, as follows:

1. If in excess of 90 percent, in item 155.20, TSUS; or
2. If not, in item 183.05, TSUS.

The alternative position advocated by protestant (i.e., item 157.10, TSUS), is without merit, having been considered and rejected in the ruling letters cited in the footnote (see in particular those dated January 31 and July 29, 1983), together with CLA-2 CO:R:CV:G, 072367 LCS, April 19,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

074041

E11

1983, which dealt at length with this issue for the same class or kind of merchandise in a request for reconsideration of our January 31, 1983, ruling letter.

CONCLUSION:

Accordingly, in this particular protest decision, which is not to be considered precedential in any way, we believe that to hold for protestant and classify the merchandise in item 155.20, TSUS, thereby invoking redelivery and the possibility of subsequent penalty action, would be inequitable considering the quantity of merchandise involved and the difference in duties.

Accordingly, we agree in this instance with the conclusion of the import specialist that the merchandise contained less than 90 percent sucrose by weight and is classifiable in item 183.05, TSUS, dutiable at the column 1 rate of duty of 10 percent ad valorem.

The protest should be denied in full and the protestant should be provided with a copy of this determination.

Sincerely,

(Signed) RUSSELL ARNOLD

CLA-2 CO:R:CV:G
074114 JH

Dear

This is in reference to your inquiry concerning the dutiable status of PHOSKADENT from West Germany.

PHOSKADENT Na 211-Sodium monofluorophosphate "MFP" has been imported and classified as sodium compounds, other in item 421.62, TSUS. It is your contention that the compound is classifiable under the provision for sodium compounds: Phosphate, except pyrophosphate, containing by weight not over 45 percent of water of crystallization, in item 421.16, TSUS.

You state that sodium monofluorophosphate or MFP is used in dental cream to prevent tooth decay, and that all importations have been supplied to U.S. dentifrice manufacturers for use in tooth paste. MFP, you add, is created by the chemical reaction of thermal phosphoric acid and sodium fluoride. The commercial or technical definition, you note, is that MFP is a sodium or salt-containing phosphate obtained by neutralizing phosphoric acid. It is your conclusion, therefore, that the compound is most specifically provided for in item 421.16, TSUS.

It is Customs view that Headnote 1, Part 2(c), Schedule 4, describes the method of classification of inorganic compounds, such as the one in issue, and states that inorganic compounds are to be classified according to the alphabetical listing of cations. Since sodium is a cation but the monoflurophosphate anion is not a true phosphate anion, the most specific classification in the tariff would be item 421.62, TSUS.

If you have any additional evidence to submit in this matter, we would be happy to consider it.

Sincerely,

(Signed) Arthur P. Schifflin

District Director of Customs
Baltimore, Maryland 21202

Dear Sir:

Re: Decision on Application For Further Review of Protest #1303-3-000354
Classification of Reclaimed Red Phosphor

The material is referred to as red phosphor and it is used in the manufacture of color television tubes. This phosphor in the form of red, green and blue "dots" or "slots" is applied to the face (panel) of the picture tube. When the electron beams strike the "dots" they luminesce, creating a television picture. In use, the red phosphor is mixed with polyvinyl alcohol solution to form a slurry. The slurry is applied to the panel of the picture tube, and the portion which does not adhere to the panel in the form of "dots" is recovered. The recovered slurry is reused until such time as it becomes excessively contaminated and is no longer suitable for use in the processing.

At this point, the contaminated red phospher is recovered through a drying process from the slurry. The reclaimed red phosphor can not be reused because of the impurities and is exported to the U.S. where it is subjected to a manufacturing procedure to convert contaminated phosphor into virgin phosphor.

The steps in the coversion are essentially:

1) Dissolution of the imported contaminated red phosphor in nitric acid to form yttrium/europium nitrates;

2) Precipitation of the nitrates with oxalic acid to form yttrium/europium oxides;

3) Calcination of the oxalates to form the mixed oxides of yttrium and europium;

4) Adding appropriate fluxes to the mixed oxides and firing at a high temperature to form red phosphor;

5) Acid washing followed by water washing to remove the by-products of the washes;

6) The washed and dried product is virgin red phosphor.

E14

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC

The issue is whether the imported reclaimed material is classifiable as a mixture of two or more inorganic compounds in item 423.96, Tariff Schedules of the United States (TSUS), or under the provision for waste and scrap in item 793.00, TSUS.

One of the definitions of "waste" for tariff purposes includes refuse resulting from a manufacturing process which is commercially unfit for the purposes for which the original material was suitable without remanufacture. Customs has ruled that material which is no longer suitable for its original purpose without remedial processing is a waste.

Inasmuch as the reclaimed red phosphor in this case must undergo extensive reprocessing subsequent to importation before it can be used for its original purpose, it is concluded that the need for such processing establishes the reclaimed material as a waste for tariff purposes.

You should allow the protest in full. A copy of the decision should be furnished to the protestant with the Form 19 Notice of Action.

Sincerly,

(Signed) Arthur P. Schifflin

CLA-2 CO:R:CV:G
074326 JH

Dear

This is in reference to your letter of July 19, 1984, concerning the Customs decisions on the classification of certain products known as Aqualic CA, Aqua Keep, Sanwet IM-1000, (073907, 073908, 074109).

In regard to the decision on Aqua Keep, in the original submission there was no mention of free carboxylic acid groups being present; rather the product was described as a sodium salt of polyacrylic acid. Now it is indicated that only part of the carboxylic acid groups existed in the form of the sodium salt. Following Headnote 1, Part 2D, Schedule 4, concerning the classification of organic compounds according to functional groups, as the compound might be considered both a carboxylic acid and a sodium salt of a carboxylic acid, since the acid functional group is listed first, Aqua Keep is classifiable in item 425.99, other acids, and dutiable at 4.9 percent ad valorem.

In the previous decisions, based on the information supplied, both Aqualic CA and Sanwet IM-1000 were classified as mixtures of two or more organic compounds in item 430.20, TSUS, with duty assessed at the highest component rate, which would be for item 425.99.

It is now contended that both Aqualic CA and Sanwet 1000 are compounds and not mixtures, as defined in Headnote 2(a), Schedule 4, TSUS; and that because of functional groups, Aqualic CA would be classifiable as a carboxylic acid in 425.99, and Sanwet IM-1000 as an acyclic amide in item 425.22, TSUS.

However, it is still believed that these two products are mixtures. Each is reasonably complex polymer and such polymers are seldom, if ever, homogeneous. This refers to the end-product polymer molecules and does not concern the small amounts of unreacted starting materials which are probably also present. Complex polymer molecules typically vary in the amount of cross-linking, in the order and number of each type of repeating unit and so forth. Since each variation in molecular arrangement constitutes a different chemical compound, it is concluded they are mixtures; and we, therefore, adhere to the previous decision on these two products.

F2

Sincerely,

(Signed) Arthur P. Schifflin

Mr. Daniel M. Zibman
Bureau of Domestic and International
Commerce
Department of Commerce
454 Forum Building
Harrisburg, Pennsylvania 17120

Dear Mr. Zibman:

You ask for the dutiable status of certain animal feed additives from West Germany.

The classification and rates of duty are as follows:

Commodity	TSUS Item	Rate of Duty
Magnesium (Sulfate)	419.38	3.4 percent ad valorem
Choline Chloride	439.50	3.7 percent ad valorem
Iron Sulfate	418.92	Free
Calcium-Chloride- crude	418.16	Free
other	418.18	4.2 percent ad valorem
Cornstarch	132.55	0.55 percent per lb.

We are not familiar with the product "vitamin-premixing 439/4 & 3," so we are not able to give you a decision on this.

Enclosed is a copy of our publication "Importing to the United States" which I am sure will answer many of the questions you may have on importing. Also enclosed is a leaflet which explains how to obtain an administrative determination on the classification of merchandise.

Sincerely,

4 MAR 1985

CLA-2:CO:R:CV:G
074920 TLL
810255

Mr. Jim Conti
15641 Chemical Lane
Suite C
Huntington Beach, California 92649

Dear Mr. Conti:

Your letter of July 5, 1984, requesting a tariff classification ruling on 3 pair of shorts, styles A, B, and C has been forwarded to this office for reply.

Styles A, B, and C have the following features:

1. Shell - woven fabric of 65 percent polyester and 35 percent cotton.

2. Liner - full support knit fabric.

3. Waist - elasticized with functional drawstring.

4. Rear patch pocket.

5. No key or coin pocket.

6. Side seam stripes (3/8 of an inch in width).

7. A and B are made from Poplin fabric.

8. C is made from Chintz fabric.

9. B and C have side seam pockets.

In Headquarters ruling 073387, dated February 17, 1984, we provided criteria for making the distinction between swimwear and shorts. In that ruling, we stated:

> In determining whether a garment falls within the purview of swimwear and would not, therefore, be classified as shorts, if a question concerning the commercial identity of the garment arises, Customs will look to the following features.

F4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(1) Fabric from which the garment is made. Fabrics such as denims, corduroys, and twills are usually heavier fabrics than used in normal swimwear. Such fabrics are bulkier and absorb more water than is usually desirable for swimwear.

(2) Side inserted pockets are usually a characteristic of shorts and not swimwear. In addition, the extra fabric required adds to the water absorbancy of the garment.

(3) Cotton liners, again because of increased water absorbancy, are more often found on multipurpose or running shorts.

(4) A fly front is not a normal feature on swimwear.

The weight and absorbancy of the fabric of each garment in question is the primary criterion and may be determinative by itself. None of the other features are necessarily determinative by themselves, or even in combination. Each article of apparel should be considered as a whole and, due to the specific nature of swimwear, if a garment is not readily identifiable as swimwear, it is a multipurpose garment and should be classified as shorts.

Applying that criteria to the garments you submitted, we find the tariff classification to be determined by the presence (or lack thereof) of the side inserted pockets. In this regard, style A does not contain any side inserted pockets. Consequently, we believe the chief use of style A is for swimwear and we would classify it in item 379.9570, Tariff Schedules of the United States (TSUS), with duty at the rate of 19 cents per lb. plus 27.5 percent ad valorem. The category designation is 659.

Styles B and C are shorts that have three open pockets including two which are side inserted. As garments with this feature have never been ruled to be swimwear by our office, and as we believe the styling of garments B and C, with multiple open pockets, allows for use as shorts, we do not believe styles B and C would be chiefly used as swimwear. Additionally, styles B and C are not readily identified as swimwear and therefore would be considered as shorts. Accordingly, we would classify styles B and C in item 379.9585. The category designation is 647.

Style A is subject to a visa requirement and style B and C are subject to a visa requirement and quota restraint because they are products of Taiwan.

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

FS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Import restraints are imposed by the U.S. Customs Service under directives of the Committee for the Implementation of Textile Agreements, U.S. Department of Commerce, Washington, D.C. 20230. Further advice or information pertaining to those agreements may be obtained from the Chairman of the committee.

As requested, your samples are returned herewith.

Re: Classification of malleable cast-iron fittings: determination as to operations which are not subsequent to the casting process

Dear Sir:

This letter is to advise you that certain machining operations and straightening operations do not constitute an advancement in condition subsequent to the casting process for certain malleable cast-iron fittings.

ISSUE:

Whether certain cleaning, grinding, and straightening processes, performed after annealing in order to eliminate warpage resulting from the annealing and to condition the surface and to remove excrescences from castings, are properly considered to be processes which do not constitute an advancement subsequent to the casting process?

BACKGROUND:

In Victaulic Co. of America v. United States, Court No. 79-5-00283, the issue was presented as to whether cleaning, grinding, and straightening, performed after an annealing process, were an advancement in condition by operations or processing subsequent to the casting process for purposes of classification of certain malleable cast-iron fittings under item 610.74, Tariff Schedules of the United States (TSUS).

F8

Based on the statements of technical experts and the legal arguments at issue, the government stipulated in the above case that the named operations were not an advancement after the casting process.

In ORR Ruling 796-68 (letter dated November 4, 1968, file TC 423.371 AS), concerning similar merchandise, we held that malleable castings were advanced subsequent to the casting process by machining operations which, although not a fine grinding, consisted of the removal of burrs, fins, gates, sprues, or risers. The castings were ready for use in their condition as imported. This ruling was affirmed in Headquarters letters of February 25, 1972, and April 18, 1978 (files 012581 and 056405, respectively).

There are other rulings concerning processing operations which constitute an advancement subsequent to the casting process. See, for example, our letter of July 9, 1971, file 011736 (removal of burrs, fins, gates, sprues, and risers from malleable cast-iron Klambon-type couplings).

LAW AND ANALYSIS:

The tariff provisions are specific. They refer to fittings which are cast-iron and malleable. The current provisions are contained in item 610.70 and 610.74, TSUS. The types of processing that determine which provision is applicable to a malleable cast-iron fitting are those operations or processes that are subsequent to the casting process (emphasis supplied). Similar language is contained in the provisions for forgings (currently items 606.71 and

075315

F9

606.73) in which the operative language is "not machined, not tooled, and not otherwise processed after forging" (emphasis added). Although there is no judicial precedent on those types of processes that are subsequent to casting, there are judicial decisions on the issue concerning forgings. E. Dillingham, Inc. v. United States, 61 Cust. Ct. 33, C.D. 3522 (1968); J. Gerber & Co., Inc. v. United States, 62 Cust. Ct. 368, C.D. 3773 (1969); and W. R. Pilbin & Co., Inc. v. United States, 63 Cust. Ct. 200, C.D. 3897 (1969). Although these decisions are not controlling, they are instructive in view of the fact that trimming, cleaning, and deburring were not considered processes subsequent to forging.

The casting process for malleable cast-iron fittings includes more than just the pouring of castiron into a mold. If the term "malleable cast-iron fitting" is to have any commercial significance, it must include fittings that have been made malleable by annealing after being cast. A fitting, although designed to be made malleable by annealing, cannot be classified as such if it is not malleable at the time of importation. Therefore, annealing is not an advancement of a malleable cast-iron fitting by a process subsequent to the casting process.

With regard to steel castings, the removal of risers and gates and surface imperfections is considered to be part of the casting process even when performed after heat treatment. They are surface finishing operations (chipping, grinding, sandblasting, and related operations). See The Making,

075215

F11

Shaping and Treating of Steel, "Castings - Steel and Iron," 8th edition, United States Steel Corporation, ed. Harold E. McGannon, at page 1014. Based on additional information from the industry, the casting process for iron castings is similar. That is, the finishing of a casting by grinding or machining to remove surface imperfections and excrescences, or to straighten after a heat treatment process is not an operation that is subsequent to the casting process.

We distinguish, however, those operations that constitute drilling, threading, galvanizing or electroplating, or, possibly, certain types of machining to form specialized shapes or joints. These operations are considered to be subsequent to the casting process. Headnote 1, Part 2 of Schedule 6, TSUS, is noted, and any operation named in that headnote and which constitutes an operation subsequent to casting, would be considered an advancement for purposes of items 610.70 and 610.74, TSUS.

HOLDING:

Cleaning and grinding to remove rough edges, excrescences, sprues, risers, burrs, and similar imperfections resulting from the casting process, are incidental to the casting process; similarly, straightening to correct deformation from annealing of a casting is incidental to the casting process. These operations, therefore, are part of

075215

the casting process and do not constitute an advancement of a malleable cast-iron fitting by operations or processes subsequent to the casting process for purposes of tariff classification.

However, any machining (drilling, surface shaping, threading), galvanizing, or similar finishing operation would constitute, for tariff purposes, an advancement "in condition by operations or processes subsequent to the casting process." The terms of limitation in items 610.70 and 610.74, TSUS, create a specific context against which Headnote 1, Part 2 of Schedule 6, TSUS, must be read.

EFFECT ON OTHER RULINGS:

This ruling revokes prior letter rulings dated November 4, 1968 (file TC 423.371 AS; ORR Ruling 736-68); letter ruling of February 25, 1972 (file 012581); letter ruling of April 18, 1978 (file 056405); and letter ruling of July 9, 1971 (file 011736); and any other ruling that is inconsistent with the specific holding of this decision.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

REFER TO

075466

CLA-2 CO:R:CV:G
075466 EMS

Louis S. Schoichet, Esquire
Siegel, Mandell & Davidson, P.C.
One Whitehall Street
New York, New York 10004

Dear Mr. Schoichet:

This is in response to your letter dated December 27, 1984, requesting on behalf of Avon Products reconsideration of a New York ruling dated October 5, 1984, file No. 810275, which found that certain empty plastic containers for makeup manufactured in Holland were classifiable as luggage in item 706.6240, Tariff Schedules of the United States Annotated (TSUSA). You presented additional arguments concerning the classification of this merchandise in submissions dated October 28, 1985 and December 4, 1985. In addition, a conference to discuss this matter was held on November 12, 1985. A sample filled with makeup, as well as a an empty one, and a brochure containing advertisement of this merchandise were provided.

The merchandise in question consists of an empty rigid plastic container which will be imported to be filled with makeup products by Avon. It will contain 8 eye shadows, 2 brush-on blushers, 1 eye liner pencil, 1 mascara plus applicators and a pop-up mirror. The container is advertised in Avon's brochure as "Ultra Wear Colors-to-Go Makeup Kit" and is described as measuring 4 1/4" x 2 3/4" x 1 3/4" when closed and 10" x 4 1/2" x 1" when open. The advertising claims that this merchandise is "great on a trip, at the office or on a dressing table." The cosmetic kit is not refillable.

You claim that this merchandise is not classifiable as luggage but should be considered a container chiefly used for the packing, transporting or marketing of merchandise classifiable in item 772.20, Tariff Schedules of the United States (TSUS) or alternatively as a household article not specially provided for, in item 772.15, TSUS. You also contend that this merchandise is not appropriately considered a flat good for tariff classification purposes since it is too large to be considered similar to the exemplars of flat goods enumerated in Schedule 7, Part 1, Subpart D, Headnote 2(c).

We agree with you that this merchandise should not be considered luggage for tariff classification purposes. Schedule

F13

7, Part 1, Subpart D, Headnote 2(a),TSUS, defines luggage as follows:

2. For the purposes of the tariff schedules--

(a) the term "luggage" covers -

(i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffel bags, and like articles designed to contain clothing or other personal effects during travel; and

(ii) brief cases, portfolios, schoolbags, photographic equipment bags, golf bags, camera cases, binocular cases, gun cases, occupational luggage cases (physicians', sample, etc.), and like containers and cases designed to be carried with a person, except handbags as defined herein.

The merchandise in question is not an article named in section (i) or (ii) of the luggage headnotes. Furthermore, while the makeup kit is advertised as "great on a trip" it is our view that it is not primarily used as a travel article. Rather, we believe that this merchandise is more appropriately classifiable as a flat good. Schedule 7, Part 1, Subpart D, Headnote 2(c), TSUS, provides that:

(a) the term "flat goods" covers small flatwares designed to be carried on the person, such as banknote cases, billcases, billfolds, bill purses, bill rolls, card cases, change purses, cigarette cases, coin purses, coin holders, compacts, currency cases, key cases, letter cases, license cases, money cases, pass cases, passport cases, powder cases, spectacle cases, stamp cases, vanity cases, tobacco pouches and similar articles.

It is our view that this merchandise is more similar to the "compact" referred to in Headnote 2(c) than to the travel goods contemplated by Headnote 2(a). A compact is defined in Webster's New World Dictionary (2d ed.1974) as "a small cosmetic case,

075466

F14

usually containing face powder and a mirror." This merchandise is both small and used to contain cosmetics. It easily fits into a handbag indicating portability. In fact, Avon's description of this merchandise as "Ultra Wear Color-to-Go Makeup Kit" suggests that it is designed to be carried on the person. Thus, we cannot agree with your contention that this merchandise is too bulky to be carried on the person and to be considered a flat good.

Contrary to your contention, we do not believe that this merchandise is more specifically described as a container, of rubber or plastics, chiefly used for the packing, transporting or marketing of merchandise in item 772.20, TSUS, or as a household article in item 772.15, TSUS. While we must agree that it is a container, it is our view that it is not chiefly used for the packing, transporting or marketing of merchandise. Powder boxes, rouge containers and jars are examples of cosmetic containers ruled to be classifiable in item 772.20, TSUS. See Headquarters Ruling Letter (HRL) dated August 2, 1979, file No. 062145. Additionally, since we have concluded that this merchandise is specifically described as a small flat good designed to be carried on the person, it is not classifiable as a household article not specially provided for in item 772.15, TSUS.

In view of the foregoing, this merchandise is classifiable under the provision for flat goods in item 706.61, TSUS, dutiable at the rate of 20 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

U.S. CUSTOMS SERVICE

WASHINGTON

NOV - 8 1985

REFER TO

CLA-2:CO:R:CV:G
075485 JLV

075485

Mr. Art Bornstein
Associated Forwarders, Inc.
66 Coronado Avenue
Kenner, Louisiana 70062

Dear Mr. Bornstein:

In your letter of December 20, 1984, you requested a ruling on the tariff classification and country of origin marking requirements for a product described as a flange and threaded fitting (or threaded closure device).

The merchandise in issue is a two-piece closure for containers. One component consists of a flange with an internal threading. The second piece consists of an externally threaded plug or closure to be used with the flange. Each piece is fitted with a rubber gasket. You state that the two-piece closure is to be used as a drain, closure, or vent in numerous types of containers, such as industrial tanks or tubs, and commercial-size lobster or crawfish pots.

The imported closures are not fittings for purposes of classification under the provision for pipe and tube fittings of iron or steel in Subpart B of Part 2, Schedule 6, Tariff Schedules of the United States (TSUS). They are not used to join lengths of pipe, change direction of a pipe system, provide a means of branching a pipe system, or to close the end of a pipe system.

In a letter ruling abstracted as T.D. 56237(15) a similar closure for steel drums was classified under the provision for other articles of iron or steel, not specially provided for, in item 657.20, TSUS (currently item 657.25).

Although the merchandise in issue is imported as a "two-piece" closure, it is not classifiable as an entirety for tariff purposes. The court in Hancock Gross Mfg., Inc. v. United States, 60 Cust. Ct. 558, C.D. 3459 (1968) held that strainers and bases for sinks were not entireties because they performed separate functions. In this case the flange performs a function by providing a fitting or base for either a plug or a valve or a vent. The plug functions strictly as a plug and may be used with the flange or possibly with other fittings or bases.

G2

However, for tariff purposes, the flange component and the plug component are both classifiable under the same tariff provision. Each of the imported components is classified under the provision for articles of iron or steel, not specially provided for, not coated or plated with precious metal, in item 657.25, TSUS.

In view of the fact that these closure devices are not pipe or tube fittings within the provisions for fittings of iron or steel in Schedule 6, Part 2, Subpart B, they are not subject to the marking requirements under Section 207 of the Trade and Tariff Act of 1984. Further, the closure devices are also excepted from country of origin marking requirements. These closures are to be processed in the United States by an importer or for his account in such a way that they will become part of a container or other article. Therefore, pursuant to Section 134.22(a), Customs Regulations (19 CFR 134.22(a)), the outermost container or holder in which the article ordinarily reaches the ultimate purchaser shall be marked with the country of origin of the article.

Sincerely,

Arthur P. Schaffner

Mr. John Klingman
Compagnie d' Affretement
et de Transport U.S.A., Inc.
74 Trinity Place
New York, New York 10006

Dear Mr. Klingman:

In your letter of November 30, 1984, you requested a ruling on the tariff classification of a B70 Renault cab chassis from France.

The B70 Renault cab chassis will be fully driveable at the time of importation. It will be used to produce both commercial and recreational or passenger vehicles. According to the technical information submitted by you, the two models of the B70 cab chassis have a gross vehicle weight rating (GVWR) of 3.5 tons (metric) and 4.5 tons. By using a conversion of 2.208, the following weights for gross vehicle rating apply: 7,728 pounds and 9,936 pounds. Therefore, the GVWR for each of the models is less than 10,000 pounds. The particular cab chassis in issue is also called a cutaway chassis. The purpose of a cutaway cab chassis is to allow for completion into a walk-through van or for the addition of a separate van body behind the cab. The cab in this case is usually mounted directly over the engine. Furthermore, as stated by you in your request, the cab chassis will be used to manufacture cargo vans, passenger vans, and motor homes.

The intended use of the cab chassis is not controlling. Therefore, although the cab chassis will be used in the production of various types of vehicles, it is classifiable under the provision which describes the class or kind of article in which it is included. The competing provisions, in this case, do not include actual use provisions. The B70 cab chassis, in its condition as imported, is a truck cab chassis. It is of the class or kind of cab chassis that is chiefly used in the production of trucks.

RETURN TO THE

G4

The B70 cab chassis is a lightweight cab chassis for purposes of tariff classification. Therefore, pursuant to T.D. 80-137, and the court's decision in Toyota Motor Sales, U.S.A., Inc. v. United States, 7 CIT ___, 585 F. Supp. 649 (1984), affirmed at Appeal No. 84-1326 (CAFC, 1985), which upheld both the change of practice and the classification of lightweight cab chassis in item 692.02, Tariff Schedules of the United States (TSUS), the B70 cab chassis is classified as an unfinished truck in item 692.02, TSUS.

Sincerely,

B.7+

Portland, Oregon 97209

Re: Decision on Protest and Application for Further Review No. 2904-4-000090, Dated June 26, 1984

Dear Sir:

The above protest and application for further review were timely filed against your action in classifying certain coupling links under the provision for articles of iron or steel, not coated or plated with precious metal, in item 657.25, Tariff Schedules of the United States (TSUS). The merchandise was entered on entry No. 84-408432-1, dated January 31, 1984, liquidated on May 4, 1984. This ruling is our decision on the classification issue.

FACTS:

Although the records concerning the importation of the merchandise under protest are ambiguous, the supporting documentation submitted by the importer and accepted by you is sufficient to identify the merchandise as BS alloy connecting links, part No. 05104. This particular link is a two-piece link with a pin or shank. It is approximately 5/8 inch in diameter and weighs approximately 2.7 pounds each. This description is not disputed by Customs.

The protestant claims that the coupling links are properly classifiable under item 664.10, TSUS, as parts of overhead traveling cranes.

ISSUE:

Are the coupling links classifiable as parts of overhead traveling cranes, or are they more specifically provided for under another tariff provision?

G6

LAW AND ANALYSIS:

Chain slings are classifiable as chains. Headquarters ruling letter dated June 1, 1979 (file 057895), is on point. A coupling link is a chain part which is used as a connecting device to attach chain sections. Under the facts submitted in the case, the coupling links are designed for use with 5/8 inch alloy chain in the assembly of chain slings.

The tariff classification of chain, or chains, the links of which are of stock essentially round in cross-section, and parts thereof, of 3/8 inch or more but under 3/4 inch in diameter, is item 652.30, TSUS. Because the coupling links in issue are parts of chains or chain slings, and because chains are specifically provided for, classification as part of a chain sling is more specific than as part of lifting equipment. Border Brokerage Co., Inc. v. United States, 64 Cust. Ct. 458, C.D. 4020 (1970).

HOLDING:

The coupling links are classifiable as parts of chain in item 652.30, TSUS. This classification is not the claimed provision nor the assessed provision. Because the rate of duty under the correct classification is less than the rate under either the claimed provision (item 664.10) or the assessed provision (item 657.25), you should allow the protest. A copy of this decision should be given to the protestant when notice of action is given on Customs Form 19.

Sincerely,

Arthur P. Schaffer
for Harvey B. Fox
Director, Classification
and Value Division

075584

District Director of Customs
2 India Street
Boston, Massachusetts 02109

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 04011000540

The above-captioned protest and application for further review were filed against the tariff classification of ophthalmogical measuring apparatus which was the subject of entry No. 81-348406 filed in 1981. The merchandise is a product of Switzerland. Our decision follows:

ISSUE:

Duty for the merchandise in question was liquidated at the 1981 column 1 rate of 21.3 percent ad valorem for optical ophthalmic instruments and parts in item 709.05, Tariff Schedules of the United States (TSUS). It is claimed that the 1981 column 1 rate of 5.6 percent ad valorem for electro-medical apparatus in item 707.17, TSUS, is applicable, or, in the alternative, that the 1981 column 1 rate of 15.5 percent ad valorem for electro-surgical apparatus in item 717.15 is applicable. The main issue thereby presented is whether the imported merchandise qualifies as optical goods within the definition in Headnote 3, Part 2, Schedule 7, TSUS.

FACTS:

The imported merchandise consists of an incomplete station or module of a dual station ophthalmic measuring system which

68

in its complete configuration is known as the Octopus Perimeter. This apparatus is primarily used to define the field of peripheral vision and to identify variations within the peripheral boundaries. Using more traditional methods, apparatus consisting of a perimeter, projector and telescope, field of vision is manually determined and plotted. The Octopus is a totally automated system substituting a television camera for the telescope and providing fields in computer graphics form together with printouts of other diagnostic analyses derived from computer programming.

The station consisting of the control console, computer and CRT monitor is not included in the importation. The station including the attached patient chair, projection mirrors, perimeter, referred to as a cupola, and associated background illumination components, servomechanisms, etc., constitutes the imported merchandise, except the TV camera unit, and also presumably the focusing optics, are added after importation. Counsel for the protestant has submitted numerous articles, monographs and similar materials relating to perimetry.

LAW AND ANALYSIS:

Headnote 3, Part 2, Schedule 7, defines "optical instruments" as those "which incorporate one or more optical elements" not used "solely for viewing a scale or for some

875584

other subsidiary purpose." It would appear that more traditional permimeter systems would qualify as optical goods under that definition by virtue, among others, of the optics in the viewing telescope. See, for example, our decisions of January 4, 1978, file No. 054679; February 14, 1980, file No. 061873; and April 24, 1968, file no longer available. See also the Tariff Classification Study, Explanatory Materials, C.I.E. 1/64, Vol. 2, pp. 544 and 545.

The fact that the imported article is merely part of a larger system would not prevent it from being regarded as optical apparatus in its own right. See Norman G. Jensen, Inc. v. United States, 77 Cust. Ct. 9, C.D. 4668 (1976); Rank Precision Industries, Inc. v. United States, 85 Cust. Ct. 34, C.D. 4866 (1980), rev'd on other grounds, 68 CCPA 78, C.A.D. 1269 (1981). Nor can lack of optical elements in an article's condition as imported be a basis for avoiding an optical goods classification if it constitutes an optical instrument once the missing elements are installed in it. Swift Instruments, Inc. v. United States, 4 CIT 88 (1982), aff'd, 714 F. 2d 161 (Fed. Cir. 1983). See also General Headnote 10(h), TSUS. Therefore, the main issue involved in this protest is whether the optical elements serve more than a subsidiary purpose and, if so, whether they meet the so-called fourth Engis requirement that optical goods must aid vision. For specifics regarding

075584

G10

the Engis criteria see Engis Equipment Company v. United States, 62 Cust. Ct. 29, C.D. 3670 (1969).

Aside from any optical elements which may be present in the general illumination system for the apparatus, an optical system consisting of mirrors exists for projecting a spot or other image into the perimeter. Those mirrors, together with a lens system, presumably constitute the system for determining the position of the spots on the patient's visual periphery or other pertinent location and for other observations regarding the examined eye. Our previous decisions, as indicated above, suggest that in manual perimeter systems, the analogous projection and focusing elements are more than subsidiary and impart an optical characterization to the equipment of which they are a part.

The main claim here, then, is that the electronic components together with programs and servomechanisms associated with automatic operation, when combined with the optical elements, make the total apparatus more than optical. However, it is our view that the very purpose of Headnote 3 was to prevent such a result and to provide for the accommodation of articles which combine electrical and optical features in the new specific breakouts for them in the TSUS, thereby altering the optical goods criteria in the old cases at least to that extent. In this connection,

075584

G11

in United States v. Ataka America, Inc., 64 CCPA 60, C.A.D. 1184 (1977), it was held, in effect, that merchandise could not be optical and other than optical at the same time.

It should be further noted that a major component in the completed apparatus is a TV camera, and a major portion of the optics serve as the lens system for that camera. The fact that cameras of various types are specifically provided for in the TSUS does not alter the fact that they are, and have always been regarded as, optical instruments with their lenses constituting the dominant or primary component. In our opinion, the instant lenses are not reduced to a subsidiary status merely because the total apparatus is more than a camera. Taking this into consideration together with the clearly optical nature of predecessor manual perimeter equipment and the intention to provide in the TSUS updated provisions for optical goods embodying modern applications combining optical and electrical technolgies, we are of the opinion the optics in the instant apparatus are more than subsidiary.

It has been our further view that such combinations meet the fourth Engis criterion if they merely aid vision indirectly. This position has reference to the specific acknowledgment of the "indirect" aiding of vision in United States v. J. Bliss & Co., 29 Treas. Dec. 717, 724, T.D. 35980 (1915). In fact,

015584

G12

the main feature which consititutes indirect aiding of vision as opposed to direct aiding of vision with respect to the instant merchandise is that a TV camera and CRT are between the eye and the lens. It is further our opinion that the automatic production of visual field diagrams in computer graphics form also indirectly aid vision by being a substitute for the diagrams which would otherwise have to be plotted manually from actual optical eyepiece observations.

Additionally, concluding that the instant appartatus was not optical because vision was not directly aided would require holding, in effect, that the TV camera which is part of the apparatus was not optical. In any case, it is our opinion that the image observed on the CRT for the instant apparatus is no less a direct observation than the image also produced by electronic means in electron microscopes which are clearly provided for as optical instruments in item 708.78, TSUS. Therefore, it is our view that the production of images in computer graphics form and on a CRT monitor satisfy the fourth Engis aiding-vision criterion claimed to be applicable here.

With respect to the claim that the merchandise is electro-surgical apparatus, it is our understanding that position is no longer being pressed.

075584

G13

075584

HOLDING:

For the foregoing reasons, we find that your classification of the Octopus Perimeter component in its incomplete form under the provision for optical ophthalmic instruments and parts in item 709.05, TSUS, was correct. Therefore, you are instructed to deny the protest in full provided the patient chair, chair motor, and mounting rack for both were not included in the importation. If the latter were included, their separate value should be determined and they should be separately classified under the provision for mechanical clinical furniture in item 727.02, TSUS, which required a column 1 rate of 5.1 percent ad valorem, and the protest should be denied except to the extent any such separate classification would result in a partial allowance. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

Arthur P. Schaffner

Dear

Your letter of October 11, 1984, concerns the dutiable status of methanol shipped from Canada through the United States to a destination in Canada.

It is stated that the methanol is shipped from Kitimat, British Columbia, to Portland, Oregon, and then to Vancouver, British Columbia.

In answer to your questions, if the methanol is transshipped from one point in Canada to another through the United States, the law provides that this is not an importation, if the regulations are complied with. It is suggested that you contact Customs officials at Portland for further information. If butyl alcohols are added to the methanol in the United States, it would be dutiable as a mixture.

While under the tariff law, exemptions from duty are not generally available, it might be noted that methanol imported into the United States only for use in producing synthetic natural gas or for direct use as a fuel is free of duty in item 427.96, TSUS. Methanol imported for other purposes is classifiable in item 427.97, TSUS, and dutiable at 18.6 percent ad valorem.

Sincerely,

(Signed) Arthur P. Schifflin

Dear

Your letter of February 14, 1985, concerns the classification of a certain baddeleyite which was the subject of a stipulation entered into in the case of Corning Glass Works v. United States, Civil Action No. 81-8-01094.

The processing of the ore is essentially as follows: Copper-rich ore is blasted out of the mine and crushed; crushed ore is subjected to a flotation process, in which the copper ore is floated off, with the residue subjected to a water and magnetic separations. After further air blasting and aqueous separation, a concentration rich in zirconium oxide and a uranium-thorium complex results. The baddeleyite (zirconium oxide) is then separated from the uranium-thorium materials. Further processing of the uranium-thorium minerals by leaching with nitric acid, which solubilizes the uranium-thorium, leaves a residue of 90-95 percent zirconium oxide. This product is then dried and blended with the other baddeleyite earlier produced to obtain a baddeleyite of 98-99 percent zirconium oxide.

The zirconium oxide resulting from the series of processing steps outlined above is not deemed a waste, since although perhaps not the primary product, it is, nonetheless, deemed a desired product.

In view of the facts in this case, the method of production, which involved chemical extraction, its high purity, and that it is known in the trade as zirconium oxide, it is concluded that the baddeleyite produced in this manner and of this purity, is classifiable as zirconium oxide in item 422.80, TSUS. This conclusion is based on the facts in this case and not intended as a general rule for classification of material of this type.

Sincerely,

[redacted] Arthur P. Schifflin

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

15 MAY 1985

REFER TO
CLA-2:CO:R:CV:G
075811 PR

Andrew E. Mishkin, Esq.
Beveridge & Diamond, P.C.
1333 New Hampshire Ave., NW.
Washington, D.C. 20036

Dear Mr. Mishkin:

This is in reference to your letters of March 11 and 12, 1985, on behalf of U.S.A. Peninsular, Inc., concerning the country of origin of certain sweaters.

In the first situation presented, a front panel of a sweater is knit in Hong Kong, the back and sleeve panels are knit in China, and the assembly and finishing operations are done in the United Kingdom. In order to properly respond to this question, additional information should be submitted. In this regard, your attention is directed to Section 12.130, Customs Regulations, published March 5, 1985, 50 F. R. 8710. See specifically Section (d)(2).

The other three factual situations presented are connected in that only two countries or territories are involved in the production of the subject sweaters and in each instance all the panels of the sweaters are assembled and the completed garment is finished in Hong Kong. The three situations are as follows:

1. front panel knit in Hong Kong and back and sleeve panels knit in China.

2. back panel knit in Hong Kong and front and sleeve panels knit in China.

3. long sleeve panels knit in Hong Kong and front and back panels knit in China.

Without samples and more detailed descriptions of exactly what is done in each country, we are unable to definitively respond to your questions. In determining the country of origin of sweaters, the parts of which are knit in two countries with one of those countries also being the assembling country, Customs will apply the criteria set out in the final textile rules

075811

PUBLIC _____ RELEASED TO THE

of origin, section 12.130, Customs Regulations (19 C.R.F. 12.130), effective April 4, 1985. Utilizing that criteria, we believe that a substantial portion of the garment must be knit in the assembling country for that country to be the country of origin of the sweater.

It is Customs' view that the knitting in the assembling country of a sweater's long sleeves and either the front or back (whichever gives the garment its distinctive character) would clearly make the assembling country the country of origin. In most cases, the knitting of two of the garment's major portions — e.g. long sleeves, the front, or the back -- in the assembling country will make that country the country of origin. If, of the major portions, only one is knit in the assembling country, then the origin determinations must be made on a case by base basis. In this regard, Customs will usually focus its attention on either (1) the front panel (or panels) on which patterns, fancy work, or other work or features of unusual complexity may be found, or (2) both long sleeves, to the extent they impart a particular visual characteristic to the garment (e.g., raglan sleeves). In some instances, the back panel may also be considered if the back is determinative of the character of the garment. Thus, for example, where only long sleeves are knit in the assembling country and are combined with a patterned or fancy front (knit elsewhere) which provides the garment with its main visual characteristic, then the assembling country will normally not be deemed to be the country of origin of the sweater.

In the case of sweaters, the principal portions of which consist of identical fabric with nothing that particularly distinguishes one portion from another, then the assembling country, following the general rule previously stated, will usually be the country of origin if two of the principal portions are knit there. Situations in which less is done are impossible to address without a detailed statement of the applicable facts. Absent such facts, our reaction is that the knitting of only one of the principal portions of such a sweater in the assembling country normally will not result in that country being considered the country of origin unless Customs is presented with evidence establishing that the portion knit there is clearly more significant than the others, considering its complexity, the time and technology involved in its construction, and any other factors which may be relevant.

Sincerely,

Harvey B. Fox

075847 c

075847

31 DEC 1985

Mitchell R. Scher, Esq.
Grunfeld, Desiderio, Lebowitz & Silverman
Two World Trade Center
Suite 2238
New York, New York 10048-0654

Dear Mr. Scher:

This is in response to your letter dated March 1, 1985, requesting a tariff classification ruling on a nylon drawstring bag. You do not indicate the country of origin. However, the sample that was provided along with your request indicates that it was manufactured in China.

The sample is a nylon bag with a drawstring at the top. It measures approximately 7 inches high and 3-1/2 inches at the base and resembles a duffle type ditty bag. The bag has a padded interlining and a backing of man-made textile materials. However, it does not have a lining. You indicate in your letter that these bags will be used as packaging for Leggs pantyhose at the point of sale.

You contend that this merchandise is most appropriately classified as flat goods in item 706.3900, Tariff Schedules of the United States (TSUS). Schedule 7, Part 1, Subpart D, Headnote 2(c) states that:

> The term "flat goods" covers small flatwares designed to be carried on the person, such as banknote cases, bill cases, billfolds, bill purses, bill rolls, card cases, change purses, cigarette cases, coin purses, coin holders, compacts, currency cases, key cases, letter cases, license cases, powder cases, spectacle cases, stamp cases, vanity cases, tobacco pouches, and similar articles.

Thus, this headnote explains that the term "flat goods" covers "small flatwares designed to be carried on the person," and lists a number of exemplars that are commonly carried in this manner. It is our view that the instant merchandise is not the type of article which is designed to be carried on the person.

A1

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides that the term luggage covers:

> Travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling haversacks, duffle bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel.

The instant merchandise is in fact designed to contain clothing or other personal effects during travel. It is our observation that use of the nylon drawstring bag as a container for Leggs pantyhose is secondary to its primary use as a container for personal articles after removal of the pantyhose.

It is our opinion that this merchandise is properly classifiable under the provision for luggage of other textile materials in item 706.4152, TSUS, and dutiable at the rate of 20 percent ad valorem. The applicable textile quota category number is 670. If this merchandise is a product of Taiwan, it will be subject to textile quota restraints.

Sincerely,

Arthur P. Schifflin

Arthur P. Schifflin

Detroit, Michigan 48226-2568

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 38014001114

The above-captioned protest and application for further review were filed against your classification of merchandise containing optical fibers which was the subject of entry No. 84-644429 filed at the port of Detroit in 1984. The country of exportation was Canada. Our decision follows:

ISSUE:

The merchandise was entered under the former provision for mounted optical elements in item 708.29, Tariff Schedules of the United States (TSUS), which required a column 1 rate of duty of 13.5 percent ad valorem in 1984. The alternative 1984 rates claimed in the protest are 4.5 percent under the provision for electrical articles, not specially provided for (n.s.p.f.), in former item 688.43, TSUS, 8 percent under the provision for non-optical measuring instruments in item 711.88, TSUS, and 6.8 percent for non-optical electrical measuring, checking or analyzing instruments and apparatus in item 712.49, TSUS, or the foregoing rates as applicable under the parts portions of these provisions. The main issue raised in the protest is whether the various components imported with the optical fibers make them more than optical elements.

A9

FACTS:

The merchandise is invoiced as fiber optic illuminator cables with viewer ports and in 375 and 500 foot lengths. They are used to transmit diffracted light in various colors from a water level gage in a pressure vessel to a remote viewing station. Colored light which is allowed to pass from the gage through the cables illuminates the corresponding level indicators at the remote location.

LAW AND ANALYSIS:

The Customs Service has consistently regarded fiber optic cables and their mountings or fittings as optical goods. This position has been ratified by the telecommunications product breakouts in the Trade and Tariff Act of 1984, 98 Stat. 2949, which established the present specific provision for fiber optic cables whether or not mounted or with or without fittings in item 707.90, TSUS, without any changes in rates.

We do not agree that the ports imported with the merchandise make the cables more than optical elements. If not regarded as parts of the fittings or mountings for the cables, the ports could be regarded as separate optical elements in their own right subject to the same rate of duty. To permit one optical element to be the basis for considering another element as more than an optical element would be contrary to the principle of United States v. Ataka America, Inc., 64 CCPA 60, C.A.D. 1184 (1977). It was held in that matter than an article could not be optical and other than optical at the same time.

075869

A10

The alternative provisions claimed to be applicable here do not contemplate optical goods. With respect to the further claim that the merchandise is measuring apparatus, its main function is to view a gage remotely, and it is the viewed gage, not the viewing apparatus, that performs a measuring function.

HOLDING:

For the foregoing reasons, we find that your classification of the instant merchandise under the provision for mounted optical elements in former item 708.29, TSUS, is correct. Accordingly, you are instructed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

NOV 20 1985

REFER TO
CLA-2 CO:R:CV:G
075870 JAS

075870

District Director of Customs
610 S. Canal Street
Chicago, Illinois 60607

Dear Sir:

This is our decision on Application for Further Review of Protest No. 3901-4-001375, dated February 28, 1985, concerning certain basket drive pulleys from Taiwan.

FACTS:

Memoranda of law from counsel representing the protestant, dated December 19, 1984, and July 24, 1985, together with a blueprint sketch, describe Whirlpool part 359698, designated as a "pulley for basket drive," but also referred to as a clutch disc pulley.

From submitted literature on the standard Whirlpool washing machine, it appears that as the wash cycle ends a timer causes the spin solenoid to energize, resulting in a series of mechanical actions which cause the clutch to engage with the spinning drive pulley, the subject of this protest. At the end of the spin cycle the timer de-energizes the spin solenoid which causes a cam bar to move forward, thus raising the clutch shaft and the brake yoke. This action lifts the clutch plate from the pulley, thereby engaging the brakes to bring the spin basket to a stop.

Essentially, the spinning and braking action in the washing machine is accomplished, according to the literature, by three interrelated assemblies mounted on the spin tube. First, the spin drive pulley, the article presently under consideration, rests on the base flange of the spin tube but is not secured to the tube and rotates free any time the motor is

A12

running. Second, the clutch plate, which is secured to the spin tube, engages the drive surface of the pulley to make the spin basket rotate at high rpm, thus causing the water to drain away. Third, the brake assembly, consisting of two spring loaded brake drums and brake yoke, also secured to the spin tube, performs the braking function.

The instant entry was liquidated by Customs officers in Chicago under the provision for pulleys, shaft couplings, and parts thereof, in item 680.95, TSUS. Protestant's counsel maintains that the proper classification is under the provision for clutches and parts thereof, in item 681.21, TSUS, or, if the pulley function and clutching function are found to be co-equal, then classification under the provision for machinery for washing textile filaments, yarns, fabrics or made-up textile articles, and parts of such machinery, in item 670.43, TSUS, is appropriate.

ISSUE:

Is the protested article within the eo nomine provision for pulleys; does it perform primarily a clutching function making it classifiable as a clutch; or is it more than either, making it classifiable as a washing machine part?

LAW AND ANALYSIS:

Either of counsel's proposed classifications as "parts" would be subject to General Interpretative Rule 10(ij), TSUS, which requires classification in a specific tariff provision if one is found to exist. Pulleys are generally regarded as wheels with flat, crowned, or grooved (as in a sheave) rims, used to change the direction and point of application of a pulling force or to transmit motion or energy. See A. N. Deringer, Inc. v. United States, 62 Cust. Ct. 734, C.D. 3856 (1969), and related cases.

A13

We conclude that the protested merchandise falls squarely within the common meaning of the term "pulley" for tariff purposes. It must be determined however, whether the so-called "more than" doctrine applies here so as to negate classification as a pulley. The essential argument in this regard is that the spinning clothes basket must have an on-off capability to function effectively, and that the friction surface (also referred to as the clutching surface) of the pulley, which completes the basic function of the clutch mechanism, performs this function and, therefore, is the predominant feature of the pulley or, at least, imparts an additional co-equal function.

Our examination of the subject article and attending literature lead us to conclude that it is primarily designed to transmit power from the washing machine motor to the spin basket. This is essentially the function of a pulley. It has not been subjected to an additional process of manufacture so as to invest it with a new function, i.e., as a clutch part. Pollard Bearings Corporation v. United States, 75 Cust. Ct. 149, C.D. 4619 (1975), United Carr Fastener Corporation v. United States, C.D. 2648, aff'd C.A.D. 913 (1967), and E. Green & Son (New York), Inc. v. United States, C.D. 3985, aff'd. C.A.D. 1032 (1971), are cited for purposes of distinction. The fact that an article designed as a pulley and used as such, but which also completes a clutching function, despite the absence of any special design features appropriate to that purpose, leads us to conclude that any such function of the pulley is clearly subordinate. Counsel's reference to the pulley's "drive surface" which smoothly transmits power to the spin basket is not persuasive, as such surfaces are common to most pulleys.

A14

We therefore conclude that by primary function and design, the clutch disc pulley under consideration is properly classifiable under the provision for pulleys, in item 680.95, TSUS.

HOLDING:

The protested merchandise is classifiable in item 680.95, as indicated. The protest should be denied. A copy of this decision should be attached to the Form 19, Notice of Action to satisfy the notice requirements of section 174.30(a), Customs Regulations, as amended by section 174.30(a), Customs Regulations (19 CFR 174.30(a)).

Sincerely,

Arthur P. Schaffner

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

075883

DATE: [illegible]

FILE: CLA-2:CO:R:CV:G
075883 JCH

TO : Area Director of Customs
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice No. 31/85 Concerning the Tariff Classification of Woven Wool Fabrics Claimed to be Upholstery Fabrics (Your Memorandum of March 12, 1985, File Ref. CLA-2-03:S:COM:N3H:352-512)

The subject IA request was initiated by the importer in a letter dated July 20, 1984. Since that time counsel has participated in this matter. The merchandise is produced in Italy. Our decision follows:

ISSUE:

It is claimed in the IA request and subsequent submissions that various textile products are classifiable as woven wool upholstery fabrics valued over $2 per pound in item 357.15, Tariff Schedules of the United States (TSUS). The 1984 column 1 rate of duty required under that provision was 19 cents per pound plus 7 percent ad valorem. The competing rate is 30 cents per pound plus 38 percent ad valorem under the more general provision for woven wool fabrics valued over $2 per pound but not over $9 per pound in item 336.62, TSUS.

To resolve this tariff competition, it must be determined whether the fabrics at issue are of a multipurpose type or a class or kind of fabric chiefly used for upholstery.

B2

FACTS:

In the submissions and exhibits provided in this matter by both the importer and Customs personnel 16 different fabric names have been referred to. However, apparently with respect to at least 9 of them Customs is not or is no longer contesting the claim that they are upholstery fabrics. With respect to three fabrics, Astoria, Panama and Salem, the Customs position with regard to them is not clear, nor is the nature of any objections to that position specified in the submissions by the importer and counsel. Accordingly, with respect to those fabrics, this IA is not shown to meet the requirements of 19 CFR 177.11(b)(4) limiting our review to situations where there is a bona fide difference of opinion, and the tariff classification of those fabrics will not be considered in this decision.

In fact, in counsel's latest submission of November 6, 1985, it is indicated that only the tariff classification of fabric Diana (claimed to be the same quality as Colombo) and fabric Cremona remain in question. Samples of these have been provided. Diana is a predominantly blue plaid twill stated to be 70 percent wool, 20 percent polyamide fibers and 10 percent other fibers (O.F.). Customs Laboratory report dated December 26, 1984, shows this fabric to weigh 8.07 ounces per square yard and have medium duty abrasion resistance at 9000 cycles. Breaking strength of the warp was 50 pounds and the filling 44 pounds. A report from the Wool Bureau Technical Services Center shows this fabric has an

B3

075883

abrasion resistance of 50,000 cycles. A report from the Better Fabrics Testing Bureau, Inc., shows Colombo had an abrasion resistance of 20,000 cycles using the Wyzenbeek test and ASTM D 3597 as modified by using No. 10 cotton duck as an abradant.

Cremona is a plain-weave plaid in which reds, blues and beiges may be used as predominant colors. It is also claimed to have the same fiber composition as Diana. Customs Laboratory report dated December 26, 1984, shows it weighed 8.73 ounces per square yard and had less than light-duty abrasion resistance at 3,000 cycles. It was also shown to have breaking strength of 40 pounds in the warp and 42 pounds in the filling. Casual examination of the yarns of both Diana and Cremona disclosed no discernable fiber separation at five reverse twists per inch. It has been further indicated that both fabrics undergo further processing after importation for necessary surface characteristics.

A submitted copy of specifications of the International Wool Secretariat shows that upholstery fabrics may contain 70 percent wool and between a 5 and 30 percent non-wool fiber content. Specifications for abrasion resistance are shown to be 20,000 rubs and breaking load more than 40 kg. In a letter dated October 24, 1985, from the Wool Bureau, Inc., it was stated it was determined that replacing the traditional wire screen abradant used in testing upholstery fabrics with a No. 10 cotton duck abradant would produce results more realistically related to actual service requirements. A copy

075883

B4

of an undated bulletin promulgating this change has also been submitted. Similar information dated October 31, 1985, from the Better Fabrics Testing Bureau, Inc., has been submitted. Additionally, evidence is in file showing the importer in question is a supplier to the upholstering and related trades.

LAW AND ANALYSIS:

Counsel has cited various authorities for the proposition that the classification standard applicable to upholstery fabrics is chief use. In this connection, United States v. The Carborundum Company, 63 CCPA 98, C.A.D. 1172 (1976), has been cited for its guidelines in chief use determinations. Chief use, of course, involves two correlative but separate components, use and the class or kind of merchandise to which the use relates. See General Headnote 10(e)(i), TSUS. In the exhibits and written arguments submitted in this matter and in an oral presentation during a conference on October 3, 1985, 10 specific factors have been set out for us as appropriate considerations for determining chief use and defining class or kind as they may be applicable to the fabrics in question and to upholstery fabrics in general. Of those factors, two concern such considerations as channels of trade or those more specifically related to use while the remaining eight deal specifically with the identification of physical characteristics by which upholstery fabrics as a class or kind may be objectively distinguished from other fabrics.

B5

038583

The first factor submitted for our consideration is weight. It is claimed that the point of demarcation between wool upholstery fabrics and other wool fabrics is 8.3 ounces per square yard. The second factor is abrasion resistance as defined in the exhibits together with strength and other considerations related to service. The third factor is bolt width. It is claimed that upholstery fabrics more typically are supplied in 54-inch widths while apparel fabrics are more typically supplied in 60-inch widths. The fourth factor is color and design. It is claimed that apparel fabric fashions are recognizable and distinguishable from upholstery styles for such characteristics as seasonal colors, etc.

The fifth factor deals with pattern location. It is claimed that stripes for upholstery fabrics are placed horizontally and other designs are off-center. The sixth factor is fiber content. It is claimed that apparel fabrics are more typically 100 percent pure wool or otherwise more purely blended, that upholstery fabrics, by contrast, may typically be as low as 70 percent wool with up to 10 percent O.F., and that blends of this type in the price ranges involved could not compete in the apparel fabric market. The seventh factor is yarn twist. It is claimed that yarns for upholstery fabrics typically have 9 turns to the inch for greater strength, while apparel fabrics typically have 5 turns to the inch for better draping qualities and crease resistance. The eighth factor deals with surface characteristics. It is claimed that upholstery fabrics are

B6

01585873

typically treated with a chemical or other process to make them non-pilling.

The remaining factors dealing with use rather than the identification of class or kind include distribution and sale to furniture manufacturers and other establishments which will not use the fabrics for apparel. The tenth and last factor concerns sourcing. It is claimed that upholstery mills supply merchandise in fewer pieces per pattern than an apparel fabric mill would supply. However, the submissions and exhibits in this matter include no evidence showing the fabrics have been supplied in the circumstances contemplated by this last factor.

Nor are the fabrics shown to comply with the eighth factor dealing with surface qualities since these are created after importation and the products do not have the necessary non-pilling characteristics in their condition as imported. However, at least Diana may be in conformance with the claimed fifth factor dealing with pattern location since its pattern has been reported as asymmetrical.

Compliance of either fabric with the fourth factor dealing with color and design is problematical. While we are aware of the use of plaids in interior decoration themes, such as those illustrated in the House Beautiful Home Decoration magazine (Spring ed., 1985), we can perceive no coloristic effects or other subtleties in the plaids represented by the samples dedicating them to interior

decoration uses to the exclusion of apparel uses. Even reliance on the third factor dealing with bolt width is problematical since actual measurements showed some variations in fabric widths.

With respect to the second factor dealing with abrasion resistance and related service considerations, Customs Laboratory examination showed the fabrics were far below the 20,000 cycle standard. While private laboratory tests produced widely divergent results by substituting a cotton duck abradant, the submissions suggest that the use of such an abradant is a comparatively recent change in testing methods. While in our use of testing standards for tariff classification purposes we generally will not dispute changes made in those standards from time to time by the non-governmental agencies monitoring the standards, changes in testing standards cannot be permitted to significantly alter the preexisting scope of a tariff provision. The disparity in the testing results at issue here shows that just such a result would ensue here if we departed from the traditional methods in the laboratory evaluation of fabrics. With respect to the first factor dealing with weight, only Cremona is on the upholstery quality side of the claimed dividing line.

In conclusion, evidence of sales to upholsterers, etc., cannot be determinative in this matter unless those sales are shown to relate to fabrics which as a class or kind have

B8

015882

physical characteristics distinguishing them from other fabrics. While we would not allow compliance with only one of the factors relating to the identification of class or kind determine classification, we would not withhold classification as an upholstery fabric if something less than all of the identified factors plus any other factors which may be pertinent were complied with. However, there must be a combination of at least some factors persuasive of the existence of a class or kind chiefly used for upholstery. Further, some of the factors must be regarded as more important than others, and compliance with one may not merit the same degree of consideration as compliance with another.

HOLDING:

Of the factors discussed above, fabric Diana may only be in compliance with the fifth, sixth, seventh and ninth factors dealing with pattern location, fiber content, yarn twist and trade distribution. However, we find that is countered by noncompliance with the more important factors relating to fabric weight and abrasion resistance. While Cremona may be in compliance with the weight factor, and may be in compliance with the sixth, seventh and ninth factors also, we find that is outweighed by noncompliance with the abrasion resistance factor as well as others, such as those dealing with design, color and surface characteristics which are not convincing of a class or kind of fabric chiefly used for upholstery. Accordingly, we find these fabrics, if not over $9 per pound, are properly classifiable as other than

B9

upholstery fabrics in item 336.62, TSUS. A copy of this decision should be made available to counsel for the internal advice applicant.

075932

District Director of Customs
477 Michigan Avenue
Detroit, Michigan 48226-2568

Dear Sir:

Re: Application for Further Review of Protest No. 3801-5-000031, dated October 5, 1984

This protest is against your decisions in the liquidations on July 13, 1984, of entry Nos. 467678, dated August 23, 1983, and 469845, dated September 19, 1983. The protest concerns the classification of "woven polybags."

The submitted sample is a shipping bag made from woven man-made fiber strips. The exterior of the bag has been coated or laminated with a plastics material. This coating or lamination is not uniform over the entire surface of the bag. Rather, there are gaps in the coating which appear to make up approximately 10 percent of the surface area of the bag. Printed on the exterior portion of the bag in black letters are words indicating that the bag is intended to hold 100 pounds of kidney beans. The transparent man-made fiber strips are clearly discernible in the open uncoated areas. In addition, it appears that the man-made fiber strips comprising the bag can be seen through the white coating or filling plastics material.

The importer believes the merchandise should be classified under the provision for containers of rubber or plastics, chiefly used in the packing, transporting, or marketing of merchandise, in item 772.20, Tariff Schedules of the United States (TSUS). The merchandise was classified and liquidated under the provision for bags and sacks, or other shipping containers, of man-made fibers, in item 385.53, TSUS. The basis for the importer's position is Headnote 5, Schedule 3, TSUS, which provides, in essence, that in determining the classification of any article which is wholly or in part of a fabric coated or filled, or laminated, with nontransparent rubber or plastics, the fabric shall be regarded not as a textile material but as being wholly of rubber or plastics to the extent that the nontransparent rubber or plastics forms the outer surface of such article.

BJ1

As can be seen from the above description of the subject merchandise, (1) we do not believe that the white plastics coating or laminating material is nontransparent since the man-made fiber strips can be seen through it, and (2) the gaps in the coating or laminating material allow the underlying fabric to be seen. It is our view that the legislative history of Headnote 5 clearly requires that the Headnote not be applicable to merchandise unless the textile character of that merchandise is obscured by the coating or laminating material. That is not the case in this instance. Accordingly, the merchandise was properly classified in item 385.53, TSUS.

You should deny the protest in full. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

26 DEC 1985

Mr. J.A. Fanok
Attorney
Panasonic Industrial Co.
J. Fanok Services, Inc.
61 Broadway
New York, New York 10006

Dear Mr. Fanok:

You have requested a ruling on the tariff classification of a hand-held pocket-sized terminal, Model PT01, which we understand to be a product of Japan, manufactured by Matshushita Electronic Industries.

The terminal is a sophisticated electronic device that is provided by a bank for use by its account holders. The device marketed as a pocket terminal operates in a manner similar to the permanent tellers currently in use by banks, in that a depositor may be informed electronically of general information about the bank's accounts and services as well as specific information about the depositor's accounts. For example, the account balance, the last five deposits, the interest earned to date, and the maturity date for savings products are provided by the device on command. The device will also transfer funds from one account to another and is apparently designed to be capable of paying bills, getting stock market information, canceling payments, changing the account address and the like. Product literature, however, shows that the bank presently does not have its computers programmed to provide this information to the remote terminals.

The device is battery-operated and transmits and receives information through a telephone line. Access to telephone lines is obtained by the use of modular jacks at each end and a telephone cord. The keyboard contains 24 keys, 10 of which are numbered 1 to zero and spaced like a standard push-button telephone. Various commands are marked on other keys such as "DISPLAY", "INFO", and "ENTER." The keys serve to transmit commands to the bank's computer and the numbered keys along with various computing command keys operate like a hand calculator. The visual display panel running horizontally along the top of the six rows of keys appears to be of the LCD variety, although this information does not appear in the literature submitted.

B13

The issue is whether any of the function-related tariff items describe this article, or whether, failing that classification, the article must be relegated to the basket provision for electrical articles, item 688.42, TSUS.

Classification in item 676.20, TSUS, the provision that includes electronic calculating machines specially constructed for multiplying and dividing, employing solid-state circuitry, is not appropriate because the classification does not include the principal function of sending and receiving information or data, or the manipulation of that data in the bank's host computer records.

The article also appears to be disqualified from classification in item 673.30, TSUS, under "Office machines, not specially provided for" as a data processing machine or as an other office machine. Its selling point, according to the instruction brochure, seems to be that it is portable and hand-held to be used in the "privacy of [the] home or office, when traveling or anywhere." Therefore, it does not meet the headnote standards for office machines which require the article to "have a base for fixing or placing them on a table, desk, wall, floor or similar place." Headnote 2(a), Subpart G, Part 4, Schedule 6. Moreover, this article by its description appears principally to be not so much a data processing machine as it is an accessory to a data processing machine operated by the bank on their premises.

The superior heading, "Electrical telegraph...and telephone apparatus and instruments..." provides the most appropriate and specific classification of the article. The predominant characteristic of the pocket terminal is its ability to receive and transmit information from a computer by use of a telephone line. The article is not reasonably described as a computer itself, but rather as a sender/receiver of information, allied functionally with telegraph and telephone apparatus.

After due consideration, this office has determined that the mathematic function performed by the calculator is subordinate to the function of the terminal. The operation of the calculator uses some of the same electronic components as the terminal, the same power source, the same keyboard and same display panel. But the addition of the calculator function

B14

does not alter the principal function of the article, nor is the calculator function integral to the sending/receiving function of the device, distinguishing the result in our ruling no. 071018 SC, issued March 7, 1983. Therefore, in our view, the calculator function cannot be seriously considered as significant to the terminal and the classification of the article as "Other" terminal apparatus is the most specific classification. The hand-held pocket terminal is classified in item 684.66, TSUS, with a Column 1 rate of duty of 5.3 percent ad valorem for products of Japan.

12 DEC 1985

District Director of Customs
Patrick V. McNamara Building
477 Michigan Avenue
Detroit, Michigan 48226-2568

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3801-4-000229

This protest was filed against your decision in the liquidation of certain entries covering shipments of Abiform Forms Paper 65 produced in Canada.

This ruling concerns the correct tariff classification and value of the paper.

FACTS:

The paper involved is Abiform Forms Paper 65, an uncoated paper produced by Abitibi-Price, Inc. of Canada. Both its classification and its value are being contested by the protestant.

ISSUE:

What is the correct classification of this paper? What is the correct value of this paper?

LAW AND ANALYSIS:

We note initially that similar classification issues concerning Abiform Forms Paper 65 were dealt with in Customs Headquarters Ruling Letter (HRL) 074564 of November 26, 1984, which concluded that Abiform Forms Paper 65 (now known as Abiform 65) was classified as a writing paper in item 252.75, Tariff Schedules of the United States (TSUS). This protest makes additional claims.

076053

C2

The Detroit district director argues that the paper is classifiable in accordance with the chief use of similar and identical grade papers. He observes that Treasury Decision 72-207 and Legal Determination 82-0071 concluded that paper chiefly used for conversion into computer and business forms is classifiable as writing paper in item 252.75, TSUS. Inasmuch as the paper in question seems to be used solely for conversion into business forms, he contends that it is classifiable under the provision for writing paper weighing over 18 pounds per ream, in item 252.75, TSUS.

The protestant claims that the subject paper is a newsprint grade with a high brightness which is used in the commercial printing market. The protestant asserts, at page 2 of its protest statement, that:

> The product under discussion, Abiform, ... complies with the descriptive specifications for standard newsprint paper set out in Treasury Decision 56349 dated January 22, 1965, except that it is sometimes sold in weights less than 28.5 pounds and greater than 35 pounds per ream to accommodate the commercial printing market.

Customs Laboratory Report No. 3-84-20141, dated January 31, 1984, advises that some Forms Paper 65 conforms to the laboratory tests for standard newsprint paper. (One of the specifications of T.D. 68-265(20), i.e., the size of the rolls in which the paper is imported, is not ascertainable by the laboratory and therefore is not mentioned.)

T.D. 68-265(20) updates T.D. 56349 and contains the standard newsprint specifications referred to by the protestant and by the laboratory. It is the most recent statement of finding made by the Customs Service as to the chief use of paper meeting those specifications. That portion of the subject paper produced and marketed as Abiform Forms Paper 65 or its variants which meets all of the specifications of T.D. 68-265(20), including the size of the rolls in which the paper is imported, is

076053

therefore classifiable under the provision for standard newsprint paper in item 252.65, TSUS.

It remains to be determined whether the chief use of the balance of the subject paper is as writing paper. T.D. 72-207 and Legal Determination 82-0071 indicate that such paper is writing paper because it is chiefly "converted into computer output forms and business forms for the recordation of data by pen, pencil, typewriter or similar device, etc." In other words, if the chief use of a paper is in making computer printout forms and business forms, then the paper must be classified as a writing paper. Inasmuch as the Detroit import specialist has found the subject paper to be chiefly used for conversion into business forms, and the protestant has not shown that the paper belongs to a class or kind of paper not so chiefly used, the balance of the paper is classifiable as a writing paper in item 252.75, TSUS. See HRL 074564 of November 26, 1984.

To recapitulate, that portion of Abiform 65 which meets all of the standard newsprint specifications set forth in T.D. 68-265(20) is classifiable as standard newsprint in item 252.65, TSUS. The remainder of the Abiform 65 — which does not meet all of the standard newsprint specifications but which meets the characteristics of the class or kind set forth on page 3 of HRL 074564 — is found to be chiefly used for business forms and is classifiable as writing paper in item 252.75, TSUS.

An additional claim made by counsel for the protestant is that an estimated 390 entries of Abiforms Forms Paper 65 were liquidated under the provision for book and printing paper not specially provided for in item 252.67, TSUS, during 1982 at the Customs ports of Sault Saint Marie, Michigan and Buffalo, New York. He cites Heraeus-Amersil, Inc. v. United States, Slip Op. 85-60 of June 6, 1985, in support of his assertion that this number of entries establishes a practice of classification.

076053

C4

With regard to counsel's claim of a uniform and established practice, we have been advised by the Champlain, New York, import specialist who handles this paper that he never classified Abiform Forms Paper in item 252.67, TSUS, and that, beginning in early 1983, he always classified Abiform Forms Paper 65 under item 252.75, TSUS, as a writing paper.

Heraeus-Amersil, Inc. v. United States, supra, found that a uniform and established practice existed because of the liquidation of more than 300 entries over a 10 year period of like or similar merchandise classified under the same tariff classifications. The Heraeus-Amersil court stated that the factors to be considered when looking for a uniform and established practice are the number of entries resulting in the alleged uniform classifications, the number of ports at which the merchandise was entered, the period of time over which the alleged uniform classifications took place, and whether there had been any uncertainty regarding the classification over its history. The court was particularly impressed with the fact that seemingly uniform liquidations had spanned a period of 10 years.

In the instant case, the alleged uniform liquidations all took place within one year. We note, furthermore, that while counsel for the protestant claims that an estimated 390 entries were liquidated under item 252.67, TSUS, in 1982, he can in fact cite only four specific entries which were liquidated between October 1, 1982, and October 20, 1982, under item 252.67, TSUS. In view of the short time period involved, the fact that counsel can produce only four actual liquidations, and the fact that a third port, Champlain, New York, began liquidations under item 252.75, TSUS, in early 1983, we find that no uniform and established practice existed with regard to the instant paper. In view of the finding of the

076053

CS

Court of Customs and Patent Appeals in Washington Handle Co. v. United States, 34 CCPA 80, C.A.D. 346 (1946), that 28 liquidations at two ports over a two year period did not constitute a practice, counsel has produced insufficient evidence to convince us that there was a uniform and established practice.

The importer also protests the assessment of duty on the value of "foreign inland freight" contained as part of the price actually paid or payable for the merchandise. In this regard, it appears from the file that all sales of the merchandise in question were made on an F.O.B. mill basis (according to commercial invoices) or on an ex-factory basis (according to a CF 6431 in the file and a conversation by a member of this office with Mr. Finland of Detroit Customs). Additionally, it appears that the price actually paid or payable for the merchandise in each invoice included a total amount for inland freight within Canada plus freight within the United States. Apparently, only the freight within the United States was allowed as a nondutiable charge.

Initially we note that our regulation regarding the dutiability of foreign inland freight was amended in T.D. 84-235, published in the Federal Register on November 29, 1984. Additionally, the section of the above T.D. relating to its effective date indicated that the amendment would be applicable to all entries of merchandise for which liquidation was not final on the date of the T.D.'s publication. Accordingly, the amendment to our regulation applies to the entries being protested.

Finally, although prior to the publication of T.D. 84-235, foreign inland freight was always dutiable if it was part of the price actually paid or payable for the merchandise, such is not necessarily the case under the amended regulations. In this regard, Headquarters Telex 13149, dated February 4, 1985, indicates in paragraph B.1.:

076053

c6

B. C.I.E. or F.O.B. Transaction. Foreign inland freight expenses are non-dutiable charges if the terms of sale for the merchandise are C.I.F. or F.O.B. and if: the charges are separately itemized and claimed; the claim and the amount is both appropriate and reasonable; the foreign inland freight is freight from:

1. The point or place where the buyer or importer assumes the responsibility for the merchandise to the point or place where the merchandise enters the Customs territory of the United States.

Additionally, paragraph A. of the same telex indicates that all foreign inland freight costs are non-dutiable if the terms of sale for the merchandise are "ex-factory." Since it appears that the transactions in the protested entries fall within either paragraph A. or B.1. of the above telex, the charges for foreign inland freight should be allowed as nondutiable if the claimed amount thereof is found to be reasonable and appropriate.

HOLDING:

With respect to the appraised value of the merchandise, the charges for foreign inland freight should be allowed as nondutiable if the claimed amount is reasonable and appropriate, as indicated above. The protest is allowed in part with regard to this issue.

With regard to the classification issue, any of the paper covered by the protest which meets all of the specifications of T.D. 68-265(20) for standard newsprint should be reliquidated in item 252.65, TSUS; the protest is approved in part with regard to the classification issue concerning this paper. With respect to the classification of the balance of the paper covered by this protest, which has been found by the Detroit import specialist to be chiefly used for conversion into business forms, the protest must be denied. Classification under the provision for writing paper in item 252.75, TSUS, is correct for such paper.

076053

PUBLIC

A copy of this decision letter should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

John T. Rath

Re: Decision on Difference of Opinion Reported on Customs Form 6431, Dated October 10, 1984, From Buffalo Concerning Double-Walled Chimney Pipes

Dear Ms. DeGaetano:

In your memorandum of April 23, 1985, you forwarded the difference of opinion for our decision. This ruling is our decision on the classification issue.

FACTS:

The merchandise in issue consists of several types of double-walled pipes and pipe fittings designed for use as chimney flues for various kinds of stoves. Samples submitted are representative of the typical construction for the pipes and fittings:

1. No. 258-H: single wall pipe with fluted end for insertion into another section of pipe; the seam is made by interlocking edges and crimping at certain points.

2. No. 258-D: Double wall pipe with aluminum flue and carbon steel casing; inner pipe is secured by rivet (and, in addition, by crimping) to casing in such a manner as to leave an insulating air space.

3. No. 258-F: Double wall connector with stainless steel flue and carbon steel (painted) casing; flue secured by three rivets to casing so that an insulating air space is formed.

C9

4. No. 258-B: Double wall insulated connector with stainless steel flue and casing; insulation is fibrous material; the ends of the connector are formed into male and female ends by spacers which are riveted to the casing and, on the male end, overlap the flue liner and appear to be swaged with the liner to form an additional bond.

ISSUE:

The sole issue is whether or not the method of manufacture is such that the double wall chimney pipe is more than pipe or tube within the meaning of Part 2, Schedule 6, Tariff Schedules of the United States (TSUS).

LAW AND ANALYSIS:

Although numerous administrative decisions are cited in support of both opinions, no case is on point. The controlling principles are found in the statutory headnotes to Part 2 of Schedule 6. Although Headnote 1 appears to define the processes by which the basic products in Part 2 are formed as "rolled, forged, drawn, extruded, cast or sintered," the language also reads "[u]nless the context requires otherwise." In this case, Headnote 3(e) of Part 2 provides a broader context for pipes and tubes.

In J. C. De Jong & Co., Inc. v. United States, 62 Cust. Ct. 605, C.D. 3832 (1969), the court held that a tube produced from two separate tubes by cold reducing (drawing) an outer tube over an inner tube to bond them together was a tube within the meaning of Headnote 3(e), Part 2, Schedule 6,

076677

C10

TSUS. The method of manufacture of the double wall pipes, in this case, is different, but does not require a conclusion that they are not pipes within the meaning of Headnote 3(e). The flue and casing, in each case, are functionally bonded together.

The use of a fibrous insulation as packing between the flue and casing of No. 258-B does not preclude classification as pipe. This insulation is similar in effect to glass linings or asphalt coatings used on other pipes and tubes which have been classified in Part 2 of Schedule 6. See, for example, letter ruling of August 14, 1975 (file 040621), on glass liner bonded to inner wall of steel tube; T.D. 66-94(40) concerning steel pipe coated with tar enamel, wrapped with felt, and finished with Kraft paper.

HOLDING:

Double wall chimney pipes and connectors, whether or not filled with an insulating material, are classified in Part 2 of Schedule 6, as pipes and pipe fittings.

Sincerely,

Arthur P. Schaffner

NOV 20 1985

REFER TO

CLA-2 CO:R:CV:G

076163 c

076163

Mr. Charles Garland
Import Manager
E.S. Originals, Inc.
20 West 33rd Street
New York, New York 10001

Dear Mr. Garland:

Your letter dated May 2, 1985, addressed to our New York office concerning the dutiable status of a PVC based material which has been sprayed or coated with leather particles, has been referred to us for a direct reply to you.

We have been advised that this material will be used as the entire upper of a cemented, slip-on shoe with a plastic sole. The shoe will be over 50 percent by weight of plastics and in chief value of plastics.

A laboratory analysis of a sample of the material involved states that the material was manufactured by the following process:

> A layer of uncured PVC type plastic was spread on one surface of a plain woven man-made fiber fabric. The PVC plastic was heat cured, releasing a gas forming agent and creating a closed cell foamed structure. The exposed surface of the foamed PVC plastic was then coated with resin/adhesive material and "chopped-up" leather fiber was "sprayed" over the tacky surface and then cured.

We would not consider the instant material as a plastic because the manufacturing process described above is analogous to textile fiber flocking on plastic which is considered for tariff purposes as a textile surface area.

This material is not considered to have a fiber surface due to two definitions. Schedule 7, Part 1, Subpart A, Headnote 2(q), Tariff Schedules of the United States (TSUS), defines "fibers" as including animal fibers. However, a textile dictionary definition of "animal fibers" does not include leather fibers which were defined elsewhere.

C12

This material is not a leather surface because it does not meet the tariff definitions of leather found in Schedule 7, Part 13, Subpart B, Headnote 1(a), TSUS, and Schedule 1, Part 5, Subpart A, Headnote 1(a), TSUS.

Noting that the material constituting the surface of the upper is not considered plastic, fiber, or leather, it must be considered to be "other" material.

In view of the foregoing, it is our position that an open toe, cement construction shoe which is over 50 percent by weight of plastic and which has the subject material constituting its upper is dutiable at the rate of 37.5 percent ad valorem under item 700.59, TSUS.

Sincerely,

Arthur P. Scheffler

CLA-2 CO:R:CV:G
076288 PR

076288

This ruling is in response to a Request for Internal Advice, No. 49/85, concerning the tariff status of certain shorts.

ISSUE:

The issue presented is whether the subject garments are classifiable under the provision for other men's or boys' wearing apparel, of man-made fibers, ornamented, knit, in item 379.2340, Tariff Schedules of the United States Annotated (TSUSA), as swimming trunks, with a textile category designation of 659, or in item 379.2350, TSUSA, as shorts, with a textile category designation of 647.

FACTS:

Two samples were submitted, styles T-2441 and T-2442. Both are boxer style shorts that are made from a lightweight nylon tricot fabric. Each has a full elasticized waistband with a functional inside drawstring, a full support nylon tricot liner of the same color as the outer shell, side leg slits, and nylon tricot capping along the edge of each leg opening. The leg openings of each garment appear to be oversized. Style T-2441 is ornamented by a rectangular-shaped textile label affixed to the left front area of the garment and by an overlaid strip of nylon tricot fabric of contrasting color which extends down each side seam. Style T-2442 is ornamented by a similar rectangular-shaped decorative label on the left front of the garment. The styles are stated to be designed for wear by large boys and were imported in sizes small, medium, and large.

C14

There is nothing on the garments which appears to dedicate them to the exclusive wear of men or boys. On the contrary, when viewing the garments, they are similar to garments sold in sporting goods stores as running shorts for women. However, for the purposes of this reply, we will assume that these garments are, in fact, identifiable as being intended for the exclusive wear of boys. Otherwise, the issue presented would not necessitate the following discussion since boxer-style shorts of the kind here represented are not within the class or kind of garments commonly or commercially known as women's or girls' swimwear.

LAW AND ANALYSIS:

On February 17, 1984, this office issued ruling 073387, concerning the tariff classification of men's boxer-style shorts made from woven fabric. In that ruling, it was stated that the term "swimwear" connotes garments which are intended for wear in water and which are predominately used in that manner. It was further stated in that ruling that if a question concerning the commercial identity of a garment arises, in determining whether the garment is swimwear or shorts, Customs will look at the following features:

(1) The fabric from which the garment is made,

(2) The presence of side inserted pockets, which are usually a characteristic of shorts and not swimwear.

(3) The presence of cotton liners, which are more often found on multipurpose or running shorts; and

(4) The presence of a fly front, which is not a normal feature on swimwear.

These criteria were followed by warning that while the fabric of each garment is the primary criterion and may be determinative by itself, none of the other features are necessarily determinative by themselves, or in combination. Each article of apparel should be considered as a whole and,

D1

due to the specific nature of swimwear, if a garment is not readily identifiable as swimwear, it is a multipurpose garment and should be classified as shorts. While ruling 073387 dealt with garments made from woven fabrics, the criteria stated in that ruling is general in nature. The importer now contends that the subject merchandise meets all the criteria contained in ruling 073387.

The criterion in ruling 073387 concerning the fabric from which the garment is made discusses woven fabrics. However, it is equally applicable to knits. Information available to Customs is that various domestic manufacturers and importers believe that lightweight nylon or polyester tricot shorts are designed for running or as activewear garments and are not desirable for use as swimwear. Tricot fabric tends to be quite clingy, which could result in embarrassment to the wearer. Accordingly, we conclude that the fabric from the instant garments are made is not a fabric normally used in the manufacture of swimwear. It is our view that the subject merchandise clearly falls within a class of articles commonly and commercially known as activewear or running shorts. Although these garments may be used in the water, as cut-off jeans sometimes are, they are not normally used in swimming.

We are cognizant of our ruling 054606, dated March 10, 1978, which characterized a blue knit boxer-style garment as swim trunks. The liner in that garment was white, which seems to be a characteristic of swim trunks, rather than matching the color of the exterior of the garment. Since Customs will classify each garment according to its own characteristics, the language in the preceding paragraph is not intended to convey the impression we believe swim trunks cannot be made of knit fabric. However,

076288

D2

the garment which was the subject of ruling 054606 was not constructed of fabric similar to that from which the instant merchandise is made and is, therefore, not pertinent to this determination.

Two additional questions raised by the importer must be addressed. First, the importer alleges that its representatives met with Customs officials in July and August 1983 and were orally advised that garments with a full separate liner, a drawstring, and nonabsorbent material suitable for swimming would be classified as swimwear. Based on this information, they ordered the subject merchandise.

It is noted that, aside from the fact that our National Import Specialist has no record of any such meetings, the importer indicates it was represented by a customhouse broker who has, or should have, ample knowledge on how to obtain a written ruling from the Customs Service. Oral statements by Customs employees, even those at the Headquarters level, are not binding on the Customs Service.

The second additional issue to be resolved is that the importer believes its merchandise falls within the purview of a letter from Headquarters, dated May 2, 1984. In that letter, our ruling 073387 was amended because of some confusion in the area of men's woven shorts to reflect that it was not applicable to men's or boys' shorts which would have been, prior to that ruling, classified as swimwear, provided that sufficient evidence is presented to the responsible import specialist showing that the merchandise in question was ordered prior to February 17, 1984. In this regard, the importer has presented evidence which purports to show that the subject merchandise was ordered prior to February 17, 1984.

D3

It does not appear to this office that the subject merchandise falls within the purview of the May 2, 1984, amendment to our ruling 073387. Our information is that there existed no confusion on the classification of knit running shorts and that garments similar to the subject merchandise were not normally or usually classified as swimwear prior to ruling 073387. While some shipments of this merchandise may have inadvertantly been classified as swimwear, to our knowledge, most, if not all, of this merchandise imported prior to February 17, 1984, was classified as shorts and not as swimwear. Accordingly, the subject merchandise does not fall within the express terms of the May 2, 1984, amendment to ruling 073387.

HOLDING:

The subject merchandise is classifiable as shorts and, if identifiable as being intended exclusively for the wear of men or boys, is classifiable in item 379.2350 (now item 381.2350) with a textile category designation of 647.

SUBJECT: Request for Internal Advice No. 29/85 Concerning the Tariff Classification of an Incomplete CAT Scanner System (Your memorandum of March 1, 1985, K:C 0090 CLA-2-K:C:D I/III EM)

The subject internal advice request was initiated by counsel for the importer in a letter dated February 8, 1985. This merchandise is a product of West Germany. Our decision follows:

ISSUE:

The merchandise was entered in 1984 under the provision for apparatus based on the use of X-rays in item 709.63, Tariff Schedules of the United States (TSUS). The 1984 column 1 rate of duty required under that provision was 2.3 percent ad valorem. A notice was issued of advancement to 4.9 percent ad valorem, the rate for electro-medical apparatus covered by item 709.17, TSUS. The main issues for resolution are whether the imported modular medical equipment which is less than a complete computer assisted tomography (CAT) scanner system may be regarded as an entirety and, if so, whether it constitutes more than X-ray apparatus.

D5

FACTS:

The imported merchandise is an incomplete CAT scanner system consisting of the scanning gantry, power cabinet, patient table and main diagnostic control unit. These components are considered to be an incomplete system because the central computer unit and other ancillary or peripheral equipment which are necessary for a complete system are supplied domestically.

LAW AND ANALYSIS:

In our decision of September 26, 1983, C.S.D. 84-37, we held that the basic components of a complete CAT system were classifiable as an entirety under the provision for electro-medical apparatus in item 709.17. Certain ancillary or peripheral equipment, however, was not considered part of the entirety and was separately classifiable. While we are urged to reconsider that decision, the lengthy discussion in that matter is self-explanatory and any recapitulations of the facts or rationale contained therein would serve no useful purpose. No modifications in that decision will be made at this time.

Given, therefore, that a complete CAT scanner system is an entirety, anything short of the complete system would technically not be an entirety. It is axiomatic that there

076339

D6

is no such thing as an incomplete entirety. Franklin Industries, Inc. v. United States, 1 CIT 349 (1981); United States v. Baldt Anchor Chain & Forge, 59 CCPA 122, C.A.D. 1051 (1972).

As separately classifiable merchandise, the scanning gantry would qualify for classification as X-ray apparatus. In our opinion, there is no authority to support any view that X-ray apparatus must be complete or that item 709.63 excludes merchandise which is part of a larger article or system. While the patient table would ordinarily be classifiable separately as medical furniture, we find that it also must be classified under item 709.63. In accordance with Headnote 1(xii), Subpart A, Part 4, Schedule 7, TSUS, X-ray tables must be classified under item 709.63 whether or not they are imported as entireties with X-ray apparatus. We also find the power supply is similarly classifiable whether or not an entirety with X-ray apparatus.

However, the tariff classification of the diagnostic control unit is controlled by General Headnote 10(ij), TSUS. Under that rule, a specific provision for a part must prevail over a parts provision. In this connection, the provision for control panels in item 685.90, TSUS, is a specific provision for the purpose of application of the headnote. J. E. Bernard & Co. v. United States 59 Cust. Ct. 31, C.D. 3060 (1967).

076339

D1

076339

HOLDING:

In view of the foregoing, the "more than" rule is not applicable since the merchandise is not regarded as an entirety. We find that the instant scanning gantry, power cabinet and patient table are separately classifiable under the provision for X-ray apparatus and parts in item 709.63, TSUS.

The main diagnostic control unit is separately classifiable under the provision for control panels in item 685.90, TSUS. The 1984 column 1 rate of duty required under that provision was 6.5 percent ad valorem. Nothing in this decision should be construed as changing the classification of any ancillary or peripheral equipment the classification of which is otherwise controlled by our classification of the articles which were components of the merchandise which was the subject of C.S.D. 84-37 and that we did not regard as an entirety with an otherwise complete CAT scanning system.

A copy of this decision may be made available to the internal advice applicant.

CLA-2:CO:R:CV:G
076356 PR

Mr. Herbert T. King
Oriental Pacific (U.S.A.) Inc.
475 Fifth Avenue
New York, New York 10017

Dear Mr. King:

This is in reply to your letter of May 23, 1985, concerning the country of origin of certain sweaters partially knit and completely assembled in Hong Kong.

Without samples and more detailed descriptions of exactly what is done in each country, we are unable to definitively respond to your questions. In determining the country of origin of sweaters, the parts of which are knit in two countries with one of those countries also being the assembling country, Customs will apply the criteria set out in the final textile rules of origin, section 12.130, Customs Regulations (19 C.F.R. 12.130), effective April 4, 1985. Utilizing that criteria, we believe that a substantial portion of the garment must be knit in the assembling country for that country to be the country of origin of the sweater.

It is Customs' view that the knitting in the assembling country of a sweater's long sleeves and either the front or back (whichever gives the garment its distinctive character) would clearly make the assembling country the country of origin. In most cases, the knitting of two of the garment's major portions -- e.g. long sleeves, the front, or the back -- in the assembling country will make that country the country of origin. If, of the major portions, only one is knit in the assembling country, then the origin determinations must be made on a case by case basis. In this regard, Customs will usually focus its attention on either (1) the front panel (or panels) on which patterns, fancy work, or other work or features of unusual complexity may be found, or (2) both long sleeves, to the extent they impart a particular visual characteristic to the garment (e.g., raglan sleeves). In some instances, the back panel may also be considered if the back is determinative of the character of the garment. Thus, for example, where only sleeves are knit in the assembling country and are combined with a patterned or fancy front (knit elsewhere) which provides the garment with its main visual characteristic, then the assembling country will normally not be deemed to be the country of origin of the sweater.

076356

D9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In the case of sweaters, the principal portions of which consist of identical fabric with nothing that particularly distinguishes one portion from another, then the assembling country, following the general rule previously stated, will usually be the country of origin if two of the principal portions are knit there. Situations in which less is done are impossible to address without a detailed statement of the applicable facts. Absent such facts, our reaction is that the knitting of only one of the principal portions of such a sweater in the assembling country normally will not result in that country being considered the country of origin unless Customs is presented with evidence establishing that the portion knit there is clearly more significant than the others, considering its complexity, the time and technology involved in its construction, and any other factors which may be relevant.

Sincerely,

(Signed) Harvey B. Fox

New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-002286

This protest was filed against your decision in the liquidation of six 1983 entries covering shipments of hiking boots produced in South Korea.

This ruling concerns the correct classification of the hiking boots.

FACTS:

The merchandise at issue is certain nylon and rubber hiking boots sold under the "Pro-Players" label, styles "Flap Hiker" and "Basic Hiker." A sample of the "Basic Hiker" was submitted along with the protest. Counsel for protestant exhibited a sample of the "Flap Hiker" at a conference at Headquarters. These boots were liquidated under the provision for footwear which is over 50 percent by weight of rubber or plastics or over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics, other footwear, other, other, other, valued over $3.00 but not over $6.50 per pair, in item 700.67, Tariff Schedules of the United States (TSUS).

Counsel for the protestant claims that the merchandise should be classified under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being either rubber or plastics, having uppers of which not over 90 percent of the exterior surface area is rubber or plastics, designed to be

D11

worn over, or in lieu of, other footwear as a protection against water, oil, grease, or chemicals or cold and inclement weather, in item 700.57, TSUS.

ISSUE:

Are these hiking boots designed to be worn as a protection against water, oil, grease, chemicals or cold and inclement weather?

LAW AND ANALYSIS:

Counsel for the protestant argues that the instant footwear was intended to be protective against inclement weather by virtue of the following features:

(1) The waterproof sole and foxing, and waterproof front and rear bumpers;

(2) the packed foam cells on the interior of the upper, lined with nylon tricot;

(3) the gusset tongue; and

(4) the traction soles for use on snow and ice.

Counsel attaches eight affidavits from the importer's retail customers stating that the two boots at issue were purchased for sale during the winter months and that their sales people were advised to sell the boots as protective footwear against cold or wet weather.

Counsel further argues that Customs Headquarters Ruling letter (HRL) 072089 of May 10, 1983, HRL 072175 of August 23, 1985, and New York letter 808574 classified similar footwear as protective footwear.

It is the opinion of Customs that the hiking boots at issue are not designed to be worn as protective footwear but are designed to be athletic-type casual footwear. This conclusion is supported by the athletic designations, names and labels involved — i.e., "Pro-Players," "active sports shoes," "Basic Hiker," "Flap Hiker" and "provide comfort and wear

016391

D12

for the foot in action." The Pro-Players "Flap Hiker," which counsel displayed at the Headquarters conference, appeared October 3, 1985, in a New York Daily News advertisement for athletic shoes which described the "Flap Hiker" as a "nylon sport boot."

Counsel cites HRL 072089 and HRL 072175 for the proposition that protection against cold is sufficient to warrant classification in item 700.57, TSUS. We agree, but the merchandise involved in HRL 072089 and HRL 072175 was quite different from the hiking boots at issue here. In HRL 072175, a substantial fleece lining was present to afford protection against the cold. In HRL 072089, the boot had a water-repellent nylon upper, a tricot synthetic nylon interlining, a foam rubber insulation between the inside and outer fabrics and a pile-lined removable sole to protect the foot. The thin foam of the instant merchandise coupled with its sheer tricot lining offers minimal protection against the elements. HRL 072089 and HRL 072175 do not apply to the instant merchandise because they deal with dissimilar merchandise.

It is also suggested that the hiking boots in question are virtually identical to the footwear which was the subject of New York letter 808574. There are a number of differences between the footwear in New York letter 808574 and the instant merchandise, however:

(1) The present items are marketed as hikers and sports shoes and are marked with such designations.

(2) The boots in letter 808574 were for children, who do not generally participate in the sport of hiking.

(3) The boots in letter 808574 had a fleece-type lining which, in effect, rendered them protective footwear having an athletic look.

(4) The present hiking boots are clearly suitable for year-round hiking, while letter 808574 dealt with items which were clearly designed for cold weather use.

D13

076391

It is argued that the rubber/plastic waterproof bottoms of the hiking boots offer protection against rain or snow. Although the vulcanized foxing band does provide incidental protection up to the top of the band, there is no protection offered against cold or wet for the remaining portion of the shoe. The fabric upper is not treated to resist water, so that the shoe as a whole does not offer protection against the elements.

It is asserted that the foam in the fabric upper affords a greater degree of protection against cold than an uninsulated upper would. This is true, but the foam is so minimal in amount that it serves mainly to provide stability and support to the upper rather than to protect the wearer against the cold.

It is contended that the gusset tongue improves protective ability against cold or inclement conditions. The gusset tongue, however, is located on the nylon portion of the upper which allows water penetration, so no real protection against inclement weather is offered.

Finally, it is maintained that the traction soles improve performance of the hiking boots on snow or ice. This traction sole, however, is common to all hiking shoes, which are ordinarily used to climb on different terrain, trek through mud, or trail-blaze bramble-strewn paths. The performance of the traction soles may be better than ordinary leather soles on snow or ice, but that was not the intent of the designer of the shoes. The hiking boots are suitable for year-round use.

With regard to the affidavits submitted by the protestant's clients, it is conceivable that these shoes could be worn in inclement weather, but their primary function is as casual athletic leisure shoes or as athletic-type hiking boots. The tags and labels on the items make no reference to any protective features but point to casual or athletic use. The only

076391

D14

advertisement presented portrays "Flap Hiker" among other athletic footwear and describes it as a "nylon sport boot." The label inside the tongue refers to these styles as "Pro-Players Active Sports Shoes." The slight tricot foam lining would not influence the purchaser to buy these shoes for warmth.

We find that the instant merchandise is similar to the boots in New York letter 809452 of June 14, 1984, which were classified in item 700.67, TSUS, based on the fact that the thin lining would provide minimal protection against the cold. The present footwear is similar in that it has only a thin foam-backed tricot lining which does little more than provide body to the nylon upper.

Looking at the overall character of the instant hiking boots to determine whether they were designed as protective footwear, we see no physical design features which enable us to distinguish the instant footwear from year-round outdoor shoes. We find that the instant footwear is intended for year-round hiking, athletic or leisure use and that it is classified in item 700.67, TSUS.

HOLDING:

The instant footwear is classified in item 700.67, TSUS. The protest should be denied in full. A copy of this decision letter should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Steven P. Kersner, Esq.
Brownstein, Zeidman and Schomer
1401 New York Avenue, N.W., Suite 900
Washington, D.C. 20005-2102

Dear Mr. Kersner:

In letters dated November 5, 1985, and June 6, 1985, you requested a tariff classification ruling covering a men's overcoat for your client, Winer Industries, Inc. You submitted a sample overcoat along with your letter.

The sample is a men's overcoat, a 3/4 length cold weather coat. The label inside the coat states that the shell is composed of 65 percent polyester and 35 percent cotton, the body lining of 85 percent acrylic and 15 percent wool, the sleeve lining of 100 percent nylon, and a filler of 65 percent olefin and 35 percent polyester. The component of chief value appears to be man-made fibers. The coat has a zipped and snapped full front opening, two upper and lower front pockets, adjustable tabs at the sleeves, and front and rear yokes.

Inserted into the seams of the front yokes are folded strips of textile material approximately 1-3/4 inches in width when folded. These strips function as pocket closures.

Inserted into the horizontal seam of the rear yoke is a folded strip of textile material (a flange) approximately 1-3/4 inches in width when folded. The issue is whether this folded strip constitutes ornamentation for tariff purposes.

You state that the coat is manufactured by the "cut and sewn" method, which allows an extra piece of fabric to be attached to the inner shell. You claim that the coat is manufactured with this extra strip of material in order to give the coat additional strength and warmth. You maintain that this method of manufacture also elimates bulkiness from the garment. You argue that the extra strip of material is primarily functional and utilitarian and that it is not ornamentation.

E2

Along with your letter of November 5, 1985, you submitted an affidavit from the designer of the garment, who maintains that the extra strip of material is designed and constructed to enhance the strength and flexibility of the garment. She claims that it is necessary to have a 1-3/4 inch flange to assure the wearer proper support, strength and flexibility when the wearer is engaged in outdoor activities. Finally, she says that the extra strip of material on the garment is neither designed nor intended to ornament the overcoat, pointing out that the flange is the same color as the overcoat and that it appears on the back of the overcoat.

The addition of the strip of material appears to us to be unnecessary for any functional or utilitarian purpose. The strip is similar to a large piece of piping; it could have been omitted from the coat without any dire consequences. Its size is such that it is not capable of adding much strength or warmth to the coat. The coat would have been slightly less bulky without the extra strip. Any functional aspects of the extra strip of material are purely incidental.

The strip does enhance the appearance of the back of the coat inasmuch as it is more attractive than a simple seam would be. We therefore find that the additional strip constitutes ornamentation for tariff purposes.

The coat is classifiable under the provision for other men's wearing apparel, ornamented, of man-made fibers, not knit, coats, other, in item 381.31, Tariff Schedules of the United States (TSUS), dutiable at the 1985 rate of 34.2 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

P.O. Box 2748
Mobile, Alabama 36652

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1901-4-000032

This protest was filed against your decisions in the liquidations of nine entries covering shipments of baby seats produced in Taiwan.

This ruling concerns the correct classification of the baby seats.

FACTS:

The merchandise at issue is metal baby seats, described on the invoice as "901 High Chairs [7184 Easy Seat]." The broker for the protestant states that the item is "a seat with weight limitations designed for babies and young children. Said seat has spaced arms which can be slipped onto a table, bar counter, or shelf to hold the child during mealtime or any other time when the babytender desires or needs to have the child where he will be safe and visible." She says that although the baby seat is called a high chair, it is not a chair because it has no legs nor pedestal to support it. She claims that the baby seat should be classified under the provision for metal articles not specially provided for, of a type used for household, table, or kitchen use, articles of base metal, of iron or steel, not enameled or glazed, other, other, other, in item 654.00, Tariff Schedules of the United States (TSUS).

E4

The Mobile import specialist liquidated the merchandise under the provision for articles of iron or steel, not coated or plated with precious metal, other articles, other, other, in item 657.25, TSUS. He contends that the baby seats are not chiefly used in the household and therefore are not classifiable as household articles.

ISSUE:

Is the metal baby seat properly classifible as a metal household article or as an other article of metal?

LAW AND ANALYSIS:

The protestant's broker argues that the baby seats should be classified as articles not specially provided for, of a type used for household, table or kitchen use, because she believes that the chief use of the imported article is in the household. She reasons as follows:

(1) The small homes, trailers, and apartments of today limit the space for furniture, therefore this collapsible foldaway seat is most useful in modern homes.

(2) Few relatives or friends keep baby chairs available, but this seat would be ideal for visiting tots.

(3) She called many restaurant supply companies and found none which stocked such an article, just regular high chairs and booster seats.

(4) Similar slip-on seats are available in discount stores, general merchandise stores, and catalogues which cater to family trade.

(5) She eats frequently in restaurants, but she has never seen such a slip-on seat in a restaurant. (She asked several restaurant managers and was advised that only regular high chairs and booster seats were permitted because of the danger of lawsuits.)

(6) The instant seats are ideal for picnic tables in public recreation areas and for the tailgates of trucks and station wagons.

076458

E5

Customs Headquarters Ruling Letter (HRL) 073808 of March 28, 1984, ruled that a similar item, known as "Sitten Pretty," a table-edge seat for infants and children, was chiefly used in restaurants. HRL 073078 stated that: "...we do not believe the article finds its chief or even principal use in the household, that use being only incidental. Its chief use, we believe, would be in restaurants. Absent evidence of chief use in the household, we hold that term inapplicable to the instant merchandise." HRL 073078 held that the aluminum Sitten Pretty seat was classifiable under the provision for other articles of aluminum, currently in item 657.40, TSUS. The instant baby Easy Seats are of iron or steel, lack legs and are quite similar to Sitten Pretty. While the broker's arguments sound reasonable, she failed to submit actual hard evidence as to the chief use of the seats, therefore we find that they are covered by HRL 073808.

We find that the instant baby seats are properly classifiable as other articles of metal, in item 657.25, TSUS.

HOLDING:

The instant baby Easy Seats are classified in item 657.25, TSUS. The protest should be denied in full. A copy of this decision should accompany the CF 19 Notice of Action.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

076463

Mr. Marcus Suggs
Vice President
National Travelware, Inc.
10154 Culebra Road
San Antonio, Texas 78251

Dear Mr. Suggs:

This is in response to your letter of April 20, 1985, which requests binding classification rulings regarding a plastic buckle imported separately and a strip of polypropylene webbing and that same plastic buckle which are combined to form a belt. You also request a ruling with regard to marking of the buckle if it is imported in bulk. Your written submission indicates that the buckle is manufactured in Taiwan and the webbing is a product of the United States. The buckle and webbing will be made into belts in Costa Rica. In an oral amendment to this information, you state that the webbing also is a product of Taiwan.

The sample provided is a plastic buckle and a belt made of woven polypropylene. The buckle has been permanently attached to the belt by a sewing function. The belt is approximately 1.5 inches wide and 48 inches long. The written request for ruling includes no information as to the use of the belt. Evidence in the record indicates that you have made oral representations to the effect that the belt will be used by sportsmen to attach and secure small pouches and other gear. It is presumed that the belt is in chief value of polypropylene textile.

It is the view of this office that the belt will not be chiefly used as wearing apparel, i.e, that which is worn for comfort, decency or adornment, but rather as a means for carrying objects for use by sportsmen or joggers. Accordingly, the belt with buckle is properly classifiable under item 389.62, Tariff Schedules of the United States (TSUS), as articles not specially provided for, of textile materials: other articles, not ornamented: of man-made fibers: other, dutiable at the rate of 8 cents per pound plus 11 percent ad valorem. It should be noted that articles classified under item 389.62 are not eligible for duty-free treatment under the Caribbean Basin Economic Recovery Act (CBERA).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E1

Buckles, when imported separately without the belt, are classifiable under the provision for buckles and buckle slides, and parts thereof, under item 745.45, TSUS. Articles classifiable under item 745.45, TSUS, which are the products of Taiwan, are eligible for entry free of duty under the Generalized System of Preferences (GSP). Such duty-free treatment is conditioned upon compliance with all applicable entry and documentation requirements. Failing GSP qualification, it should be noted that duty rates on articles imported under this item have been temporarily reduced to 4.7 percent ad valorem pursuant to item 947.40, TSUS. This latter provision is in effect for buckles entered on or after January 1, 1985, through December 31, 1985.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 304), and section 134.11 of the Customs Regulations (19 CFR 134.11), require that, unless excepted by law, every article of foreign origin (or its container) imported into the U.S. shall be marked in a conspicuous place as legibly, indelibly, and permanently as the nature of the article (or container) will permit, in such manner as to indicate to an ultimate purchaser in the U.S. the English name of the country of origin of the article, at the time of importation into the Customs territory of the U.S.

The subject buckle, which is claimed to be a product of Taiwan, displays no indication of such origin. Rather the buckle shows the abbreviation N.Y, N.Y. 10018 on its reverse side. In light of the above law and regulation, such marking is inadequate. If imported in bulk from Taiwan, each buckle would have to be marked legibly, indelibly and permanently to indicate such origin.

Sincerely,

John T Reid

Detroit, Michigan 48226-2568

Dear Sir:

This is our decision on Application for Further Review of Protest No. 3801-5-001171. At issue is consumption entry 83-714753, dated May 2, 1983, liquidated November 9, 1984. The merchandise at issue is a ring forging machine from West Germany.

FACTS:

Submitted literature describes a process for producing seamless industrial rings. A billet is surface smoothed, cut to length and rounded if required, after which it is preheated and placed in an upset forging press. This flattens the piece to doughnut shape making it more suitable for subsequent rolling. While in the press the workpiece is center pierced to make a ring blank called a preform. The blank is then preheated again and moved to the rolling machine, the subject of this protest, where it is slipped between an inner roll and a larger, powered work roll. When the powered roll revolves, the free turning inner roll presses against the preform, thinning the ring wall while increasing the inner and outer diameters to make seamless rolled ring forgings. After importation, these are made into gears, bearing races, flanges etc.

The concerned entry was liquidated under the provision for rolling mills and parts thereof, in item 674.20, TSUS, because the described operation was determined by your office to be a rolling process subsequent to forging. Protestant maintains that the proper classification is under

E9

item 674.35, as a metal-forming machine tool because the involved process involves a forging process and the provision in item 674.20 covers mills that produce billets, slabs, bars etc., rather than forgings.

ISSUE;

Whether the subject machine performs a forging function or a rolling function.

LAW AND ANALYSIS:

"Forging" normally involves the plastic deformation of metals at elevated temperatures into desired shapes by compressive forces exerted through a die. "Rolling" normally connotes a process of reducing or changing the cross-sectional area of a workpiece by the compressive forces exerted by rotating rolls. Both are hot working processes. The degree of deformation, in the case of rolling, is measured by the percent reduction in thickness of the workpiece or, in the case of forging, by the percent reduction in cross-sectional area.

Roll forging, a process to which protestant refers in negating the applicability of item 674.20, is described in submitted literature as resembling that performed in rolling mills to reduce, for example, billets to bars. Squeezing the heated product between two rolls reduces its cross-sectional area. The literature suggests that any material that is forgeable by other processes (i.e. drawing, extruding) can be accomodated in a roll forging machine.

In our opinion, the upset forging and center piercing produce a forged product which is then suitable for rolling. Despite protestant's assertion that the rolled ring forging machine is an integral part of the forging process, it must be classified for tariff purposes by function and design, under the tarif provision which most narrowly and specifically describes it.

E10

076479

The provision in item 674.20, TSUS, describes merchandise eo nomine. Such provisions include all forms of the named article, in the absence of a contrary legislative intent, judicial decision, or administrative practice. There are rolling mills used in the making of primary forms of iron and steel (i.e., bar rolling mills), the type to which protestant refers. However, there are also ring rolling mills such as the one here. There is no evidence to indicate that Congress intended to limit the provision in item 674.20 to the former while excluding the latter. In this context the term "mill" is viewed broadly to include individual, single metal-working machines, as well as machines in tandem. Note Customs Cooperation Council Nomenclature (CCCN) Heading 84.44, the language of which is substantially similar to the provision in item 674.20, and materials thereunder. Despite the fact that the subject article is a metal-forming machine tool, it is specifically provided for in item 674.20, TSUS.

HOLDING:

The instant ring forging machine is eo nomine provided for in item 674.20, TSUS. The protest should be denied. A copy of this decision should be attached to the Form 19, Notice of Action, to satisfy the notice requirements of section 174.30(a), Customs Regulations.

Sincerely,

Arthur P. Schaffner

Beverly L. Pevsner, Esq.
Beiley & Pevsner
7600 Southwest 57th Avenue
Suite 107
Miami, Florida 33143

Dear Ms. Pevsner:

Your letter of July 9, 1985, concerns the dutiable status of mixed xylenes. No country of origin was given.

You request a ruling on mixed xylenes containing up to 50 percent by weight ethylbenzene. It is your opinion that such a mixture is considered xylene by the trade.

In a summary of the literature on the subject, it was found that technical publications, such as Mansville Chemical Products Synopsis, indicate that a typical mixed xylene stream could contain up to a maximum of 20 percent ethylbenzene. From a canvass of domestic producers it was found that the typical ethylbenzene content of mixed xylenes was no higher than 25 percent.

Accordingly, it is concluded that mixed xylenes containing over 25 percent ethylbenzene are classifiable as a benzenoid mixture in item 407.16, TSUS. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. The component material with the highest rate is alkylbenzenes classifiable in item 402.36, TSUS, and dutiable at the rate of 0.8 cent per pound plus 17.3 percent ad valorem.

It should be noted that item 407.16 is a GSP item, so that if the product is from a GSP country and all the requirements are met, it would be free of duty.

Sincerely,

John T. Lark

Harvey B. Fox

T. T. Dalgliesh
President
Columbia Games, Inc.
Suite 581-810 West Broadway
Vancouver, BC
Canada V5Z4C9

Dear Mr. Dalgliesh:

In a letter dated July 9, 1985, you inquired as to the dutiable status of certain book materials produced in Canada. Samples were submitted for examination.

The merchandise involved consists of booklets sometimes referred to as expansion modules. These modules are prepackaged game reference materials containing maps and descriptions of fictional worlds, environmental scenarios, character generation and development, and background informational resources for use in fantasy role play games such as Dungeons and Dragons. The booklets can be viewed as aids or accessories to these fantasy games. They provide inspiration, guidelines, game rules and a fantasy world. In effect, they are a base from which game role play can be extended. The modules offer specific features to help introduce gamemaster and players to a game, promote personal development in role play campaigns and suggest further possibilities and situations in the game play.

You point out that the merchandise is presently being classified by U.S. Customs under the provision for game equipment in item 735.20, Tariff Schedules of the United States (TSUS). However, you believe that the merchandise is not a game because the booklets are designed only to be read and are not an independent source of game play. Furthermore, the booklets do not contain rules, gameboards, dice, pawns, etc., or any materials normally associated with games.

It should be noted that in fantasy role-playing games, there is no real winning or losing as such, unless a character is killed. However, there are definable progress levels toward objectives. Within the framework of a given set of rules, players contest and compete by assuming character personalities of fantasy world inhabitants, accumulating points for ingenuity, bravery, confronting obstacles and challenges, avoiding and surviving dangers in a fantasy, hostile environment. Progress is measured in terms of experience levels gained. Survival and self-aggrandizement constitute success in these role playing games.

E13

Although the imported articles are books and can fall within the provision for books, not specially provided for in item 270.25, TSUS, it is our view that the doctrine of relative specificity requires classification of the instant merchandise under item 735.20, TSUS, as game equipment, if in fact the merchandise satisfies the phrase "game equipment."

Generally, the doctrine of relative specificity means that an item will be classified under that provision of the tariff schedules which most narrowly and definitely described it.

Schedule 7, Part 5, Subpart D, Headnote 1, TSUS, provides in part that "This subpart covers equipment designed for indoor or outdoor games, sports, gymnastics, or athletics ***." The issue presented is whether the HARN fantasy game role play booklets constitute equipment within the meaning of that term as used in the cited headnote.

The case of Cruger's (Inc.) v. United States, 12 Ct. Cust. Appls. 516, T.D. 40730 (1925), concerning the classification of polo caps and helmets is relevant to the issue here. In that case the court stated that "The word equipment means things or supplies needed for a special purpose or service... the term 'equipment' includes the necessary adjuncts of a service and imports the outfit needed or required to accomplish a special object or purpose.... Articles which are not necessary or requisite for a special purpose or service and the use of which is dictated by fad, fancy, or fashion, cannot therefore properly be called equipment."

The term "equipment" was construed more broadly in American Astral Corp. v. United States, 62 Cust. Ct. 563, C.D. 3827 (1969), wherein the court stated "for the statutory designation of 'equipment' is satisfied once it is shown that an article is specially designed for use in the game or sport."

Undoubtedly, the subject HARN modules are specifically designed for use as a complement to, or an enhancement of, fantasy role-play game activity. They perform a real function in the actual play of the game. In our opinion the modules are game material and can be defined as game equipment regardless of the fact that the vehicle used to present the material is in book form.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Thomas C. White III
President
Newhit Industries, Ltd.
766 Ouellette Ave.
Windsor, Ontario N9A 1C2
Canada

Dear Mr. White:

You have requested information on the duties applicable to a textile bag with drawstring top to be used in the sale of trademarked "Ron BACARDI Gold Reserve." The bag is to be made of three textile pieces sewn together in Haiti. The legend is embroidered on the front panel of the bag. The bag measures approximately eleven inches by five inches, apparently for the 750 ml bottle. You note that you intend to import bags for all the standard sizes of liquor.

You note that the plan is to construct the bag of parts made in the United States and that brushed or napped knitted man-made fiber fabric will be used. In the alternative, you expect to have the bag constructed of a material in chief value of cotton.

The bag has no substantial use other than in the marketing of the liquor. The embroidery causes it to be ornamented. Therefore, as a textile article, and not otherwise provided for, if in chief value of man-made fibers, it would be classified in item 386.13, Tariff Schedules of the United States, the provision for "Articles not specially provided for, of textile materials: ...other articles ornamented: Other: Other, Of man-made fibers," dutiable at 15 percent ad valorem. This item is eligible for duty-free treatment under the Generalized System of Preferences (GSP) as a product of Haiti upon compliance with applicable regulations.

If the bag is of cotton, whether all cotton or a blend where cotton is in chief value, it would be classified in item 386.04, TSUS, dutiable at 28 percent ad valorem as an ornamented textile article not specially provided for. This item is not GSP-eligible. Neither article, whether of man-made or cotton fibers, is eligible for duty-free treatment under the Caribbean Basin Economic Recovery Act.

F1

With regard to your question on item 807, TSUS, the embroidery operation appears to be an advancement in value or an improvement in condition and would disqualify the panel on which it appears for 807 treatment. However, the remaining panels would be subject to 807 treatment, upon compliance with applicable regulations.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

076603

26 AUG 1985

CLA-2 CO:R:CV:G
076605 JGH

Dear

Your letter of June 25, 1985, to Customs at New York, concerning the dutiable status of a mixture of ethanol and acetaldehyde, has been referred to this office for reply.

You state that you are studying the possibility of importing a mixture of 59 percent ethanol and 41 percent acetaldehyde. Subsequent to importation, the mixture would be processed with the acetaldehyde purified for use as a raw material and the ethanol sold for use as a gasoline blending component.

Prior to August 2, 1985, a mixture such as this probably would have been classified as an organic mixture in item 430.10, TSUS, dutiable at the rate for acetaldehyde of 8 percent ad valorem. However, it is now Customs position that even though the imported product remains classifiable as a mixture, since the ethanol is intended for fuel use, the mixture would be dutiable under item 427.88, TSUS, at the rate of 3 percent ad valorem plus 60 cents per gallon under item 901.50, TSUS.

Sincerely,

(signed) J. T. Roth

076674 JGH

[redacted]

Dear [redacted]

Your letter of July 10, 1985, to the Customs port at New York has been referred to this office for reply.

You request that a mixture of about 92.5 percent ethanol with 7.5 percent toluene or benzene, intended as an octane enhancer for motor fuel, be classified as a mixture in item 432.10, TSUS, subject only to a 5 percent ad valorem rate of duty.

Prior to August 2, 1985, mixtures of this type were classified under the provision for mixtures of fuel grade ethanol in item 432.10, TSUS, with a 5 percent rate of duty. However, this issue has been reviewed and it is now Customs position that such a mixture, while still classifiable as a mixture, would also be subject to a duty of 60 cents per gallon under item 901.50, Appendix to the Tariff Schedules, since the ethanol mixture is, in fact, intended for fuel use. Therefore, an ethanol mixture of this type would be classifiable in item 432.10, TSUS, and dutiable at the highest component rate, which in this case is the rate for item 427.88, of 3 percent ad valorem plus 60 cents per gallon under item 901.50.

Sincerely,

(Signed) J. T. Roth

Mr. Ron Sias
RSW International, Inc.
80 Wall Street
New York, New York 10005

Dear Mr. Sias:

Your letter dated July 2, 1985, addressed to our New York office concerning the dutiable status of a three piece luggage set produced in Taiwan, has been referred to this office for a direct reply to you.

The set identified as style No. 84-157 consists of a 26 inch pullman, a 22 inch carry-on and a garment bag. Samples of each piece of the set have been submitted along with detailed individual component material value breakdowns.

The issue involved here is whether the value of the leather components is to be disregarded in determining the component material of chief value of the luggage samples.

Schedule 3, Headnote 3(a), Tariff Schedules of the United States (TSUS), provides that "applique work, beads, bugles, spangles, bullions, and other forms of nontextile ornamentation applied to a textile fabric or other textile material shall be disregarded in determining the component material of chief value of such fabric or other article."

It is our view that the name patches on the three items of luggage constitute applique work which is to be disregarded in determining the component material of chief value of the luggage.

In order to constitute ornamentation for tariff purposes, the courts have held that a feature must enhance, adorn, decorate, or embellish an article (Blairmoor Knitwear Corp. v. United States, 60 Cust. Ct. 388 (1968) in an acceptable trade sense (Rifkin Textiles Corp. v. United States, 62 Cust. Ct. 316 (1969)). The feature must be more than merely incidentally decorative (Endicott Johnson Corp. v. United States, 82 Cust. Ct. 49 (1979)) and its ornamental character must outweigh any functional purpose it may serve (Blairmoor, supra).

The remaining leather features present on the luggage are not considered ornamentation for tariff purposes because their functional purposes outweigh their ornamental characteristics or they are not decorative in a commercially meaningful manner. As a result their value should be included in a chief value determination.

If the pieces comprising the set are in chief value of leather, they would be classifiable under the provision for luggage of leather other than reptile leather in 706.13, TSUS, and dutiable at the rate of 8.5 percent ad valorem.

However, if the pieces are in chief value of textile material, they would be classifiable under the provision for luggage of other textile materials in item 706.4152, TSUS, and dutiable at the rate of 20 percent ad valorem. The applicable textile quota number is 670. Inasmuch as the pieces are products of Korea, they would be subject to textile quota restriction.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: NOV 21 1985

FILE: CLA-2 CO:R:CV:G
076713 LDD

076713

TO : District Director of Customs
Buffalo, New York 14202

FROM : Director, Classification and Value Division, Headquarters

SUBJECT: Request For Internal Advice 61/85 On Interlining Fabric From Canada

This internal advice request concerns the tariff classification of interlining material used to provide body to the shoulder area of men's suit and sport jackets. It is a woven fabric having a 100 percent cotton warp and 100 percent polyester fill.

It is your indication that a visit to the factory where this material is produced showed that the material is sprayed with a plastic resin which appears to visibly impart a stiffness, as indicated by the "before" and "after" samples submitted. The coating is applied to aid shrinkage control and to help interlock the warp and filling yarns. It has been established that the man-made polyester is the component fiber of chief value. The only issue to be decided is whether the fabric is coated or filled.

It is our determination that in light of T.D. 81-219, the coating on this fabric imparts a noticeable stiffening effect which would allow a finding that this is a coated or filled fabric for tariff purposes. Accordingly, because this material is determined to be in chief value of a man-made fiber, it would be classifiable under the provision for same, coated or filled with rubber or plastics, in item 355.82, TSUS.

076717

Mr. John I. Stofko
President
Carbocol Inc.
P.O. Box 5483
Beaverton, Oregon 97007

Dear Mr. Stofko:

This is in reply to your undated letter received in Headquarters in early August, 1985, regarding the classification of "Carbocol". You submitted additional information to New York Customs on December 10, 1985. That information was forwarded to Headquarters on December 25, 1985.

You indicate that Carbocol, Inc. intends to enter raw sugar into a foreign trade zone (FTZ) at the Port of Portland, Oregon. At the FTZ, four different formulas, trade-named Carbocol, will be created by artificially mixing the raw sugar with United States manufactured chemicals.

You indicate that the formulas are new technology applied to any kind of wood bonding such as in plywood or composite board production and that "Carbocol" is a sugar (or starch) to which an acidic catalyst, buffer, stabilizing or otherwise modifying agent is added and that it is not a glue, adhesive, plastic, thermoplastic or thermosetting resin. You suggest that classification should be in item 155.40, Tariff Schedules of the United States (TSUS).

This tariff item provides for sugars, syrups, and molasses, derived from sugar cane or sugar beets which contain over 6 percent by weight soluble non-sugar solids. However, the statutory language of this provision specifically prohibits including any foreign substance in the 6 percent portion which has been added or developed in the product. Since the aluminum sulfate, sodium hydroxide, and the ammonium sulfate are foreign substances which have been added, classification under item 155.40, TSUS, would be precluded.

F8

In the instant matter, various formulas ranging from a low of 61% raw sugar to a high of 90% raw sugar are mixed with various chemicals to reach a total of 100%. According to information which you furnished, "Carbocol would be shipped from the Free Trade Zone to wood products manufacturers for application as binder."

The submitted United States Patent renders an explicit description of how Carbocol is utilized to bond materials such as wood in the manufacture of plywood and board from particulate wood. In manufacturing such products, the Carbocol replaces the traditional adhesives, and forms a bond between pieces of wood that is at least comparable to the strength of bonds achieved by hitherto used adhesives.

In the manufacture of plywood, for example, it is only necessary to cover a surface of a wood veneer with Carbocol, bring such surface into contact with the surface of another veneer which may or may not have a coating of the bonding composition so that there is an interfacial layer of the bonding composition between the surfaces to be bonded, and press them at an elevated temperature. Similary, various forms of wood particles, coated with Carbocol, can be so pressed under heat in order to produce various boards.

In its imported condition, Carbocol is a composition that falls within the tariff description of a cement (adhesive). It is a substance capable of holding materials together by surface attachment even though it is used ordinarily in solution and under the application of heat, and it is not imported in the form in which applied. It is classifiable under the provision for cements, not specially provided for, in item 494.60, TSUS, with a 1986 rate of duty of 2.2 percent ad valorem.

We suggest you contact Mr. John Da Ponte, Executive Secretary, Foreign Trade Zones Board, U.S. Department of Commerce, Room 1519, Washington, D.C. 20230, in order to determine the permissibility of this proposed operation in a foreign trade zone.

Sincerely,

Arthur P. Schaffner

Mr. C. Arnone
Manager
ICA Americas, Inc.
Wilmington, Delaware 19897

Dear Mr. Arnone:

Your request of July 11, 1985, for the proper classification of a product known as Peek Grade 380, a benzenoid thermoplastic resin which you propose to export to Europe to be processed by filtering, has been referred to us for reply.

You state that the foreign processing will consist of melting the exported resin and filtering out certain unwanted gels and black specks from the molten material. The removal will make the resulting product suitable for most critical wire coating applications and will increase the particle size. Previously its use was limited to thick coatings and non-critical wire coatings.

The issue presented by your request is whether Peek Grade 380 is properly entitled to tariff treatment under item 806.20, Tariff Schedules of the United States (TSUS), which provides for articles returned to the United States after having been exported for repairs or alterations.

Customs has previously ruled that distillation of a chemical results in a new and commercially different product from the undistilled chemical thus making the distilled product ineligible for treatment under item 806.20, TSUS.

We are of the opinion that the foreign processing renders the new grade of Peek Grade 380 a new and different product with new improved uses and characteristics. These changes would preculde tariff treatment as an alteration under the provisions of item 806.20, TSUS.

F10

The returned product would be classifiable as a benzenoid thermoplastic resin in item 408.88, TSUS, and fully dutiable at the 1986 rate of 6.7 percent ad valorem.

Sincerely,

Arthur J. Scheffler

Alpac Marketing Services, Inc.
10 Presidential Boulevard, Suite 203
Bala Cynwyd, Pennsylvania 19004

Dear Mr. Rosenthal:

Your letter of August 9, 1985, concerns the dutiable status of 4 xylene streams containing varying amounts of ethylbenzene.

Stream (1) is said to contain 17 percent ethylbenzene; (2), 29 percent ethylbenzene; (3), 24 percent ethylbenzene; and (4), 35 percent ethylbenzene.

A review of the literature on xylenes reveals that the streams almost always contain some ethylbenzene. The Mansville Chemicals Products Synopsis indicates that a typical mixed xylene stream could contain up to a maximum of 20 percent ethylbenzene. The Dewitt Spec Book of Chemical Product Specifications also indicates a maximum of 20 percent ethylbenzene. From domestic producers it was indicated that the typical ethylbenzene content of mixed xylenes was no higher than 25 percent.

Accordingly, it is concluded that mixed xylenes should contain no higher than 25 percent ethylbenzene. Therefore, the classification of the streams you list would be as follows:

	Streams	TSUS Items	Rate of Duty
(1)	17 percent ethylbenzene	401.74	Free
(2)	29 percent ethylbenzene	407.16 (402.36)	0.8 cent per pound plus 17.3 percent ad valorem
(3)	24 percent ethylbenzene	401.74	Free
(4)	35 percent ethylbenzene	407.16 (402.36)	0.8 cent per pound plus 17.3 percent ad valorem

F12

It should be noted that item 407.16 is a GSP item, so that if the product is from a GSP country and all the requirements are met, the product would be free of duty.

You note that all the above streams meet either ASTM D 843 or 845. We also recommend that mixed xylenes meet the specifications for Nitration Grade Xylene (ASTM D 846) or Ten-Degree Xylene (D 486).

As to the other product, the C_9/C_{10} stream from Portugal, it would be classified as a benzenoid mixture in item 407.16, TSUS.

Sincerely,

John T. Lail

District Director of Customs
Boston, Massachusetts 02110

Dear Sir:

Re: Decision on Application for Further Review of Protest Nos. 0401-4-000931 and 0401-4-000932

Protest No. 0401-4-000932 was filed against your decision in the liquidation on September 14, 1984, of entry No. 84-346106-8 dated August 20, 1984, covering a shipment of women's athletic footwear. The file on Protest No. 0401-4-000931 was not forwarded to Headquarters.

FACTS:

The merchandise involved in Protest No. 0401-4-000932 consists of women's athletic footwear. Customs classified this merchandise under the provision for "other footwear: other: other" in item 700.95, Tariff Schedules of the United States (TSUS). Protestant claims that this merchandise is in chief value of leather and should be classified under the provision for leather footwear in item 700.35, TSUS.

ISSUE:

Whether this merchandise is classifiable under the provision for other footwear in item 700.95, TSUS, or under the provision for leather footwear in item 700.35, TSUS.

LAW AND ANALYSIS:

The component material breakdown for the footwear involved in this protest establishes that it is in chief value of rubber and plastic.

076761

Specifically, the cost breakdown submitted shows that $1.43 is attributable to rubber and plastics while $1.31 is attributable to leather. The $1.43 figure is the sum of the costs associated with rubber and plastics ($1.28) plus EVA and outsole cementing ($.15). Thus, classification in item 700.35, TSUS, is not appropriate. In addition, classification in item 700.35, TSUS, is not appropriate since the merchandise consists of women's footwear and item 700.35, TSUS, is a provision for men's footwear.

HOLDING:

In view of the foregoing, the merchandise involved in Protest No. 0401-4-000932 was properly classified in item 700.95, TSUS. You should deny this protest in full. With regard to Protest No. 0401-4-000931, assuming that the merchandise is identical to that involved in Protest No. 0401-4-000932 and that the protest was properly filed we would reach the same conclusion.

A copy of this decision should be attached to the Form 19 Notice of Action to be sent to protestant.

Sincerely,

Arthur P. Schaffner

District Director of Customs
301 South Ashley Drive
Tampa, Florida 33602

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1801-4-000020

This protest was filed against your decisions in the liquidation on February 6, 1981, of entry No. 79-908839 dated August 10, 1979, entry No. 79-905768 dated May 1, 1979, and entry No. 79-907774 dated July 2, 1979.

FACTS:

Certain Finalist canvas upper tennis shoes, style No. 951 (men's) and style 950 (women's), were classified in liquidation under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics in item 700.60, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 20 percent ad valorem.

Pursuant to Schedule 7, Part 1, Subpart A, Headnote 3(h), TSUS, style No. 951 (men's) and style No. 950 (women's) covered by entry No. 905768 were appraised on the American selling price of the Uniroyal Court Ace U-Throat which was $11.00 less 2 percent (men's) and $10.15 less 2 percent (women's). The same styles covered by entry Nos. 908839 and 907774 and exported after June 1, 1979, were appraised on the American selling price of the same domestic shoe which was $12.00 per pair less 2 percent (men's) and $11.00 per pair less 2 percent (women's).

62

The protestant maintains that the imported footwear is not legally similar to the domestic prototype and, therefore, is not subject to American selling price appraisement for the following reasons:

(1) The Uniroyal Court Ace and the imported footwear are markedly different in material and construction.

(2) The Uniroyal Court Ace was sold in different channels of distribution than the imported footwear.

(3) The imported footwear and the domestic prototype were sold in different types of stores and to different types of purchasers and did not compete with each other.

The protestant also makes the following arguments against American selling price appraisement in this instance:

(1) There was no like or similar domestically produced article being freely offered for sale for domestic consumption to all purchasers in the principal market of the United States in the ordinary course of trade and in the usual wholesale quantities at the time the merchandise was exported.

(2) No domestic producer has ever certified a price it would have received for such merchandise when sold for domestic consumption in the ordinary course of trade and in the usual wholesale quantities at the time of exportation of the imported articles.

(3) The appraisement is invalid because Customs failed to comply with the notice requirements of section 152.24, Customs Regulations. See HRL 069080.

The protestant claims that the entries were liquidated more than one year after the date of entry in contravention of Section 504, Tariff Act of 1930. Also, if liquidation was extended, such extension was implemented without notice to the surety in violation of section 159.12(b), Customs Regulations.

The protestant also claims that the demand on surety for payment of additional duties resulting from liquidation of the subject entries is unenforceable by reason of the equitable doctrine of laches.

G3

Specifically, it is alleged that there was an unreasonable delay between the payment of estimated duties and the liquidation of the subject entries which resulted in the demand for additional duties.

ISSUE:

1. Was the Uniroyal Court Ace U-Throat freely offered within the purview of section 402a(g), Tariff Act of 1930, as amended?

2. Is the imported footwear legally similar to the Uniroyal Court Ace U-Throat?

3. Did Customs fail to comply with the notice requirements of section 152.24, Customs Regulations?

4. Are entries liquidated by operation of law in regard to a surety on those entries if Customs fails to send that surety notices of extensions of the liquidations of those entries as required by section 159.12(b), Customs Regulations?

5. Was Customs guilty of laches because of the delay between the payment of estimated duties and the liquidation of the subject entries which is said to have resulted in the demand for additional duties?

LAW AND ANALYSIS:

With respect to the claim that the Uniroyal Court Ace U-Throat was not freely offered and that its price was not certified, it is to be noted that pursuant to section 152.24(c)(1), Customs Regulations, Uniroyal has certified the price at which they freely offer their shoes to all purchasers in compliance with sections 402 and 402(a), Tariff Act of 1930, as amended. It is also to be noted that the protestant has failed to produce any evidence which would substantiate their allegations.

For the purpose of determining similarity in American selling price cases, four tests have been used as guides: (1) similarity of material; (2) commercial interchangeability; (3) adaptability to the same use; and (4) competitive character.

It is our observation that the evaluations provided by the experts are basically contradictory. Mr. M. S. Field, the president of the importing firm considered the Court Ace to be "vastly superior" to the import in his letter dated March 28, 1980. Robert Chase of the Keds Corp. states that the Court Ace is "more durable and provides a longer service life" and has a superior fit than the import in his January 1983 affidavit. However, S. T. Harrison of the Keds Corp. disparages the Court Ace as a "non-performance canvas shoe and marketed as casual foot covering."

The fact that Uniroyal carried the Court Ace in the Pro Keds line, which contains unquestioned serious athletic shoes instead of their Keds or Uniroyal lines, indicates that Uniroyal was trying to sell this shoe to tennis players. We do not consider the shoe section of a tennis pro-shop to be a different channel of trade than the athletic shoe area of a department store, but to be a segment of the same athletic footwear channel of trade.

As to similarity in material and construction, both the imported shoes and the domestic prototypes are tricot lined and have injection molded bottoms. However, the import is of stitched shell molded construction while the domestic shoe is of superior simultaneous molded construction. Both the imported models and the domestically produced models have two-piece stitched uppers and synthetic rubber soles.

It is our view that the differences noted by the protestant are either minor or of no interest or imperceptible to potential purchasers. For these reasons we do not consider them significant enough to preclude a finding of similarity.

197670

G5

We do not agree with protestant's claim that the appraisement is invalid because Customs failed to comply with the notice requirements of section 152.24, Customs Regulations. First, Mr. Field, president of "the Finalist" informed Mr. William Ingersoll of our Tampa office in a letter dated October 29, 1979, that "when I was first notified of this matter by Mr. Roc (sic) in New York, we contacted him and he told us the shoe they were comparing it against." Secondly, the protestant did receive notice of the Area Director's determination of American selling price through our Tampa office as he concedes in the cited letter to Mr. Ingersoll.

The issue of whether failure to notify the surety of extensions of liquidations renders the liquidations null and void and requires that the entries be liquidated as entered is currently the subject of a court action (Old Republic Insurance Company v. United States of America, Court No. 83-10-01450).

It is our position that failure to notify the surety of extensions of liquidations does not invalidate either the extensions or Customs' final liquidations. Consequently, the surety would be liable under its bond for any additional duties owed on liquidation.

The protestant's claim that the demand on the surety for payment of additional duties is unenforceable by reason of the doctrine of laches is without merit. Laches has been defined as an inexcusable, unreasonable, or prejudicial delay in the assertion of a right to the disadvantage or injury to another. It is our view that the delay between payment of estimated duties and liquidation of the entries was not unreasonable and did not cause injury to the protestant.

The protestant has asked that in the event Customs decides not to approve this protest that it withhold action on such protest pending a court decision in the case of Old Republic Insurance Co. v. United States, Court No. 83-10-01450. Inasmuch as the actual trial of the issue has not commenced, we will not withhold our decision in this matter.

HOLDING:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

076818

This decision concerns the country of origin of roofing nails in coil or cartridge form for use in nailing machines.

ISSUE:

The issue in this matter is whether nails made in Japan but joined together in coils or cartridge form in Hong Kong for use in nailing machines may be regarded as products of Hong Kong for the purpose of avoiding the application of voluntary export restraint agreements with Japan to the merchandise.

FACTS:

Galvanized wire roofing nails completely finished with points, barbs and heads are manufactured in Japan and exported to Hong Kong. In Hong Kong the nails are processed through a proprietary high speed welder collator. In this process, 120 nails are joined by two parallel wires. The nails are also coated with a chemical which is described as providing them with a high degree of anti-withdrawal, and the nails are then rolled up into coils which are packaged. A submitted cost analysis shows that 45 percent of the value of the final product is added in Hong Kong.

LAW AND ANALYSIS:

The Customs Service has had occasion to review and discuss the concepts involved in substantial transformation in different contexts recently. See C.S.D. 84-17, C.S.D. 85-47, and T.D. 85-158. These decisions, together with the administrative and judicial precedents cited therein, contain informative discussions of the doctrine of substantial transformation thereby making extensive additional discussion at this time unnecessary.

68

In a nutshell, in order for a substantial transformation to be regarded as having taken place a new article must emerge from a manufacturing process which has a new name, character and use. Value added in the process, while a legitimate consideration, is not the sole criterion, particularly if finding the country where the processing occurs is the country of origin will mislead the public.

With respect to the instant situation, the merchandise produced in Japan is nails. Except for a change in color, the nails themselves remain unchanged during the Hong Kong processing into coils. They still emerge as nails and are ultimately used as nails to join the very same materials they would join if they were not provided in coil or cartridge form. The sole difference is that in one form the nails are for a roofer using a conventional hammer and in the coil form are for a roofer using a nail hammering machine. Further, although also not a single determining criterion by itself, the nails whether or not in coil form are classifiable under the same applicable TSUS nail provision and subject to the same rate of duty.

HOLDING:

For the purpose of the application of voluntary export restraint agreements the described nails which in their condition as imported are packaged in coils for use in nailing machines would not be regarded as a product of Hong Kong. However, it is our further finding that in reporting

819670

quantities for statistical purposes, the weight of joining wires may be subtracted from the aggregate weight, and only the weight of the nails themselves reported.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

John B. Pellegrini, Esq.
Ross & Hardies
575 Fifth Avenue
New York, New York 10017

Dear Mr. Pellegrini:

This is in response to your letters dated August 21, 1985, and September 19, 1985, concerning the appropriate tariff classification of boys' and girls' outerwear to be manufactured in Korea. Samples of the garments to be imported were provided along with your inquiries.

The samples are composed of a nylon shell, a nylon lining and have an eight ounce polyester fiber-filled insulation. The garments feature a collar and a 12 inch zippered opening at the right side seam. The garments also feature pockets at the waist and on the breast and elasticized wrists and waistband. The garment which was the subject of your August 21, 1985, letter features a V-neck opening while the garment which was the subject of your September 19, 1985, letter features a zippered opening at the neck. You indicate that the importer intends to alter these garments subsequent to importation by creating a full front opening and inserting a zipper.

The question presented by your inquiry is whether these garments are classifiable as pullovers as you urge in item 381.9838, Tariff Schedules of the United States (TSUS), if boys, and item 384.9405, TSUS, if girls, or as unfinished jackets in item 381.9530, TSUS, if boys, and item 384.9155, TSUS, if girls. Customs has recently ruled in Headquarters Ruling Letter (HRL) dated April 25, 1985, file No. 075657 that pullover garments similar to those at issue but not featuring front or side zippers did not have a commercial reality as pullover jackets in their condition as imported and were, therefore, properly classifiable as unfinished jackets.

It is our view that the sample with the V-neck opening and no front zipper has no commercial reality as a pullover and that the sample with the front zipper does have a commercial reality as a pullover as evidenced by similar garments which you purchased and presented to us. A garment of the weight of these garments would not feature an open V-neck opening without a closure. This conclusion is supported by an examination of the purchased garments that you submitted as well as the extract from "Nordic Trade" magazine which depicts a heavyweight pullover with side and front zippers.

G11

In view of the foregoing, the sample with the V-neck opening and no front zipper is classifiable as an unfinished jacket in item 381.9530, TSUS, (category 634) if boys, dutiable at the rate of 17 cents per pound plus 27.5 percent ad valorem and item 384.9155, TSUS, (category 635) if girls, dutiable at the rate of 19 cents per pound plus 27.5 percent ad valorem. The sample with the front zipper is classifiable as a pullover in item 381.9838, TSUS, (category 659) if boys, dutiable at the rate of 8 cents per pound plus 20.5 percent ad valorem and item 384.9405, TSUS, (category 659) if girls, dutiable at the rate of 8 cents per pound plus 20.5 percent ad valorem.

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox

Mr. Roy Parsons
Cincinnati Milacron
Plastics Machinery Division
4165 Halfacre Road
Batavia, Ohio 45103

Dear Mr. Parsons:

In your January 23, 1985, letter to the Regional Commissioner of Customs, New York, you inquire as to the tariff classification of certain partly finished platens from unspecified foreign countries. Blueprints, photos and other materials were submitted.

These platens or press blocks are flat plates for use in the clamping unit of a plastics injection molding machine. The literature indicates that, as used in the clamping units of the 250 ton and 1000 ton molding machines, these carbon steel platens vary in size from 38 inches by 38 inches, 65 inches by 65 inches, 79 inches by 63 inches, up to 65 inches by 85 inches. They enter the U.S. with large holes rough drilled in their middle, apparently to facilitate positioning of the platens so that, after importation, additional holes can be drilled. The drilling of the holes prior to importation also saves freight charges and you receive scrap credit for the holes.

After importation, the platens' surface areas will be milled 1/2 inch on all sides and the center holes will be precision machined from a minimum 3 inches to a maximum 18 inches in diameter, to achieve final dimensions. In addition, both moving and stationary platens used in the 250 ton machine will require 98 additional threaded holes while the moving platens will require 13 knockout holes of one size and 10 of another size. The 100 ton machine will require platens with 188 additional threaded holes of one size and 29 slightly larger holes. The various holes, including the center holes, are precision drilled to accomodate tie rods, for attachment of the molds, and for knockout of molded articles.

In accordance with accepted principles of Customs law and interpretation, a tariff description for an article covers such article, whether assembled or not assembled, and whether finished or not finished, unless the context of the particular provision requires otherwise. In our opinion, the center hole punching sufficiently advances the platens beyond the tariff definition for Plates and sheets, in Schedule 6, Part 2, Subpart B, Headnote 3(g), Tariff Schedules of the United States (TSUS). Hole

613

punching is not among the permitted advancements listed in Part 2, Headnote 1, TSUS. Consequently, the merchandise is advanced beyond the status of a basic shape or form.

Item 678.35, TSUS, is a provision covering machines used for molding or otherwise forming rubber or plastics articles, and parts thereof. A tariff provision covers an article or parts thereof whether finished or unfinished. In order to be considered for tariff purposes as unfinished parts of injection molding machines, the platens must be shown to have been advanced or dedicated to a point where their use as the article or part of the article or class of articles provided for is clear, or their utility for any other possible purpose has been destroyed. The center hole drilling is believed sufficient in this regard. In our opinion, the condition of the platens as imported is such that they are dedicated to and commercially fit for use only as parts of injection molding machines, and are clearly recognizable as such, in unfinished form.

The subject articles would be classifiable in item 678.35, TSUS, dutiable at the rate of 4.3 percent ad valorem.

Sincerely,

Arthur P. Schaffner

WASHINGTON

24 OCT 1985

REFER TO

CLA-2:CO:R:CV:G
076879 PR

076879

This ruling concerns the determination of the country of origin of certain shop towels.

ISSUE:

The issue presented is whether the processing of the subject merchandise in Cyprus is sufficient to change the country of origin of Chinese fabric.

FACTS:

A sample of the subject merchandise was submitted. It is a coarse woven rectangular shaped cotton fabric that measures 17-3/4 inches by 27 inches. The edge along one of the long sides of the fabric is a selvage edge. The other three edges are finished by overlocking stitching. According to the inquirer, the fabric is woven in China and shipped to Cyprus. In Cyprus the fabric is cut to size with special machines, the nonselvage edges are overlocked, and the merchandise undergoes linking, stamping, and packing. We are not aware of what the linking and stamping consist of, however, they do not appear to have a major impact on the merchandise. The machinery utilized in Cyprus is stated to be (1) yarn folding machines, (2) cutting tables, and (3) fifteen special Yamato sewing machines. The work will be performed by twenty operators, of which fifteen will be required to be skilled workers.

A3

LAW AND ANALYSIS:

In accordance with Section 12.130(b), Customs Regulations (19 CFR 12.130(b)), merchandise is a product of a particular foreign country if it is wholly the growth, product or manufacture of that foreign country, or, where it is processed in two or more countries, it is a product of the country in which it last underwent a substantial transformation. A textile or textile product is considered to have undergone a substantial transformation if it has been transformed by means of substantial manufacturing or processing operations into a new and different article of commerce.

In regard to the subject merchandise, the fabric which was woven in China may have uses other than shop towels, however, such uses would appear to be very limited. The substantive operations or processing performed on the merchandise in Cyprus appear to be fairly simple cutting and overlocking operations. These are minor when compared with the weaving operation performed in China and do not change the character of the fabric. Essentially all that is done in Cyprus is the sectioning of the fabric into rectangles.

HOLDING:

In view of the foregoing, it does not appear that the subject merchandise has undergone a substantial transformation (i.e., a new and different article of commerce resulting from

076879

a substantial manufacturing or processing operation) in Cyprus. Accordingly, the merchandise is a product of China for tariff purposes.

076893

District Director of Customs
127 N. Water Street
Ogdensburg, New York 13669

Dear Sir:

Re: Decision on Protest and Application for Further Review of Protest No. 0712-5-000150, dated January 22, 1985

This protest was taken against your decision in the liquidation on October 26, 1984 of entry 08-84-489316 made August 15, 1984 and the liquidation on October 30, 1984 of entry 08-85-494142 made October 22, 1984. This protest concerns the classification of catalog number 10-910, Plastic Pattern Blocks.

ISSUE:

The protestant claims that the blocks are properly classified under the dual provisions in items 774.5595/ 960.70 Tariff Schedules of the United States Annotated (TSUSA). Item 960.70 is a duty-free provision. The rate of duty under item 774.55 is 6.5 percent ad valorem.

Item 960.70 provides for "Patterns, models (except toy models), globes, and wall charts of an educational, scientific or cultural character; mock-ups or visualizations of abstract concepts such as molecular structures or mathematical formulae; materials for programmed instruction; and kits containing printed materials and audio materials and visual materials or any combination of two or more of the foregoing (however provided for in schedules 1 to 7)." Item 774.55 is the provision for "articles not specially provided for, of

A6

rubber or plastics: Other: Other." If 960.70 applies, the entries should be duty-free. If it does not, both you and the protestant agree that the proper classification is as articles, n.s.p.f. The issue, therefore, is whether any of the provisions in 960.70 describe the instant merchandise.

FACTS:

The instant merchandise is described in the manufacturer's catalog as "Plastic Pattern Blocks" for use in schools "for investigating geometric forms and relationships, to explore symmetry, congruence and angle measure." The set of plastic blocks "consists of 250 pieces of six shapes and six colors and includes two flexible plastic mirrors."

There is agreement that these blocks are apt to be used in an educational setting and that they would be useful as a teaching device. Also, the manufacturer's catalog shows a variety of educational supplies described and presented to provide evidence that the merchandise is not a toy or game, but, rather, an instructional device. Some of these articles have been eligible for duty-free treatment under item 870.30, TSUS.

LAW AND ANALYSIS:

The protestant argues in part that the Nairobi Protocol to the Florence Agreement is designed to permit duty-free entry of educational, cultural, or scientific materials. Therefore, it is argued, item 960.70, Appendix to the TSUS, should apply.

076893

A7

We agree that item 960.70 is intended to cover goods of an educational, scientific and cultural character, but we do not understand the language to cover all goods of an educational, scientific or cultural character. Instead, we are limited by standard principles of statutory construction to apply only the words and phrases contained in the provision and nothing more.

A close reading of the language of item 960.70 fails to find words to describe the plastic blocks. They are not patterns, globes or wall charts, nor are they mock-ups or visualizations of abstract concepts such as molecular structures or mathematical formulae. Even though the manufacturer calls the product a pattern, it is not a pattern in the sense of a model from which something else can be made. Moreover, there is no evidence that they are materials for programmed instruction and they do not constitute kits with the required combination of video, audio, or printed materials. By contrast, see our ruling no. 073085, dated May 29, 1985, pertaining to kits under this provision.

The additional claim that these materials may have been eligible for classification in item 870.30, upon presentation of the proper certificate, is not relevant to classification in item 960.70. These two items are not co-extensive, as may be seen by a comparison of the language.

076893

AS

HOLDING:

The plastic pattern blocks should be classified in item 774.55. You should deny the protest. A copy of this decision should be returned to the protestant along with the Customs Form 19.

Sincerely,

Arthur P. Schaffner

New York, New York 10017

Dear Mr. Pratch:

You asked our New York office whether an incomplete work boot from South Korea would be considered a shoe or a shoe upper. A sample was supplied along with your letter. Both your inquiry and your sample were transferred to this office.

The item in question consists of a six-inch high, leather, seven-eyelet, tie boot upper which has been fully lasted to a cardboard insole and has a plastic welt strip sewn to a lip on the insole. A triangular piece approximately 3-3/4 inches long and 3/4 inches wide at its widest point has been excised from the insole and sponge sockliner in the heel area.

The issue presented is whether this item is classifiable as unfinished footwear in item 700.35, Tariff Schedules of the United States (TSUS), or as an upper (a part) in item 791.27, TSUS. Inasmuch as the article has achieved its final size and shape, is easily recognizable as an article of footwear, and needs only the addition of an outsole and filler for the wedge-shaped cut-out in the heel area in order to become complete footwear, the only question remaining is whether the triangular hole prevents the article's classification as unfinished footwear.

In T.D. 79-100, 13 Treas. Dec. 247 (1979), it was held that lasted leather uppers are to be classified as unfinished footwear when the fundamental character of the footwear has been attained. T.D. 79-100 also stated that lasted leather footwear provides a layer or two of protection between the foot and the flooring. Subsequent rulings have stated that uppers requiring backpart lasting in which a piece of material was absent from the midsole or insole did not provide the layer of protection required by T.D. 79-100. However, Customs Headquarters Ruling Letter (HRL) 073078 dealt with an upper having a slit under the heel in which only sewing (and no additional material) was required to close the bottom. In that case, it was ruled that such an item was fundamentally no different from one in which the sewing was performed prior to importation, therefore the item was held to be unfinished footwear.

A10

TO THE

The common element in the prior rulings was that the items involved were tubular moccasin-type uppers in which a piece of leather formed the midsole/insole and also turned up to form part of the upper as well. This represents an important distinction from the instant item in which the upper has been lasted to a cardboard insole (i.e., the instant upper is formed, pulled tight over a last, and is sewn to the insole while affixed to the last). Therefore, unlike the tubular moccasins which were to be backpart lasted in the United States, there is no shaping, working, shrinking or other forming that takes place on the instant article during the finishing operation in the United States. The boot is fully lasted in its imported condition and will be merely held in place on a last while bottoming takes place.

It is our view that the wedge-shaped hole, which serves no utilitarian function, does not prevent this article from being classified as unfinished footwear. Unlike the above-mentioned tubular constructions, the hole does not facilitate shaping the upper in the United States. We believe that the instant sample is classifiable as unfinished footwear, in item 700.35, TSUS.

Sincerely,

Arthur P. Schaffner

for Harvey B. Fox

Mr. R. D. Rogers
W. Y. Moberly, Inc.
Box 164
Sweetgrass, Montana 59484

Dear Mr. Rogers:

You have requested a ruling on a Customs transaction involving an article known under the trade name of "Super-Proofer." For future reference, please note that rulings under 19 CFR section 177.2 are usually given in the case of prospective transactions and not in the case of specific matters presently under consideration by a Customs Service field office. Transactions pending before an office by reason of arrival, entry, or otherwise are normally resolved by that office. A field office may be requested to forward the question to the Headquarters office for consideration under the procedures in section 177.11. In the present case we will deal with your request as if a ruling on a prospective transaction had been made.

As you describe the Super-Proofer, it is a plastic frame with hollow windows that will hold strips of 35mm film in flush contact with a piece of photographic paper to make a contact proof of the negatives, which are exposed with light from an enlarger.

The Super-Proofer cannot be properly classified under item 722.86, contact printers. The Super-Proofer will not, by itself, print anything but requires at least an external light source to produce proofs of negatives. The McGraw-Hill Encyclopedia of Science and Technology (1977) indicates that contact printers are "boxes containing lamps and a glass top on which a negative is placed...." The Encyclopedia of Practical Photography states that a contact printer is:

> ...a glass-top box with exposing lights and a safelight...inside and a hinged pressure cover over the glass. Switches on the front control the lights.... In the simplest printer, only one light intensity is available.... In more sophisticated printers there may be a great number of small exposing lamps....

Customs Ruling 056574 described a contact printer capable of superimposing; posterizing; producing multiple images; reducing, intensifying, or canceling colors; and producing other special effects; and held it classifiable under item 722.86. The degree of sophistication of that article is not necessary for classification as a contact printer; however, the Super-Proofer does not appear to be the equivalent of even the simplest devices known as contact printers.

A12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The Super-Proofer would seem to be more accurately described as a contact printing frame. It may represent, for certain purposes, a technological improvement over existing glass frames. It does not, however, thereby become a contact printer. The Super-Proofer is properly classified under item 722.94, other photofinishing equipment for still pictures.

Sincerely,

Arthur P. Schaffner

for Harvey B. Fox

26 DEC 1985

Mr. John Casanas
J. M. Rodgers Co., Inc.
90 West Street
New York, New York 10006

Dear Mr. Casanas:

Recently you inquired about the tariff classification of an infants' high top shoe from Hong Kong. You submitted a sample along with your letter.

The sample submitted has a vinyl upper with a fold-down imitation fur collar which occupies over 10 percent of the exterior surface area of the upper. There is an adjustable strap closure on the shoe, which has a closed toe and back. The shoe is a California construction in which a plastic strip (i.e., the insole wrap) has been sewn to the upper and then turned under and cemented to the insole. It is valued at $1.75 per pair.

The issue is whether the sample meets the requirement of item 700.61, Tariff Schedules of the United States (TSUS), that the sole be "affixed to the upper exclusively by an adhesive." (If the shoe does not meet this requirement, then it is classifiable in item 700.64, TSUS). It is the stitching of the insole wrap to the upper which causes a problem in meeting the "affixed...exclusively by an adhesive" requirement of item 700.61, TSUS.

It is our position that item 700.61, TSUS, is not applicable. The insole wrap is an intermediary piece between the sole and the upper, which are not in direct contact with each other. Inasmuch as the wrap indirectly connects the sole and the upper, it could be said that the sole is affixed to the upper by means of the strip. Although technically the sole has been cemented onto the shoe, the stitched part of the wrap helps attach the sole and the upper. We note that if the stitching holding the insole wrap to the upper is removed, the sole is no longer in contact with the upper. This indicates that the shoe is not exclusively of adhesive construction. Inasmuch as the language of item 700.61, TSUS, requires that

A14

the sole be "affixed...exclusively by an adhesive, " this shoe fails to meet the exclusively adhesive requirement of item 700.61, TSUS.

In reference books on footwear construction methods, California construction is listed in a separate category from cement footwear. See How American Shoes Are Made, U.S. Machinery Corporation, Boston (1961), Footwear Construction Methods of Identification, American Footwear Industries Association, Arlington, Virginia, and the Manual of Shoemaking, C. & J. Clark, Ltd., England (1976).

The sample shoe is classified in item 700.64, TSUS, dutiable at the 1985 Column 1 rate of 48 percent ad valorem.

Sincerely,

Arthur P. Schiffelin

Mr. H. S. Hanks
Dennison Manufacturing Company
300 Howard Street
Framingham, Massachusetts 01701-0344

Dear Mr. Hanks:

In your letter of September 6, 1985, you request reconsideration of our letter to you of August 29, 1985 (075938), concerning a paper product called Cham Tenero sheet.

In our letter of August 29, we stated that the product, also referred to as 55 GSM HiFi thermo base, would be classifiable under the tariff provision for simplex decalcomania paper, not printed, in item 254.30, Tariff Schedules of the United States (TSUS). You now state that, as imported, the subject paper is completely unlike and unsuitable as a decalcomania paper and must receive your patented wax-like transfer coating (Therimage) after importation to impart decalcomania qualities to the paper.

On page 2 of our August 29 letter we concluded that as imported, the subject paper was in condition, without further processing, to receive decalcomanias, thus warranting classification in item 254.30, TSUS. This was an incorrect statement, one which no doubt prompted your September 6 letter.

In your letter of January 31, 1985, the subject merchandise is described as a base paper coated with clay on one side specifically designed as a base sheet for Dennison's patented Therimage transfer coating which is applied after importation. This patented process involves a wax-like transfer layer over which an ink image (the decalcomania or decal) is printed. Transfer of the design is accomplished by the application of heat and pressure. It is our position that the Therimage heat transfer process is a decalcomania process. The present record supports the conclusion that by design and function the 55 GSM HiFi thermo base is exclusively used as a carrier for decalcomanias. Classification in item 254.30, TSUS, is therefore appropriate.

B2

Our letter to you dated August 29, 1985 (075938), is modified as indicated, but is otherwise affirmed.

Sincerely,

Arthur P. Schaffler

James Caffentzis, Esq.
Fitch, King and Caffentzis
Attorneys and Counselors at Law
116 John Street
New York, New York 10038

Dear Mr. Caffentzis:

In a letter dated September 10, 1985, you requested that this office revoke the result reached in New York Ruling Letter No. 813143 dated May 2, 1985, concerning the dutiable status of the Snugli quiet book produced in Korea.

In the cited ruling our New York office held that the Snugli quiet book is classifiable under the provision for other toys in item 737.95, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 9.6 percent ad valorem or entitled to duty free treatment under the Generalized System of Preferences, if otherwise qualified.

The Snugli quiet book was described in the cited ruling as follows:

> The article is made of blue corduroy material measuring 8 inches by 10 inches. White fabric leaves are sewn to the corduroy covers, with an activity sewn onto each page. The various play activities are: matching felt colored balloon shapes by means of velcro attachments, lacing and tying a shoelace on a blue furry shoe, moving the hands on an orange felt clock, braiding three strands of black yarns, assembling felt shapes to form a clown's face, working a zipper on a blue felt pocket, matching red felt geometric shapes and manipulating colored beads attached to yellow braided cord. The article is of the class or kind of merchandise used chiefly for the amusement of children.

B4

It is your opinion that the merchandise is properly classifiable under the provision for toy books, including coloring books and books the only reading matter in which consists of letters, numerals, or descriptive words in item 737.52, TSUS, and entitled to duty free entry.

It should be noted that the merchandise involved consists of various play activities a child can physically manipulate such as matching felt shapes, lacing and tying shoelaces, braiding strands of yarn, working a zipper, etc. It is our observation that the predominant feature of the article is the physical activity in which a child manipulates the product rather than glancing at pictures or reading letters, numerals or descriptive words. Although the article is in a book format in so far as there are "pages", it is subordinate to the play value of the activities involved. The presence of a front cover, back cover and pages, are merely a convenient format to incorporate what is otherwise an activity toy.

In view of the foregoing, it is our position that the Snugli quiet book was properly classified under item 737.95, TSUS, as other toys.

Sincerely,

Arthur P. Schaffner

for Harvey B. Fox

Mr. Robert F. Brands
Vice President-Marketing
Shampoo Sponge International
1 Rockefeller Plaza
New York, New York 10020

Dear Mr. Brands:

Your letter dated August 7, 1985, addressed to our New York office that requests the tariff classification of a shampoo-wax sponge from Sweden has been referred to Customs Headquarters for a response.

The sample accompanying your request is a rectangular sponge with the following dimensions: 175 millimeters long, 95 millimeters wide, and 35 millimeters high. It is made from expanded polyether plastic material that has been impregnated with shampoo and wax ingredients. The sponge which is stated to be the component material in chief value is folded and enclosed in a cylindrical plastic sleeve with a printed paper wrapper. From the advertising claims on the wrapper, it appears that the sponge expands when immersed in water, thereby allowing the user to shampoo and wax the car in one operation.

The issue presented by your request concerns whether the article is classifiable in item 770.80, Tariff Schedules of the United States (TSUS), the provision for expanded, foamed, or sponge rubber or plastics, and articles not specially provided for wholly or almost wholly of such rubber or plastics.

General Headnote 9(f)(iii), TSUS, states that the term "almost wholly of" means that the essential character of the article is imparted by the named material, notwithstanding the fact that significant quantities of some other material or materials may be present. Generally, a material imparts the essential character of an article if it is "...indispensable to the structure, core, or condition of the article..." United China & Glass Co. v. United States, 61 Cust. Ct. 386, C.D. 3637 (1948).

In T.D. 67-6(9) dated December 9, 1966, we stated that a polyurethane foam mitt containing a small amount of detergent that is used for washing and polishing automobiles was classified as expanded, foamed, or sponge rubber of plastics, and articles not specially provided for wholly or almost wholly of such rubber or plastics, of polyurethane in item 770.40, TSUS.

B6

Likewise, the essential character of the shampoo wax sponge is imparted by the sponge material. The soap and wax ingredients are additives that improve the sponge but do not alter the essence of the article.

Accordingly, the shampoo-wax sponge is classifiable under the provision for articles not specially provided for wholly or almost wholly of sponge rubber or plastics in item 770.80, TSUS, with duty at the rate of 8.1 percent ad valorem.

Sincerely,

William Schaffner

Mr. Mitchell Chukerman
Schwarz Paper Company
8338 North Austin Avenue
Morton Grove, Illinois 60053

Dear Mr. Chukerman:

In a letter dated July 29, 1985, you inquired as to the dutiable status of a vinyl garment bag produced in Taiwan. A sample was submitted for examination.

The sample garment bag is made of 4 mil thick PVC which has a crinkle pattern simulating artificial leather. It measures 38" long x 23" wide and has a full length nylon coil zipper closure. The seams are reinforced with PVC edging and polypropylene stitching. There is a clear plastic view window in which a business card may be inserted. The front of the bag is imprinted with the name of a retail store. The bag is designed to hold a garment by means of a clothes hanger which protrudes from an opening in the top. The bottom edge of the sample is sewn, but on actual importation it will be open and furthermore, the zipper will be omitted and there will be no opening in the front.

The issue presented is whether the sample garment bag is classifiable under the provision for other luggage of other materials in item 706.62, Tariff Schedules of the United States (TSUS), or is classifiable under the provision for other household articles not specially provided for, of rubber or plastics in item 772.15, TSUS.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides that "For the purposes of the tariff schedules (a) the term 'luggage' covers -- (i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags and like articles designed to contain clothing or other personal effects during travel."

It has been consistently our position to view substantiality of construction as essential to a finding that an article is designed for travel. An examination of the sample bag reveals that it is substantially constructed, noting that the seams are reinforced with PVC edging and polypropylene stitching.

BS

In view of the foregoing, it is our position that garment bags represented by the sample are classifiable under the provision for other luggage of other materials in item 706.62, TSUS, and dutiable at the rate of 20 percent ad valorem.

Sincerely,

Arthur P. Schaffer

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: DEC 18 1985

FILE: CLA-2 CO:R:CV:G
077006 TLL

077006

TO : District Director of Customs
Baltimore, Maryland 21202

FROM : Director, Classification and Value Division

SUBJECT: Classification of Chewing Gum Base; IA 34/85

The question presented here is whether the imported material is sufficiently advanced to be classified as an unfinished chewing gum under item 182.32, Tariff Schedules of the United States (TSUS), or is merely an ingredient of such gum. If it is an ingredient, it would be classified under item 183.05, TSUS, as other edible preparations.

The gum base is a product which is made from elastomers, antioxidants, plasticizers, fillers and softeners. The processing of each batch of gum base requires highly sophisticated machinery and skilled technicans. Each batch is manufactured to be a specific type of gum, such as bubble gum or nonstick gum. Once manufactured, the character of the imported gum cannot be changed by further processing. After importation, the gum base is melted and mixed with flavors and sweetners and formed into individual pieces of gum. The weighing and melting of the gum base takes more than 70 percent of the domestic processing time.

Insofar as Customs law is concerned, it is axiomatic that a thing may be classified for tariff purposes under an eo nomine provision for the article if that thing has been so far processed toward its ultimate completed form as to be dedicated to the making of that article or that class of articles, or has been so far advanced beyond the stage of materials as to be dedicated to and commercially fit only for use as the particular article. American Import Co. v. United States, 26 CCPA 72, 74, T.D. 49612 (1938) and cases cited; Finn Bros. Inc. v. United States, 59 CCPA 72, C.A.D. 1042, 454 F. 2d 1404 (1972) and cases cited.

B10

Inasmuch as the imported product is for all intents and purposes chewing gum, the proper classification for this product is as chewing gum under item 182.32, TSUS.

Please advise the importer of our decision on this matter.

Arthur P. Schaffner
for Harvey B. Fox

DEC 13 1985

REFER TO
CLA-2 CO:R:CV:G
077007 c

District Director of Customs
600 Central Avenue
Great Falls, Montana 59401

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3304-5-000015

This protest was filed against your decision in the liquidation on December 21, 1984, of entry No. 84-332968-9 dated May 14, 1984, covering a shipment of food bins, gravity dispensers and bag dispensers produced in Canada

FACTS:

The food bins are plastic containers commonly used to hold food products in a "health food" type store. These bins hold bulk food products offered for sale. The shopper is able to open the container and remove the desired quantity to be purchased.

The gravity dispensers are also plastic containers for holding food products in "health food" type stores. These containers allow the food products to be dispensed when a shopper pulls a lever at the bottom of the container.

The bag dispenser is a plastic container that holds plastic bags and allows the shopper to pull off a bag which will be used to hold purchased bulk food products.

This merchandise was classified in liquidation under the provision for other articles not specially provided for, of rubber or plastics in item 774.55, Tariff Schedules of the United States (TSUS).

B12

The protestant claims that the merchandise is classifiable under the provision for containers, of rubber or plastics, with or without their closures, chiefly used for the packing, transporting, or marketing of merchandise in item 772.20, TSUS.

ISSUE:

Are the food bins, gravity dispensers and bag dispensers chiefly used for the packing, transporting, or marketing of merchandise?

LAW AND ANALYSIS:

T.D. 56199(14), T.D. 56478(77) and T.D. 56484(77), have been cited by protestant in support of its position that the merchandise is classifiable under item 772.20, TSUS. These rulings are not relevant to the issue inasmuch as they were concerned with the tariff classification of various dispensers, none of which was classified as a container.

The protestant has also cited the case of Poland Brothers, Inc. v. United States, 64 Cust. Ct. 248, C.D. 3986 (1970), in support of its claim. This case involving the classification of vinyl garment bags which were sold to retail stores which provided them free of charge to purchasers of men's suits is also not relevant to the issue because the garment bags were held not to be the containers provided for in item 772.20, TSUS.

In the case of Imperial Packaging Corp. v. United States, 2 CIT 250, (1981), the court interpreted the term "merchandise" as used in item 772.20, TSUS, as referring "to products which are still in the stream of commerce," rather than articles which are personal effects or commodities in the hands of the ulimate consumer.

The subject containers are used by the store for loose bulk goods. They remain in the store and are not purchased with their contents. These containers are not involved in the marketing process because the

B13

L00LL0

merchandise is in loose bulk condition (unpacked) and bagged only after leaving the "stream of commerce." The bins and dispensers allow the purchaser to serve himself. Furthermore, the bag dispenser is not a container because the bags are not "merchandise" but packaging material given away free by the store after the bulk merchandise is purchased. It enables the purchaser of the merchandise to obtain his own take home carrier for merchandise already purchased.

HOLDING:

The subject containers are not the containers provided for in item 772.20, TSUS, because they are for storage and are not chiefly used for packing, transporting or marketing of merchandise.

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Scheffler

for Harvey B. Fox
Director, Classification
and Value Division

812445

077052

Mr. Matthew Walsh
Cambridge Design Corporation
1031 Northern Boulevard
Roslyn, New York 11576

Dear Mr. Walsh:

This is in reference to your letter of February 7, 1985, regarding the tariff classification of two pouches from Korea.

The smaller pouch is constructed of rayon and has a flocked exterior surface. It has a nylon zipper closure, is unlined, and does not have a gusset. It measures approximately 7 inches by 3-3/4 inches.

The larger pouch has an exterior surface of nylon and is equipped with a waterproof lining, foam padding, nylon zipper, and a 15-inch swagger handle. The pouch measures approximately 9-1/2 inches by 7 inches.

You advised the National Import Specialist that both pouches will be imported empty. The pouches are sold to a firm which uses them as containers for previously packaged manicure sets.

The issue involved is whether these pouches are classified as luggage in item 706.41, Tariff Schedules of the United States (TSUS), and subjected to textile quota restraints or as flat goods in item 706.39, TSUS.

Schedule 7, Part 1, Subpart D, Headnote 2, TSUS, provides:

2. For the Purposes of the tariff schedules --

(a) the term "luggage" covers --

(i) travel goods, * * * and like articles designed to contain clothing or other personal effects during travel, and

(c) the term "flat goods" covers small flatwares designed to be carried on the person * * *.

The term "designed to be carried on the person" has been interpreted to include articles carried in the pocket, in the handbag, or on the person.

The smaller pouch, designed to be carried on a person, meets the definition of the term "flat goods." Therefore, the pouch is classifiable under the provision for flat goods, of textile material, in item 706.39, TSUS, and dutiable at the rate of 20 percent ad valorem.

The larger pouch with its waterproof lining would seem to be designed to carry more than just a manicure set. In fact, a manicure set contained in the the smaller pouch would fit into the larger bag with room for additional items. We have held that articles with waterproof linings similar to the larger pouch, such as toilet, cosmetics, shaving and utility bags designed to contain men's and ladies toiletries while traveling, were classified as luggage. Further the larger pouch does not meet the definition of the term "flat goods." Therefore, the larger pouch is classified as luggage.

The larger pouch whether imported with or without the swagger handle, is classifiable under the provision for luggage, of textile materials, in item 706.4152, TSUS, and dutiable at the rate of 20 percent ad valorem.

Textile quota category 670 is applicable to both articles. However, luggage produced in South Korea and classified in item 706.4152, is currently subject to textile quota restraints.

Sincerely,

Harvey B. Fox
Director, Classification
and Value

District Director of Customs
55 E. Monroe Street
Chicago, Illinois 60603

Re: Application for Further Review of Protest No. 3901-5-000619

Dear Sir:

This application for further review was filed against your decision in the classification of battery separator paper as an article of paper under item 256.90, Tariff Schedules of the United States (TSUS). The product imported is a strip of paper under 4 inches wide, taken from a roll, and is approximately 0.006 inch thick. A sample of the product was submitted with the protest. Protestant suggests that classification of this product under item 251.51, TSUS, as paperboard, not specially provided for, would be appropriate.

The applicable headnotes, Subpart B, Part 4, Schedule 2, TSUS, provide:

> Subpart B headnotes:
>
> 1. This subpart covers paper and paperboard, in rolls and sheets, not cut to size or shape, and not made up into articles finished or not finished * * * *.
>
> 2. For the purposes of this subpart, paperboard described in items * * * and 251.51 under 0.012 inch in thickness shall be deemed to be paper.

The imported battery separator paper is excluded from classification in item 251.51, TSUS, because the product is less than 0.012 inch in thickness and, by the terms of the headnote, is not paperboard.

Even if it were paperboard, and of sufficient thickness, it would be excluded from Subpart B (which contains item 251.51) by the terms of Headnote 1 of the subpart, in that it is imported cut to size or shape. As stated in Headnote 2(b) of Part 4, TSUS, the term "cut to size or shape" means paper or paperboard in rolls or strips not exceeding 6 inches in width.

077057

C3

In reviewing this application for further review, we also note that it now appears that the term "slitted" as it occurs on the CF 6431, forwarded by Chicago to New York and the term "slit width" as it appears on the specification sheets provided by the importer are not equivalent to the term "slits" that appears in Headnote 2(b) of Part 4, TSUS. Rather, "slit width," probably refers simply to the width of the paper itself.

Consequently, it is our opinion that the liquidated classification is not correct and the correct classification is under the provision for other paper, cut to size or shape, in item 256.30, TSUS.

You are directed to deny this protest except to the extent reclassification of the merchandise under item 256.30, TSUS, results in a partial allowance. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur R. Shaffner

Re: Application for further Review of Los Angeles Protest
2704-4-004277

Dear Madam:

This application for further review was filed against your decision in the classification of a "Happy Thanksgiving" card under item 274.05, Tariff Schedules of the United States (TSUS). Protestant suggests that the item in question is a care card and classifiable under item 274.80, TSUS, as printed matter not specially provided for, other, printed on paper in whole or in part by a lithographic process, over 0.020 inch thick.

The cards involved are lithographically printed cards which are attached to a plastic pick inserted in a floral container. The front of the card consists of pictorial matter (grapes on a vine) and the greeting, "Happy Thanksgiving." Half of the inside of the card advises the recipient, "You've just received a thoughtful floral gift." It also contains advertising material for these products. The second half of the inside of the card consists of a blank space for amplifying the sentiment on the front of the card and identifying the giver of the gift. The back of the card sets forth plant instructions, a guarantee, the name of the company, a trademark and trademark notice, a copyright notice, and information that the imported product is printed in Japan.

The superior heading to items 274.00 and 274.05, TSUS, provides for the classification of "Greeting cards, valentines, tally cards, place cards, and all other social and gift cards, including folders, booklets, and cutouts, or in any other form, finished or not finished, and with or without envelopes." Item 274.00 TSUS, then provides for those items "Without greeting, title, or other wording." Item 274.05, TSUS, then provides for the classification of those items " With greeting, title, or other wording."

An eo nomine designation, without limitation or a shown contrary legislative intent, judicial decision, or administrative

CS

practice, and without proof of commercial designation, will include all forms of the article. Nootka Packing Co. v. United States, 22 CCPA 464, T.D. 47464 (1935); Crosse & Blackwell Co. v. United States, 36 CCPA 33, C.A.D. 393 (1948) and cases cited; T.M. Duche & Sons, Inc. et al. v. United States, 44 CCPA 60, C.A.D. 638 (1957).

Without deciding whether or not the imported product is a greeting card, it appears clear to us that this particular card is a gift card. It is a card which accompanies a gift.

Consequently, classification under item 274.05 is correct.

You are directed to deny this protest. A copy of the decision should be attached to the Form 19, Notice of Action, to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Chief, Customs Information Exchange
United States Customs Service
New York Seaport
6 World Trade Center
Room 450
New York, New York 10048

Dear Madam:

A Customs Form 6431, July 18, 1984, from the port of Portland, Maine, concerning entry No. 84-204847, dated July 10, 1984, relates to a difference in the classification of potatoes from Canada. This case is not listed in the most recent list of differences in CIE N-42/75, Suppl. 43, August 1985. The file was transmitted to Headquarters on September 25, 1985.

FACTS:

The imported merchandise are peeled tablestock (Kennebecs) potatoes in bulk. After importation, these potatoes will be cut into french fries. We are advised that there is a normal market for peeled potatoes.

The import specialist in Portland, Maine is of the opinion that peeling potatoes reduces them in size; the concerned NIS does not consider them reduced in size. New York Ruling 811957, dated February 15, 1985, classified peeled potatoes under item 137.25, Tariff Schedules of the United States (TSUS), if within the quota allotment, and under 137.28, TSUS, if outside the quota provision.

ISSUE:

Whether the peeled potatoes are reduced in size within the meaning of the superior headings contained in Subpart A, Part 8, Schedule 1, TSUS.

DISCUSSION OF LAW:

Subpart A, Part 8, Schedule 1, TSUS, provides for the classification of "vegetables, fresh, chilled, or frozen (but not reduced in size nor otherwise prepared or preserved)."

c1

The question of what constitutes a reduction in size for purposes of this subpart has been litigated on several occasions. See North Pacific Canners and Packers, Inc. v. United States, 74 Cust. Ct. 87, C.D. 4590 (1975). In that case, the court held that "reduction in size" meant "a reduction in size beyond the point that such vegetables are reduced in size as an incident to placing them in a marketable condition." Under this authority, Headquarters ruled in Headquarters Ruling Letter (HRL) 069795, dated March 12, 1982, that frozen whole tomatoes (including the meat, pulp, seeds, and core) which had been peeled subsequent to their initial freezing were not "reduced in size" for tariff classification purposes, since the instant merchandise was the sole determinant as to what constituted the "marketable condition" of frozen whole tomatoes.

Under authority of HRL 069795, New York Ruling Letter 811957, dated February 15, 1985, was issued holding that peeled whole potatoes are subject to classification under the provision for potatoes, white or Irish: fresh, chilled or frozen (but not reduced in size nor otherwise prepared or preserved) item 137.25, TSUS, if within the quota provision, and item 137.28, TSUS, if outside the quota provision.

CONCLUSION:

New York ruling letter 811957 is correct. Peeling potatoes does not reduce them in size but merely puts them in marketable condition. The potatoes in question are subject to classification under item 137.25, TSUS, or item 137.28, TSUS, as appropriate.

SUBJECT: Request for Internal Advice No. 66/85 Concerning the Tariff Classification of Wool Fabrics Claimed to be for Upholstery. (Your Memorandum of July 5, 1985, MAN-1-L:C:D:X-II EDW/mf)

The subject internal advice request was initiated by counsel for the importer in a letter dated January 28, 1985. The merchandise is made in Scotland. Our decision follows:

ISSUE:

It is your position the fabrics in question are classifiable under the provision for woven wool fabrics valued over $9 per pound in item 336.64, Tariff Schedules of the United States (TSUS). The 1985 column 1 rate of duty required under that provision is 12 cents per pound plus 34.7 percent ad valorem. It is claimed in the IA request that the merchandise is classifiable as woven wool upholstery fabrics valued over $2 per pound in item 357.15, TSUS. The 1985 column 1 rate of duty required under that provision is 12 cents per pound plus 7 percent ad valorem.

To resolve this tariff classification competition, it must be determined whether the fabrics at issue are of a multipurpose type or of a class or kind chiefly used for upholstery.

C9

FACTS:

This IA request concerns woven fabrics in 12 qualities for which samples have been provided. Ten of the samples are 100 percent wool while one is a combination of wool and linen and another a combination of wool and silk. It is indicated that the fabrics all come in 60-inch wide bolts, and it has been stated that none of the fabrics have been treated with any chemicals or coatings. The fabrics generally are in assorted muted tones consisting mainly of pinstripes, plaids and checks.

A private test report showing heavy-duty abrasion resistance using a cotton duck abradant in accordance with the so-called Wyzenbeek test has been submitted, but the number identifying the tested sample does not correlate with any of the identification numbers of any of the submitted samples. Another test report shows that four of the 100 percent wool samples meet California fire resistance standards. A statement has been submitted by a customer of the importer supporting the claim made that the fabrics in question are exclusively used for upholstery. Customs laboratory examination of four qualities of the fabrics showed weights per square yard of 5.07, 6.69, 11.57 and 9.66 ounces. The samples more specifically bear the names: Heavy pinstripe, Iverness Checks, Heatherweave, Lindsay, Carnegie Check, True Gienurquhart Check, Coastal Checks, Marsh District Check, Pinstripe, Linen Blend, Castle Blend and Lord Elcho.

079065

C10

LAW AND ANALYSIS:

We have previously pointed out that classification under the TSUS provisions for upholstery fabrics are determined by chief use. In this connection, counsel, among other authority, has referred to United States v. The Carborundum Company, 63 CCPA 98, C.A.D. 1172 (1976), for its pertinence to chief use determinations. Chief use, of course, is only meaningful when the class or kind of merchandise to which the chief use relates has been identified. In other words, defining class or kind and establishing chief use are correlative but separate considerations. Therefore, assertions in this matter that the instant fabrics are sold exclusively to upholsterers, while pertinent to use, do not establish class or kind. Class or kind pertains to the specific physical characteristics of the fabrics which make them objectively distinguishable as a class or kind from other fabrics.

Consequently, counsel has called our attention to a number of factors which it is contended we should regard as pertinent in describing various physical characteristics distinguishing upholstery fabrics from other fabrics. Even the price factor counsel has referred to, while not relating directly to physical characteristics, may be pertinent insofar as it may presuppose general quality characteristics associated with the upholstery goods market. But no one of the characteristics by itself can be found not to be common

577065

C11

to a given quality of apparel fabric. Therefore, in identifying a class or kind of woven wool fabrics which are upholstery fabrics, we must look to the various physical factors as they may exist in combination with other pertinent factors.

With respect to price insofar as it may be pertinent, upholstery fabrics tend to be identified with more expensive textile products. However, no information has been provided in the IA request showing the cost of the samples or any basis for comparing their costs to those of apparel fabrics of similar composition, weight or other common features which may be pertinent for cost comparison purposes. Next, counsel relies on the weights of the fabrics for a distinction claiming, in effect, that the samples are either too heavy or too light for apparel purposes. We disagree with the view that lightness in weight is a legitimate factor to be considered either by itself or in combination with other factors in defining class or kind for woven wool upholstery fabrics. Heaviness, by contrast, even though a characteristic common to fabrics for such items as coats, would be a pertinent characteristic in combination with other characteristics useful in defining class or kind. However, it is our opinion that of all the fabrics, only Heatherweave at 9.66 ounces per square yard and Carnegie Check at 11.57 ounces per square yard are in a weight range characteristic

590765

C12

of wool upholstery fabrics. But those weights would only be persuasive of classification as upholstery fabrics if combined with other physical characteristics also associated with upholstery qualities.

Another characteristic which counsel has identified and which may be regarded as pertinent to class or kind is bolt width. However, contrary to the information counsel has provided, 60-inch bolts are more typical of apparel fabrics, while 54-inch bolts are more the norm for upholstery fabrics. With respect to strength and abrasion resistance, certainly pertinent factors in identifying class or kind, the submitted test data is for a quality not represented by any of the samples.

Counsel has further referred to a distinction based on patterns woven into the fabric rather than printed on after weaving citing our decision of October 30, 1980, IA 118/80, file No. 066533. However, as indicated above, upholstery fabrics as a class or kind cannot be identified by any single characteristic. The method of design formation would only be persuasive in combination with other factors persuasive of a class or kind used for upholstery. Further, with respect to design, counsel has suggested that on the basis of taste and other considerations the fabrics at issue are not suitable for apparel. However, there is nothing in the conventional pinstripe, check, etc., configurations of the samples which

097065

C13

would suggest to the layman that the samples are upholstery fabrics and not apparel fabrics. In fact, the fabrics are completely lacking in coloristic effects or designs which ordinarily would be associated with interior decoration motifs and not with apparel fashions.

Finally, counsel has cited fire resistance as a pertinent consideration. However, it is not shown that the tested samples have any more fire resistance than is inherent in any wool fabric. In fact, the fabrics have not only not been treated for fire resistance, they have not been treated for hard surface or non-pilling qualities which are characteristic of upholstery fabrics.

HOLDING:

While it is claimed, in effect, that the fabrics are actually used for upholstery, the applicable tariff classification standard is chief use of the class or kind that the fabrics represent, and the instant fabrics are not shown to have physical characteristics by which they may be identified as a class or kind distinguishable from fabrics not used for upholstery. Therefore, the fabrics which are valued over $9 per pound are properly classifiable under item 336.64, TSUS. A copy of this decision should be furnished to the IA applicant.

077067

Mr. Marc S. Bluestein
Vice President-Finance
Mercury International Trading Corp.
75 Forbes Boulevard
P.O. Box 430
Mansfield, Massachusetts 02048

Dear Mr. Bluestein:

In a letter dated March 25, 1985, we ruled that an artificial suede boot for men is classifiable depending on its value in item 700.61, Tariff Schedules of the United States (TSUS) (if valued not over $6.50 per pair), dutiable at the rate of 37.5 percent ad valorem, 700.62, TSUS (if valued over $6.50 but not over $12.00 per pair), dutiable at the rate of 90 cents per pair plus 20 percent ad valorem, or item 700.63, TSUS (if valued over $12.00 per pair), dutiable at the rate of 20 percent ad valorem.

We have reconsidered the classification of the subject footwear and have concluded that classification under items 700.61 through 700.63, TSUS, is not appropriate. Specifically, footwear soles which overlap the upper other than at toe or heel are precluded from classification thereunder. It is our observation that the six inch long toe bumper, which appears to be part of the molded outsole, overlaps more than the toe.

Information before us is that the trade meaning of "toe" includes items which go much farther back in the shoe, as in a "steel toe" in safety work footwear, and items which end before the toes even begin, as in the "toe" inserted in the quick release mechanism of a ski binding. We have found only one use of the phrase "at the toe" in our trade reference. That is on page 247 of the "Manual of Shoemaking." The photo on page 249 makes it clear that, in that context, "at the toe" means only a vertical line about 1/100 inch wide at the front tip of the shoe. It is improbable that such an extremely restrictive definition would have been intended by Congress, but such a use by the trade indicates that it is unlikely the trade would also apply the phrase "at the toe" to a six inch long "toe bumper" present on the instant boot and also indicates that the phrase "at the toe" has no <u>one</u> trade meaning. A review of dictionaries also indicates that there is not one clear common meaning for "at the toe."

The Summary of Trade and Tariff Information, Rubber Footwear, USITC Publication 841, March 1981, at page 6, states in pertinent part that "items 700.61-700.63 provide for footwear that is held to the foot with the use of laces, buckles, or other fasteners and that is of cement construction, and is primarily intended to cover "joggers."

D1

In view of the expressed legislative intent that items 700.61-700.63, TSUS, cover primarily joggers, it is our opinion that "at the toe" means the small area of the toe covered by the flat sole of a cemented jogger where it overlaps the upper.

In view of the foregoing, it is our opinion that the hiking boot is properly classifiable under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics: other: footwear with soles which overlap the upper other than at the toe or heel: other: valued over $3.00 but not over $6.50 per pair in item 700.67, TSUS, and dutiable at the rate of 90 cents per pair plus 37.5 percent ad valorem or at the rate of 90 cents per pair plus 20 percent ad valorem under item 700.69, TSUS, if valued over $6.50 but not over $12.00 per pair.

This ruling is applicable to the subject footwear entered or withdrawn from warehouse, for consumption, on or after the date of this letter.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Benjamin C. Lu
Director
Coordination Council for North American Affairs
4301 Connecticut Avenue, NW, Suite 420
Washington, D.C. 20008

Dear Mr. Lu:

This is in reference to your letter of November 29, 1984, regarding the tariff classification of a cosmetic bag from Taiwan.

The sample submitted i a circular cosmetic bag measuring approximately 5-1/4 inches diameter and 3-1/2 inches in height. The bag has an exterior surface of nylon and an interior coating of plastic. A nylon tape zipper encircles the circumference of the bag allowing the top portion to open up. A self-material top handle is used to carry the article.

The issue involved is whether the bag is classified as luggage in item 706.41, Tariff Schedules of the United States (TSUS), and subject to textile quota restraints or as a flat good in item 706.39, TSUS.

Schedule 7, Part 1, Subpart D, Headnote 2, TSUS, provides:

2. For the purpose of the tariff schedules --

(a) the term "luggage" covers --
(1) travel goods, * * * and like articles designed to contain clothing or other personal effects during travel, and

(c) the term "flat goods" covers small flatwares designed to be carried on the person * * *.

D3

The term "designed to be carried on the person" has been interpreted to include articles carried in the pocket, in the handbag or on the person.

The sample submitted has a plastic lining and a carrying strap which would indicate that it was designed to be carried by a person rather than on a person. Therefore, the subject bag does not meet the definition of the term "flat goods".

The bag is classifiable under the provision for luggage, of other textile materials, in item 706.4152, TSUS, and dutiable at the rate of 20 percent ad valorem.

Bags of this type of material fall within textile category designation 670. As a product of Taiwan, this merchandise is subject to a visa requirement and quota restraints.

Sincerely,

John T. Rath

Harvey B. Fox
Director, Classification
and Value Division

814970

077105

Mr. Mark S. Rodack
M & R Imports Inc.
6920 Central Highway
Airport Circle Industrial Park
Pennsauken, New Jersey 08109

Dear Mr. Rodack:

We are responding to your letter of August 7, 1985, that was referred by the New York Seaport, concerning the tariff classification of a decorative pillow. A sample was provided following a telephone conversation on November 5, 1985.

The sample pillow, manufactured from a fabric that is a blend of cotton and polyester, measures 7 by 3 3/4 inches and is surrounded by a ruffle with eyelet embroidery that is approximately 1 3/4 inches wide. The pillow is stuffed with polyurethane foam. A textile overlay in the shape of a rectangle with a scalloped edging is attached to the front of the pillow and bears the following message: "A daughter is a special person." A textile loop stitched to the back of the pillow is used to hang the item.

The issue presented by your request is whether the sample merchandise is classifiable as a pillow for tariff purposes in item 727.86, Tariff Schedules of the United States.

A pillow is defined in the American Heritage Dictionary, 1976 ed. as "1. A cloth case, stuffed with something soft, such as down, feathers, or foam rubber, and used to cushion the head during sleep. 2. A decorative cushion." A cushion is defined in the same text as "1. A pad or pillow with a soft filling, used for resting or reclining. 2. Anything resilient used as a rest, support, or shock absorber." As the foregoing definitions make clear, the subject article is not considered to be a pillow because it is too small to be used for resting or supporting the body.

In tune with these definitions, Customs has ruled on numerous occasions that miniature pillows that are too small to support the head or other part of the body are classifiable as articles not specially provided for, of textile materials. See Headquarters Ruling Letter (HRL) 046377 dated October 21, 1977, and New York Ruling 803199 dated June 25, 1982.

DS

The presence of the textile loop for hanging the article indicates that the article is designed to be hung on a wall. Thus, the article is appropriately described as a wallhanging. We have previously classified wallhangings under the provision for textile furnishings. See Headquarters Ruling Letters 045156 dated August 3, 1976, and 030030 dated January 23, 1974.

In accordance with these rulings and assuming the sample merchandise is in chief value of man-made fibers, it is classifiable under the provision for other furnishings ornamented, of man-made fibers, wallhangings, in item 365.8940, Tariff Schedules of the United States Annotated. The textile category is 666. Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its status.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Angela DeGaetano
Chief, CIE
U.S. Customs Service
6 World Trade Center
New York, New York 10048

Dear Ms. DeGaetano:

A Customs Form 6431 dated November 28, 1984, received in this office on October 16, 1985, from the port of Blaine, Washington, concerns entry No. 972888 dated September 12, 1984, covering a shipment of puffy stickers manufactured in Canada. This difference of opinion is not listed in the list of differences circulated as CIE N-42/75, Suppl No. 43 of August, 1985.

The sending port maintains that the puffy stickers are properly classifiable under the provision for other toys, not specially provided for in item 737.95, Tariff Schedules of the United States (TSUS). The National Import Specialist would classify this merchandise under the provision for other articles not specially provided for, of rubber or plastics in item 774.55, TSUS.

The sending port asserts that the stickers meet the definition of toys set out in Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, because they are chiefly used for the amusement of children. Also it is pointed out that the back of each sample states "Collectible, Reusable, Fun, Tradable stickers."

As support for its position the sending port cites the case of The United States v. Topps Chewing Gum, Inc., 58 CCPA 157, C.A.D. 1022 (1971), which enunciated the principle that "if the purpose of an object is to give the same kind of enjoyment as playthings give, its purpose is amusement." It is claimed that the stickers in issue do in fact provide the same kind of enjoyment that playthings give.

It appears that the decorative buttons which were the subject of the Topps case, supra, were inherently amusing because of the humorous sayings and/or the design features

D1

printed thereon, i.e., a "one-eye monster". An examination of the descriptive material provided indicates to us that many of the puffy stickers are not amusing in themselves. For example, two hearts joined together, a large heart pierced by an arrow, a rainbow, etc. It is our view that the puffy stickers involved do not provide the same kind of frivolous enjoyment for children that they would derive from objects commonly thought of as toys. Although a close case, on balance, the articles seem to be more in the nature of decorations and are not toys.

In view of the foregoing, it is our position that the puffy stickers are properly classifiable under the provision for articles not specially provided for, of rubber or plastics in item 774.55, TSUS.

Sincerely,

Arthur P. Griffin

Mr. R. L. Thompson
Re-Nell Manufacturing Co.
P.O. Drawer 137
Dallas, Georgia 30132

Dear Mr. Thompson:

In a letter dated July 3, 1985, you inquired as to the dutiable status of certain PVC garment bags manufactured in Taiwan. Samples were submitted for examination.

The three samples submitted are not identified by style number. Each of the garment bags is manufactured of PVC which is 3 mil. thick. Two of the bags are nontransparent while the third is transparent. Each bag has a full length nylon coil zipper front and PVC edging reinforcing the seams. The garment bags are carried by the person by means of a clothes hanger which will protrude through a slot at the top. We understand that such merchandise is given as a premium with the purchase of a garment as well as sold at retail in its own individual packaging.

The issue presented is whether the sample garment bags are classifiable under the provision for other luggage of other materials in item 706.62, Tariff Schedules of the United States (TSUS), or are classifiable under the provision for other household articles not specially provided for, of rubber or plastics in item 772.15, TSUS.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides that "For the purposes of the tariff schedules (a) the term '<u>luggage</u>' covers -- (i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel."

It has been consistently our position to view substantiality of construction as essential to a finding that an article is designed for travel. We also look to how the bags are advertised, bought and sold. Specifically, the bags in issue are made of such thin material that minimum pressure would cause the seams to split and a slightly sharp object would pierce the vinyl and damage the contents. Although garment bags represented by the samples are used for travel purposes, it is our view that they are designed primarily for storage in the home.

D9

In view of the foregoing it is our opinion that garment bags represented by the samples are chiefly used in the home and are therefore classifiable under the provision for other household articles not specially provided for, of rubber or plastics in item 772.15, TSUS, and entitled to duty-free treatment under the Generalized System of Preferences, if otherwise qualified.

You state a suspicion that certain of your competitors have been importing garment bags similar to the samples which you have submitted under item 772.20, TSUS, as containers, of rubber or plastics, with or without their closures, chiefly used for the packing, transporting, or marketing of merchandise. Information before this office is that your competitors are not importing their garment bags under item 772.20, TSUS.

Sincerely,

Arthur P. Schaffner

SUBJECT: Your Memorandum dated October 9, 1985 (Your File CLA-2-07-S:COM:N3G-341-1094-814524) Concerning the Tariff Classification of Polyvinyl Chloride Garment Bags

You ask that Headquarters Ruling Letters (HRL) Nos. 075391 and 075785 dated February 28 and March 19, 1985, respectively, be revoked inasmuch as they conflict with HRL No. 075233 dated December 17, 1984. You state that the merchandise ruled on was the same in all the cited rulings.

HRL No. 075233 held that certain PCV suit bags are classifiable under the provision for other luggage of other materials in item 706.62, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 20 percent ad valorem. This result was based on literature submitted by the inquirer describing the bags as being designed for travel. Also, these bags were advertised as travel bags and appeared to us at the time to be substantially constructed for that purpose.

The vinyl garment bags or suit covers and the bridal gown cover which were the subject of HRL Nos. 075391 and 075785 were held to be classifiable under the provision for other household articles not specially provided for, of rubber or plastics in item 772.15, TSUS. The rationale for these holdings was that it has been consistently our position to view substantiality of construction as essential to a finding that an article is designed for travel. We also look to how the bags or covers are advertised bought and sold. It was our observation that the samples were of insubstantial construction because they were composed of such thin material that minimum pressure would cause the seams to split and a slightly sharp object would pierce the vinyl and damage the contents. Further, even though the bags may on occasion be used for travel purposes, it appeared that their primary use is for in-shop or home storage.

D11

075116

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides that "For the purposes of the tariff schedules -- (a) the term 'luggage' covers -- (i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel."

The basic fact to be ascertained following the cited headnote is to determine whether the garment bags or covers and bridal gown covers are "designed to contain clothing or other personal effects during travel." It is our opinion that bags and covers which were the subject of HRL Nos. 075391 and 075785 were not designed for travel purposes even though they may have been advertised as being susceptible to such use. Such advertising is not conclusive as to their design purpose.

It is our view that substantiality of construction is the key to a determination that an article is designed for travel purposes. We believe that substantiality of construction was the distinguishing feature between the vinyl bag, style No. G-340, and the textile bag, style No. 4040, which compelled the conclusion that the latter bag was designed for travel purposes in HRL 075391.

We have not misapplied the concept of chief use in classifying the subject merchandise. Once a determination had been made that certain of the bags or covers involved were not designed for travel, it was necessary to determine whether they were chiefly used in the household or elsewhere to arrive at a proper classification.

In view of the foregoing, we must conclude that our observations regarding the vinyl bags which were the subject of HRL No. 075233 dated December 17, 1984, were erroneous. It is now our opinion that the travel and suit bags involved therein are chiefly used in the household and are classifiable under the provision or other household articles not specially provided for, of rubber or plastics in item 772.15, TSUS. Therefore, HRL No. 075233 will be amended to reflect the conclusion reached herein.

Your exhibits are being returned under separate cover.

Mr. Diego A. De Obaldia
Vice President
Fanasa
Apartado 2130
Panama 1, R. P.

Dear Mr. De Obaldia:

We are responding to your request for a ruling on the country of origin of certain polypropylene bags. Your letter of October 3, 1985, replying to our letter of August 26, 1985, contained additional information on the processing operations performed in Taiwan and Panama. At a meeting at Customs Headquarters on October 17, 1985, the matter was discussed in greater detail.

You state that tubular rolls of cloth are manufactured wholly in Taiwan. The manufacturing process consists of extruding resin into flat tapes that are stretched and annealed in specialized equipment and wound into yarn bobbins that are placed in creels that feed circular looms. The looms produce the tubular cloth which is wound into rolls of about 2,000 meters.

The unmarked tubular cloth is shipped to Panama where it is placed on a cutting/printing and folding machine that costs about $250,000 and is set up for the specific bag to be manufactured. The unfinished bags are then sent to the sewing department where workers stitch the bags on 16 sewing machines costing $2000 apiece. Afterwards the bags go to the revision department where 16 workers check and count the bags in stacks. Finally, the bags are wrapped in bales. You have indicated that the cost to process the cloth is $0.08 per bag and the cost of the cloth itself is $0.132. The value added by the processing in Panama is stated to be 60 percent of the cost of the tubular cloth.

You claim that the tubular cloth has undergone a substantial transformation in Panama into a new and different article. This is so, you argue because the tubular cloth

D13

and the finished bag are classifiable in discrete tariff provisions.

Next, you claim that the tubular cloth is not readily identifiable as being intended for a particular commercial use. That is, you state that the cloth can be used for a variety of purposes: package wrapping; shading in agriculture; and earth filling conditioning.

In determining the country of origin of textiles and textile products that consist of materials produced or derived from, or processed in, more than one country, the imported article is considered to be a product of that country where it last underwent a substantial transformation.

The court in Uniroyal, Inc. v. United States, 3 C.I.T. 220, 542 F. Supp 1026 (1982), aff'd. per curiam, 702 F. 2d 1022 (1982), stated that a substantial transformation will result in an article having a name, character or use differing from that of the imported article. Conversely, the same court recognized that minor processing will not result in a change in the name, character, or use of the article. Uniroyal, at p. 224. And, the courts long have noted that whether an article has undergone a substantial transformation is a determination that depends on the circumstances in each case. Grafton Spools, Ltd. v. United States, 45 Cust Ct. 16, C.D. 2190 (1960).

Turning to the merchandise at hand, we believe the essence of the completed bag is the polypropylene tubing woven in Taiwan. It is there that the most complex manufacturing processes are performed.

The cutting to size, printing, and sewing performed in Panama are minor processing operations. We continue to believe that any other uses for the tubing are extremely limited. These bags are made from tubular woven fabric that is in the finished width of the bag. Thus the fabric is readily identifiable as being intended for a particular use. Accordingly, under section 12.130,(e)(2)(ii), Customs Regulations, cutting to length and overlocking does not result in a substantial transformation of the tubing. Then too, printing information on one side of the bag will not result in a substantial transformation under section 12.130(e)(1)(i), Customs Regulations. To effect such a substantial transformation under the regulations, usually the fabric must be dyed and printed and accompanied by at least two finishing operations.

D14

071131

Even though the tubing and the completed bags are classifiable in separate tariff provisions, that is not considered to be decisive in ascertaining the country of origin of an article. This is consistent with the decision in Rolland Freres, Inc. v. United States, 23 CCPA 81 (1935) where the court made the following observation:

> While the fact that by a manufacturing effort expended on an article its tariff status may have changed is a proper matter to consider along with other circumstances in arriving at a conclusion as to whether the article has been "manufactured or produced", it certainly should not be a controlling consideration.

Likewise, the Customs Service has echoed this interpretation of the effect of a change in tariff classification in our administrative rulings. For example, in C.S.D. 80-10 (1980), we modified a prior ruling 049912 dated April 1, 1977, to reflect the position that the country where merchandise first becomes susceptible to its final tariff classification is a factor for consideration and not determinative in ascertaining the country of origin of that merchandise.

In sum, a substantial transformation of the tubing does not occur in Panama. Therefore, the country of origin of the polypropylene bags is Taiwan.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

OCT 31 1985

REFER TO
CLA-2 CO:R:CV:G
077153 JAS

District Director of Customs
Charleston, South Carolina 29402

Dear Sir:

This is in response to an Application for Further Review of Protest No. 1601-3-000119, dated December 19, 1983, filed on behalf of the importer of certain papermaking machine components from Italy.

FACTS:

At issue in this protest is the tariff status of five 1981 entries covering components of a machine for making linerboard, which the importer/protestant now attempts to aggregate under the tariff provision for machines for making cellulosic pulp, paper, or paperboard, in item 668.00, TSUS. These components are merely stated to have been imported "in several shipments over a period of time," there being no further description of the components or the particular machine in the papermaking process with which they are used. It does appear, however, that the components arrived by plane and vessel. The Italian manufacturer's packing list, however, describes, among other things, drying cylinders complete with bearings and bearing housings, a steel felt roll with similar housings, reel spools, and a series of bench boards, otherwise undescribed. It is unclear whether this comprises all or only a part of the protested merchandise.

The importer/protestant, has attempted to aggregate these shipments under tariff item 668.00, TSUS. The appraising officer, on the other hand, has merely stated that the components contained in each shipment are to be classified, in their condition as imported, in accordance with General Interpretative Rule 10(ij), TSUS, under relevant tariff provisions. It is

E2

077153

unclear from the file however, whether in the absence of a specific provision covering any or all of these parts, they would, or have in fact been classified and assessed with duty as parts, in item 668.06, TSUS.

ISSUE:

Can the doctrine of entireties be applied where components of a complete machine arrive within the Customs territory in separate shipments?

LAW AND ANALYSIS:

One of the most basic and uncontroverted principles of Customs jurisprudence, in classification and appraisement matters, is that merchandise must be classified in its condition at the time of importation i.e. brought within the Customs territory of the United States with intent to unlade. See United States v. Schoverling, 146 U.S. 76. This principle has often been cited as the basis upon which the so-called "single shipment" rule has been predicated. Certain parts of a completed article shipped on different conveyances on the same or different dates cannot be classified and assessed with duty as that article, even if a single tariff item number would encompass it. See University of Chicago v. United States, 2 Cust. Ct. 358, C.D. 159 (1939), and related cases. This principle was restated administratively in C.I.E. 642/60, dated May 18, 1960, wherein it was held that paper machinery purchased under a single contract but imported in different shipments may not be classified as an entirety for classification purposes, even though destined for installation in a single plant. Most recently, the Court of International Trade has stated that where a complete machine is disassembled in the country of exportation for transportation purposes only, and the majority of its

E3

components are shipped aboard one vessel, while the remaining components are shipped aboard another vessel, classification as a complete machine under a single TSUS item number cannot be accepted under the doctrine of entireties as long as all of the components are not imported in one shipment. See Franklin Industries Inc. v. United States, 1 C.I.T. 349, Slip Op. 81-55 (1981).

Our response to I.A. 218/79, dated March 24, 1980 (061761), to I.A. 198/79, dated September 8, 1980 (061630), and to Protest Review Decision of May 12, 1982 (069670), all of which you cite, serve as sufficient authority to classify the various components at issue here.

HOLDING:

Each shipment of components of papermaking machine parts should be classified and assessed with duty, in its condition as imported, in accordance with the cited decisions, as found to be appropriate. The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to satisfy the notice requirements of section 174.30(a), Customs Regulations, as amended by T.D. 80-271.

Sincerely,

Mr. C. F. McFeeters, Jr.
A. N. Deringer, Inc.
45 Rockefeller Plaza
Suite 3120
New York, New York 10020

Dear Mr. McFeeters:

Your letter of September 6, 1985, concerning the tariff classification of a cotton shoe mitt from Pakistan has been referred from the New York Seaport. A sample was provided with your request.

The submitted sample described as a shoe mitt with hang tape is manufactured from 100 percent cotton fabric, and is used to polish shoes. It is a rectangular piece of fabric that after being folded and sewn on three sides measures approximately 6 1/2 inches by 5 1/2 inches. The remaining side is left open to permit the insertion of a hand. The hang loop does not constitute ornamentation for tariff purposes.

The issue presented is whether the shoe mitt is classifiable as a cotton polishing cloth in item 385.30, Tariff Schedules of the United States (TSUS).

In Jeffrey Martin, Inc. v. United States, 62 Cust. Ct. 533, C.D. 3821 (1969), the Customs Court considered the scope of the eo nomine designations of item 385.30, TSUS. The precise question before the court was whether an article invoiced as "Superior Car Polishers" was a polishing cloth for purposes of item 385.30, TSUS.

The court stated that it was not sufficient for purposes of item 385.30, TSUS, that an article be used for polishing, mopping, or dusting. The article also must be a "cloth." The merchandise at bar, a strip of cloth slipped over the prongs of a handle was held to be more than a cloth according to the common meaning of that word.

The court also held that the merchandise was not within the legislative understanding of what constituted polishing cloths, citing the following language in the Summary of Tariff Information, 1929:

> Polishing cloths and dust cloths are small squares of napped cotton cloth, usually flannel, used in the household for polishing and dusting furniture or other articles. (at p.1578)

ES

With regard to a dust cloth consisting of an 18 inch square of a woven fabric that had been folded and sewn on three sides, Customs ruled in C.I.E. 150/67, dated February 1, 1967, that it was classified as an article not specially provided for, of textile materials.

Again in a ruling dated January 26, 1979, file No. 055334, we decided that an article invoiced as a "cloth ball polisher" used for cleaning bowling balls that is sling-shaped with a wide opening at the top so that the bowling ball may be placed into the polisher was not within the common meaning of the term "polishing cloth."

Based on the foregoing judicial and administrative decisions which we believe govern the classification of the shoe mitt, the shoe mitt is not a cloth for tariff purposes. Therefore, it is classifiable under the provision for, other articles, not ornamented, of cotton, other, in item 386.5300, TSUS.

There are no quotas on this merchandise. The information concerning quotas is correct as of this writing; however, importers are strongly advised to verify the quota and visa information with their local Customs office just before exportation because the requirements vary as old agreements expire and new agreements are implemented.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Sheila Rasimowicz
Johnson and Johnson
Baby Products Company
Skillman, New Jersey 08558

Dear Ms. Rasimowicz:

In a letter dated September 17, 1985, you inquired as to the dutiable status of crib arch shells and straps manufactured in Hong Kong. Samples were submitted for examination.

The sample crib arch shells and straps will be attached to baby cribs to hold toys. These shells measure approximately 7 inches by 38 inches and are made of polyethylene woven fabric. Plastic straps with velcro strips are permanently attached to the shells and serve as a means of fastening the shells to the cribs. It appears that the textile material is the component material of chief value of the samples. There are three oval shaped flaps sewn onto the underside of the arch. Velcro strips on these flaps hold display straps to which toys are attached and displayed over the baby. A flexible material which was not submitted with the samples will be inserted into the arch.

You suggest that this merchandise is classifiable under the provision for skins for toy figures of animate objects in item 737.51, Tariff Schedules of the United States (TSUS).

Schedule 7, Part 5, Subpart E, Headnote 5, TSUS, provides that "For the purposes of items 737.26 and 737.51, 'skins' are the outer coverings or shells of those dolls or toy figures which, if imported stuffed or filled, would be classified in items 737.23, 737.28, 737.30, and 737.47, but do not contain stuffing or filling in the torso when imported."

The crib arch shells are not classifiable under item 737.51, TSUS, because they do not fit within the definition of "skin" set forth above. Also, they are not in themselves used for the amusement of children.

It is our position that the crib arch shells are classifiable under the provision for articles not specially provided for, of man-made fibers, not ornamented, other in item 389.62, TSUS, and dutiable at the rate of 4 cents per pound plus 10 percent ad valorem.

Sincerely,

Arthur P. Schaffner

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

077172

DATE: NOV 20 1985

FILE: CLA-2 CO:R:CV:G
077172 JCH

TO : District Director of Customs
Savannah, Georgia 31401

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice No. 152/82 Concerning the Tariff Classification of a Vortex Flowmeter (Your Memorandum of September 1, 1982, File Ref. MAN-1-CV WDW)

The subject internal advice request was initiated by the importer in a letter dated July 6, 1982, and counsel subsequently participated in this matter on behalf of the applicant. The merchandise is a product of Japan and consists of various versions of a pipe line flowmeter in which the in-flow detection apparatus consists of a shedder bar. The actions of vortices created in the flow against the bar cause the emission from a piezoelectric element in the bar of electrical impulses which, in effect, are proportional to the rate of flow. The amplitude of the pulses is also useful for such purposes as regulating cut-in and cut-off actions.

In one version, such as for underground pipe lines, the in-line flowmeter body has an attached transmitter element which sends modified signals to an above-ground module mounted on a pole or other remote location and containing electronic components. The electronics convert the signal to a useable analog or digital form. In another version, all electrical conversions and readouts may be contained in a component attached directly to the in-line flowmeter body. In a third version, only an analog readout may be provided at the in-line flowmeter body attachment, and the converting and readout apparatus for use of the signal in digital form are located at a remote site.

It is indicated that the described flowmeters do not meet the requirements for electrical measuring apparatus in Headnote 2(a), Subpart D, Part 2, Schedule 7, Tariff Schedules of the United States (TSUS), as claimed by the importer, and, therefore, are classifiable under the specific provision for flowmeters in item 711.75, TSUS. However, it is our position that frequency as a varying electrical parameter in rate measuring apparatus does not necessarily disqualify merchandise from the cited headnote definition. Taking that into account together with the general use and method of operation of the instant merchandise, we find that each of the three described versions of the instant vortex flowmeter is classifiable under the provision

F.8

for electrical measuring, checking or analyzing instruments and apparatus, and parts of such apparatus, in item 712.49, TSUS. The column 1 rate of duty required under that provision in 1982 was 8.1 percent ad valorem.

Please furnish a copy of this decision to counsel for the IA applicant Louis S. Shoichet, Esq., Tompkins & Davidson, Counselors at Law, One Whitehall Street, New York, New York 10004.

San Diego, California 92123

Dear Mr. Kovacs:

Your letter of October 22, 1985, concerns the dutiable status of various alginate products.

Classification of the products is as follows:

Commodity	TSUS No.	Rate of Duty
Ammonium Alginate	425.09	3.3% ad valorem
Potassium Alginate	426.84	3.3% ad valorem
Sodium Alginate	426.88	4.7% ad valorem
Alginic Acid	493.68	6.9% ad valorem

All of these compounds are entitled to be entered free of duty or at a reduced duty rate upon compliance with the law and regulations if products of:

1. A country whose products are entitled to treatment under the Generalized System of Preferences;

2. A country whose products are entitled to treatment under the Caribbean Basin Economic Recovery Act;

3. A Least Developed Developing Country;

4. U.S.-Israel Free Trade Area.

Sincerely,

John T. Lizl

District Director of Customs
Boston, Massachusetts 02109

Dear Sir:

Re: Decision on Application for Further Review of Protest Nos. 0401-2-001153, 1152, 1119, 1117 and 1118

These protests were filed against your decisions in the liquidations of the following entries.

Protest No.	Entry No. and Date		Date of Liquidation
0401-2-001153	317434	8/5/82	8/31/82
0401-2-001152	317433	8/5/82	8/31/82
0401-2-001119	317400	8/5/82	8/20/82
0401-2-001117	317398	8/4/82	8/20/82
0401-2-001118	317399	8/4/82	8/20/82

FACTS:

The athletic footwear involved, manufactured in Korea, was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather and are therefore properly classifiable under the provision for other footwear, of leather, for men, youths, and boys in item 700.35, TSUS.

ISSUE:

Do the component cost breakdowns submitted show that the shoes are in chief value of leather?

LAW AND ANALYSIS:

In all instances the "sole part labor" is the critical item on the detailed cost breakdowns. It is our position that this term is the 'stockfit' i.e., putting together the pieces of the bottom after making

E12

them into the appropriate shapes. Since we presume that all the pieces of the bottom are rubber or plastics, it follows that the joining costs should be added to the rubber and plastics costs. When this is done, the component of chief value changes from leather to rubber and plastics in each case.

HOLDING:

The athletic footwear was properly classified as liquidated under item 700.95, TSUS.

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Ms. Joan Padduck
Morse Shoe International
555 Turnpike Street
Canton, Massachusetts 02021

Dear Ms. Padduck:

Your letter of September 11, 1985, requesting a tariff classification for plastic shoes from Taiwan or South Korea, was referred to this office for reply.

The footwear at issue is your pattern number P/N 6G-12539C-F322 (girls' size in blue) and P/N 6C-12539C-F322 (girls' size in pink). They are both children's athletic shoes with slightly rolled, calendared soles and uppers with a vulcanized rubber bumper in front and back. You state that the toe bumpers and heel bumpers encircle the shoes by approximately 39.5 percent and 40 percent, respectively.

The only issue is whether or not these shoes have foxing-like bands. The instant footwear has a calendar sole with a slightly rolled sole which gives the shoe the appearance of the sole overlapping the upper. We do not consider the rolled sole construction to be a foxing-like band because the sole has been rolled up onto the surface of the upper so little that when viewed from the side the edge of the soling material is seen (instead of the calendared bottom of the soling material).

In T.D. 83-116, 17 Treas. Dec. 229 (1983), it was found that foxings and foxing-like bands "must encircle or substantially encircle the upper." Inasmuch as the "mini-bands" on the instant footwear do not substantially encircle the upper, we do not consider them to be foxing-like bands either.

The instant footwear is classified under the provision for other footwear having uppers of which over 90 percent of the exterior surface area is rubber or plastics, other, in item 700.56, Tariff Schedules of the United States (TSUS), dutiable at the rate of 6 percent ad valorem.

Sincerely,

Arthur P. Schifflin

New York, New York 10004

Dear Mr. Levy:

Your letter dated September 23, 1985, addressed to our New York office concerning in part the tariff classification of five clown hats manufactured in Hong Kong, has been referred to this office for a direct reply to you. Samples of the clown hats were submitted for examination.

The samples submitted are five bowler type hats. They are made of plastics except for lengths of man-made material simulating hair which extend down from underneath the hats.

It is our position that headwear represented by the samples is classifiable, if in chief value of plastics, under the provision for other headwear, of rubber or plastics in item 703.72, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 2.4 percent ad valorem or entitled to duty free treatment under the Generalized System of Preferences, if otherwise qualified. If the hats are in chief value of manmade fibers, they would be classifiable under the provision for other headwear of man-made fibers in item 703.16, TSUS, and currently dutiable at the rate of 12 cents per pound plus 9.5 percent ad valorem.

Sincerely,

Arthur P. Schaffner
for Harvey B. Fox
Director, Classification
and Value Division

Dear Mr. Scanlon:

Re: JS #85-0353

Your letter of October 4, 1985, concerns the tariff status of wire screening made in Mexico.

On the basis of the samples submitted and manufacturing description, the screening will be classifiable as wire screen, not cut to shape, woven (of simple warp and weft construction), in items 642.50 through 642.78, TSUS, depending on mesh size and composition.

Enclosed is a copy of the tariff schedule provisions covering these items.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Edward C. Norman
Norman Associates
170 Castleair Drive
Kennesaw, Georgia 30144

Dear Mr. Norman:

Your request of March 18, 1985, for a tariff classification of narrow fabric edgings has been referred to us for a reply.

The edgings are described as being just under a half-inch in overall width, made in a single operation, and come in continuous lengths. Style 36 43 consists of a heavy metallic yarn with an 8-ply spun rayon yarn core that racks or snakes back and forth forming tight loops that create the outward dimensions of the material. Each group of 10 single-ply multifiliment core metallic yarns are used as two "single yarns," which are laid on top of the large yarn and coiled within the loops formed by this larger yarn. The yarn configuration is held together by two parallel rows of chain stitching spaced approximately one quarter of the distance from each edge.

Style 36 83 is composed of two metallic plied yarns, laid down in opposition to one another, which alternately form long and short loops that mesh, creating an asymmetrical scalloped appearance along both edges. A 13 strand metallic flat braid racks back and forth between the "indentations" of the scallops on top of these yarns. The three "yarn" systems and their design are held together by two parallel rows of chain stitching also one quarter of the distance from the edges.

An examination of the samples shows that they are neither knit nor woven. Because Headnote 2(a)(i), Schedule 3, Part 4A, Tariff Schedules of the United States (TSUS) requires that narrow fabrics must be knit or woven, the articles cannot be classified as narrow fabrics.

Inasmuch as the articles will be used to hem blouses and shirts and are known, bought and sold in the trade as edgings or trimmings, they are classifiable under item 357.70, TSUS, which provides for other trimmings. As products of England they are dutiable at the 1986 rate of 10.5 percent ad valorem.

Sincerely,

Harvey B. Fox

Mr. Arthur Young
Arthur Young, Clarkson Gordon & Co.
P.O. Box 251
Royal Trust Tower
Toronto-Dominion Centre
Toronto, Canada M5K 1J7

Dear Mr. Young:

In your letter of April 25, 1985, you inquire as to the tariff classification of certain automotive wire harness assemblies. Specifically, you seek clarification of the applicability of the Automotive Products Trade Act of 1965 (APTA), to the situation you describe.

Essentially, wire of Canadian origin is stripped and cut in Canada and terminals of United States origin attached at both ends to make wire sets. Blocks (otherwise undescribed), tape and tubing of United States origin are sent to Canada where they are batched with the wire sets into knocked down sets and shipped to your client's subsidiary in Mexico for assembly. It is the tariff status of the completed harness assemblies as they enter the U.S. that is the subject of this inquiry.

You indicate that such merchandise from Mexico would ordinarily be classifiable under the provision for ignition wiring sets and wiring sets designed for use in motor vehicles and craft provided for in Part 6 of Schedule 6, under item 688.12, Tariff Schedules of the United States (TSUS). However, you maintain that the wire harnesses are "Canadian articles" as defined in General Headnote 3(c)(ii), TSUS, inasmuch as they were completed in Canada with the use of U.S. and Canadian components, and were imported indirectly into the Customs territory, in accordance with General Headnote 3(c)(i), TSUS. Consequently, you conclude that the duty-free provision for ignition wiring sets which are Canadian articles and original motor-vehicle equipment, in item 688.13, TSUS, represents the proper classification.

Schedule 6, Part 6, Subpart B, Headnote 2(a), TSUS, defines "original motor-vehicle equipment," as used in the schedules with respect to a Canadian article, as:

> A Canadian article which has been obtained from a supplier in Canada under or pursuant to a written order, contract, or letter of intent of a bona fide motor-vehicle manufacturer in the United States, and which is a fabricated component intended for use as original equipment in the manufacture in the

> United States of a motor vehicle, but the term does not include trailers or articles to be used in their manufacture (emphasis added).

Therefore, aside from the question of whether the subject wiring sets are Canadian articles and whether they are imported indirectly into the Customs territory of the United States, they do not qualify as original motor-vehicle equipment, within the cited headnote, because they were obtained from a supplier in Mexico, not Canada. For this reason, the duty-free provisions of item 688.13 do not apply.

Sincerely,

Arthur P Schaffner

24 DEC 1985

District Director of Customs
U.S. Customhouse
1 E. Bay Street
Savannah, Georgia 31401

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1703-3-000138

This protest was filed against your decisions in the liquidations on January 28, 1983, of entry No. 82-253424 dated February 24, 1983, entry No. 82-255545 dated May 3, 1983, entry No. 82-256434 dated June 8, 1982, and entry No. 82-256627 dated June 18, 1982.

FACTS:

Certain athletic footwear produced in Korea was classified in liquidation under the provision for other footwear in item 700.95 Tariff Schedules of the United States (TSUS).

The protestant claims that the various styles of athletic shoes are classifiable according to gender and value per pair under item 700.35 or item 700.45, TSUS.

ISSUE:

Does the documentation provided by the protestant show that the footwear is in chief value of leather?

077348

LAW AND ANALYSIS:

As to the footwear covered by stock No. 73264, we disagree with your analysis but concur with your classification under item 700.95, TSUS. The cost of the leather claimed by the maker per Exhibit A is $1.1514. The maker apparently overstated the cost of the leather material in that he included salvaged waste in the "total purchased" and overstated slightly the "leather present". The appropriate corrections reduce the leather material cost to approximately $.90, not $.8395. Also, you indicate that the comparison for chief value purposes should be between the leather material cost and the rubber and plastics material cost. Actually, all costs incurred prior to "final assembly" must be allocated to the subassemblies. Therefore, the comparison of costs is as follows:

Leather	Rubber and Plastics
$.90 material	$.833 material cost
.052 cutting cost	.023 cutting cost
.243 trimming cost	.223 trimming cost
	.189 labor process sole part
$1.195	$1.268

We agree that all the stock numbers cited in Part D of your CF 6445 reply should remain classifiable under item 700.95, TSUS. In particular, we agree that those styles for which no component material of chief value breakdowns have been submitted should be classified under item 700.95, TSUS.

071348

The importer has an affirmative obligation to supply the cost breakdowns pursuant to instructions contained in Headquarters telex 10378.

HOLDING:

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner
for Harvey B. Fox

TO : Area Director of Customs
New York Seaport
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Reconsideration of Headquarters' Ruling Letter (HRL) 074944

We are responding to your memorandum dated April 26, 1985, requesting that this office reconsider HRL 074944 dated December 17, 1984, where a woven camisole that extends straight across the bustline and reaches to the waist with shoulder straps was considered to be beyond the scope of the common meaning of the term "blouse" which lexicographic authorities agreed includes certain garments that cover the body from the neck to the waist.

It is your view that woven camisoles are considered to be blouses, because they are designed to be seen and worn on the upper part of the body with pants, skirts, or under jackets. You state that this conclusion is substantiated from interviews with importers and two domestic trade associations who upon examining garments similar to those ruled upon in HRL 074944 decided that they were blouses. In opposition to the prevailing view was the statement of another importer of women's blouses who said the camisoles were not blouses.

Specifically, you disagree with our conclusion that the camisole was excluded from the common meaning of the term "blouse" because it did not cover the body from the neck to the waist.

We did not mean to imply that to be classifiable as a blouse, a garment must extend to the neck. Obviously, blouses can and do have a variety of necklines including inter alia, turtle, U, V, scooped, and plunging necklines. It is, however, the presence of a neckline that is common to all blouses. That much is apparent from the definition of the term "blouse" in the lexicons cited in HRL 074944, and was our reason for excluding the camisole from the common meaning of the term "blouse."

We adhere to our position that a garment that extends straight across the chest with narrow shoulder straps does not have a neckline. This position is supported by the classification of similar styled women's knit camisoles. The National Import Specialist for women's knitwear informs us that such garments are classifiable as tops rather than blouses.

F10

In the "Textile Category Guidelines for Fabrics and Garments Reported Under Textile Agreements" published as C.I.E. 36/79 on September 1, 1979, "a tube-type garment (which may or may not be waist length) having a straight top with or without attached shoulder straps, and off-the-shoulder tops do not, strictly speaking, have a "neck-area" as required by the "Shirt" and "Blouse" guidelines and would be included [as a top] here."

Knit camisoles are specifically provided for in the tariff schedules as tops. There is no corresponding description for camisoles under the provisions for women's woven wearing apparel. The tariff provision for blouses is not a basket provision but an eo nomine designation that excludes garments that do not have necklines. Woven camisoles lacking necklines are not classifiable as blouses.

Accordingly, the camisoles are properly described and classified as other women's wearing apparel, not ornamented, of man-made fibers, not knit, other in item 383.92 (now 384.94), TSUS. Thus, HRL 074944 is affirmed.

Harvey B. Fox

Salvatore E. Caramagno, Esq.
Ross & Hardies
1090 Vermont Avenue, N.W.
Washington, D.C. 20005

Dear Mr. Caramagno:

This is in reply to your letter dated October 30, 1985, submitted on behalf of your client, Itex Corporation, regarding the status of New York Ruling (NYR) 811337 dated December 12, 1984. That ruling held that an orange beverage consisting of diluted orange juice concentrate having a brix value of 10.8 to 11.2 was classified under item 166.40, Tariff Schedules of the United States (TSUS), as a beverage, not specially provided for.

We wish to advise you that NYR 811337 is not in accordance with the current views of the Customs Service as to what is considered to be concentrated orange juice, and what should be classified under item 165.29, TSUS. Accordingly, under authority of 19 CFR 177.9(d)(1), we are hereby revoking NYR 811337, effective upon receipt of this letter. We are reviewing the effect of this revocation in accordance with 177.9(d)(2) and will advise you in this matter as soon as possible. Our reasons for revoking the ruling are as follows.

Items 165.27 and 165.29, TSUS, as amended by the Trade and Tariff Act of 1984 (P.L. 98-573) provided as follows:

Fruit Juices,* * *:

* * *

Citrus fruit:

* * *

Orange:

165.27	Not concentrated and not made from a juice having a degree of concentration of 1.5 or more (as determined before correction to the nearest 0.5 degree)	.20¢ per gal.
165.29	Other	.35¢ per gal.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F12

Orange juice was not previously provided for by name in the tariff schedules, but is now eo nomine provided for in the Tariff Schedules by reason of the 1984 amendment, either as (in effect) natural unconcentrated orange juice in item 165.27 or as orange juice in any other form in item 165.29. Item 165.29 encompasses the product which was the subject of NYR 811337 not only because it is specifically provided for but also because of the expressed intent of Congress to preclude avoidance of a higher duty and to tax all forms of orange juice other than natural juice at the higher rate. See Senate Report No. 98-308, 98th Cong. 1st. Sess. (November 10, 1983), at pages 12 through 13.

An eo nomine designation, without limitation or a shown contrary legislative intent, judicial decision, or administrative practice, and without proof of commercial designation, includes all forms of the article. Nootka Packing Co. v. United States, 22 CCPA 464 (1935). Consequently, the diluted orange juice concentrate described in NYR 811337 is properly included within the provision for other orange juice, item 165.29, TSUS.

In ascertaining what is or is not orange juice, we believe that Customs is not required to follow the FDA definition of orange juice; however, the FDA definition of orange juice accurately reflects the common and commercial definition of what is or may be an orange juice. 21 CFR 146.135 defines orange juice as "the unfermented juice obtained from mature oranges of the species citrus sinensis." This is the definition of orange juice, as distinguished from the listing of products containing orange juice set forth in the FDA regulations. Therefore, this will be the definition the U.S. Customs Service will follow for orange juice, that is, "the unfermented juice obtained from mature oranges of the species citrus sinensis."

No established and uniform practice for the classification of this product exists.

Sincerely,

Harvey B. Fox

Re: Internal Advice Request 56/85; Classification of an NC Tooling System

Dear Sir:

This ruling is issued in response to the request for internal advice filed by importer Stanley Sheppard Co., Inc., (Sheppard) of Berlin, Connecticut. Sheppard requests review of your classification of tooling systems used with machining centers. The merchandise under review was the subject of Entry 1001-85-344972-4 which was first presented to Customs on March 8, 1985. Customs rejected the entry stating that all articles entered were classifiable as accessories used principally with machine tools ... : Other: Accessories: Other, under the provisions of item 674.5600, Tariff Schedules of the United States Annotated (TSUSA). This internal advice is our decision on the classification issues raised as to products specifically included in the above-noted entry.

FACTS:

The following products were included on the invoice accompanying the entry. Customs proposed classification of these articles and the importer's suggested classification are as follows:

Article	Customs	Importer
Oil Feed Holders	674.56	674.50
Reduction Sleeves	674.56	674.50
High Speed Spindles	674.53	674.53 or 674 50
Reduction Collets	674.56	674.50
Oil Feed Tappers	674.55	674.55 or 674.50
Right Angle Heads	674.56	674.55 or 674.50

Article	Customs	Importer
Stop Blocks	674.56	674.53
Auto Tappers	674.55	674.55 or 674.50

The importer has submitted descriptive catalogues and has challenged each Customs proposed classification. He has identified the tooling system as being specifically designed for use with the machining center.

All of the above products originally were attempted entry by the importer under the provisions of item 674.55, TSUSA, as accessory machines used principally with machine tools. The classification was rejected because none of the items are machines in themselves.

In response to Customs reclassification of the products, petitioner presents alternative classifications (listed above) to those originally claimed in the rejected entry.

The oil feed holders and reduction sleeves are used to hold drills, specifically those which are designed to permit coolant (generally oil) flow during the drilling. The oil feed holder is designed with a hole to permit coolant flow directly to the cutting tool. The reduction sleeve is used to hold smaller tools to be used with the oil feed holder.

High speed spindles are used to hold small diameter cutting tools which require a cutting speed higher than can be attained with the standard machine tool spindle. Reduction collets hold smaller tools within the high speed spindle.

Oil feed tappers combine oil feed holders and tapping heads. The tapping heads are cutting tools used for making threads.

Auto tappers consist of an adapter, a tapping head and a tap collet. The taps are held in a tension and compression collet-type holder.

Right angle heads are devices that enable a machining center to hold a tool at a 90 degree angle. It is designed to hold other tool holders.

Stop blocks are articles that are tapped and permanently mounted to the spindle flange of the machining center. They are used to properly position some of the different tool holders. Their use is essential when non-standard tooling is used. They do not hold tools but maintain a fixed position.

077391

G1

ISSUE:

Are the above-described articles classifiable as tool holders, accessories used principally with machine tools, or parts of machine tools?

LAW AND ANALYSIS:

Customs has suggested that the articles in question be classified as accessories for machine tools rather than as tool holders or parts of machine tools.

The definition of tool holders found in the second edition of the Tool Engineer's Handbook has been recognized by ruling. See HQ letter dated June 9, 1978, (File No. 048787). This authority defines a tool holder as a "device for holding a cutting tool in a definite position with respect to the tool slide of a machine tool." Item 674.50, TSUSA, is an eo nomine provision for tool holders.

An accessory is an article which is used in conjunction with a machine, but such use is optional and unessential. C.I.E. 957/65. The object or device need not be essential in itself but it adds to the effectiveness of something else. United States v. C.F. Liebert, 59 CCPA 43, C.A.D. 1035 (1971). By comparison, parts are component, constituent and integral parts of articles without which such merchandise will not function. United States v. Antonio Pompeo, 43 CCPA 9, C.A.D. 602 (1955). A provision for "parts" of an article covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such part. General Headnote 10(ij), TSUSA.

The oil feed holder is specifically used to hold drills. The reduction sleeve is used in conjunction with the oil feed holder to permit flexibility in the size of tool held. The principal and predominant use of these articles is to hold a cutting tool in a definite position with respect to the tool slide of the machine tool. They fit, very specifically, in the definition of tool holders and must be classified such. The coolant flow feature enhances the tooling operation, but does not serve to elevate the oil feed holder to anything more than a tool holder. The reduction sleeve, while listed in descriptive literature as an "accessory" of the oil feed holder, is, in fact, a tool holder. ORR Ruling 73-71 classified tool holders holding other tool holders under the provisions of item 674.50, TSUSA. Accordingly, the correct classification for these products is that of tool holders under the provisions of item 674.50, TSUSA.

047391

G2

High speed spindles and reduction collets are used predominantly as tool holders. As with the oil feed holders and reduction sleeves, the subject articles permit higher efficiency of the tooling function. They are not "more than" tool holders. High speed spindles and reduction collets are also classifiable as tool holders under the provisions of item 674.50, TSUSA. The high speed spindle cannot be classified as a part because of the more specific tool holder classification provision.

The oil feed tappers and auto tappers hold taps in a tension and compression collet-type holder. The oil feed tappers have much the same coolant flow features as the oil feed holders. Tension and compression springs are indicated in the descriptive literature provided by the importer on these articles. Accordingly, oil feed tappers and auto tappers also are classifiable as tool holders under the provisions of item 674.50, TSUSA. The suggested classification under item 674.55 must be rejected because neither the oil feed tappers or auto tappers can be considered to be machines in themselves.

Right angle heads are used to hold other tool holders at a 90 degree angle to aid in flexibility of use. In accordance with ORR Ruling 73-71, they are classifiable as tool holders under item 674.50, TSUSA.

Finally, stop blocks, as the importer notes, are permanently fixed to the spindle flange of a machining center. Their use is essential when non-standard tooling is used. In these certain applications, stop blocks do more than add to the effectiveness of the machining center. Inasmuch as no specific tariff classification provision exists for these articles, they are most properly classified as other parts of machine tools: other parts, under the provisions of item 674.53, TSUSA.

HOLDING:

The following articles used with an N/C machining system are classifiable as tool holders under the provisions of item 674.50, TSUSA: oil feed holders, reduction sleeves, high speed spindles,

167391

reduction collets, oil feed tappers, right angle heads and auto tappers. Stop blocks, which are permanently affixed to flanges in the tooling system, are classifiable as parts of machine tools under the provisions of item 674.53, TSUSA.

EFFECT ON OTHER RULINGS:

T.D. 67-113(1) held that a taper spindle installed in a machine tool in order to obtain greater speed from the spindle is classifiable as accessories for machine tools under item 674.55, TSUSA. In that case the spindle was an optional attachment only used when greater speed in spindles was required. The decision did not indicate whether the spindle was used in a multifunction machining center.

This decision overrules T.D. 67-113(1) in holding that spindles used to hold cutting tools when greater drilling speeds are required are classifiable as tool holders under item 674.50, TSUSA.

District Director of Customs
2039 Federal Office Bldg.
909 First Ave.
Seattle, Washington 98174

Dear Sir:

Re: Internal Advice No. 69/85, Classification of Water Transmitted by Pipeline

Point Roberts, Washington, located at the tip of a peninsula which extends southward from the Canadian mainland below Vancouver, B.C., is said to be accessible by land only through Canada.

Since only a limited amount of potable water from wells is said to be available, it is intended either to have water delivered by pipeline from Canada across the land border or through a seabed pipeline from Blaine, Washington. The first alternative is the most economical. The water is intended to be used not only for drinking but also for washing and all the other normal uses for water.

The issue is whether the product is classifiable in item 166.10, TSUS, the provision for all mineral waters, natural, imitation or artificial.

Headnote 1, Part 12(b), Schedule 1, TSUS, states that the subpart (in which item 166.10 appears) covers only products fit for use as beverages. It is argued that since the water need only be capable of being used as a beverage to be classified as a beverage, the fact that it may have a variety of uses does not preclude classification as a beverage. The Tariff Classification Study notes that Part 12 covers only products which are fit for use as beverages or for beverage purposes.

While Headquarter's decision of January 20, 1984, (072700) is relied on for classifying potable water intended for beverage use under item 166.10, TSUS, the exact description of the water in that case was not given. In this

077393

case there is no indication that the "potable water" is the mineral waters or table waters described in the Tariff Summaries as being classified in item 166.10, TSUS. In fact from the description of the article, it appears similar to the water classified by Customs and court decisions for over 80 years. In T.D. 23923 (1902) it was stated that "in our opinion natural water is a crude mineral both chemically and according to common understanding, and would, therefore, be free of duty under paragraph (614, crude minerals)," a predecessor provision for item 523.81, TSUS, the provision for crude mineral substances. In 1957, Customs held ordinary drinking water to be a crude mineral substance in paragraph 1719, Tariff Act of 1930 (TC 464.622). In 1984 it was ruled that plain water was classifiable as a crude mineral substance in item 523.81, TSUS (075152).

Therefore, it is concluded that the water delivered by pipeline in this case, if "plain water", is classifiable as a crude mineral substance in item 523.81, TSUS, free of duty. However, if it has been chemically treated, by chlorination or fluoridation, for example, it is no longer a crude mineral, and would be classified under the provision for other mineral substances, not decorated, in item 523.91, TSUS, dutiable at 5.6 percent ad valorem.

Sincerely,

Russell X. Arnold
Chief, Value and Special
Classification Branch

Re: Decision on Protest and Application for Further Review No. 3901-5-000524, Dated April 11, 1985

Dear Sir:

The above-noted protest and application for further review were filed by counsel for protestant Sugino USA, Inc., of Schaumberg, Illinois. At issue is the classification of self-feeding drill units. These drill units were the subject of Consumption Entry No. 84-754495-2, dated September 25, 1984. The importer classified them as machine tools: metal working machine tools: drilling machines, not used or rebuilt, valued under $2,500, under the provisions of item 674.31, Tariff Schedules of the United States (TSUS), dutiable at the rate of 4.7 percent ad valorem. Customs reclassified the articles as parts of, and accessories used principally with, machine tools: other parts, under the provisions of item 674.53, TSUS, dutiable at the rate of 5.3 percent ad valorem. The entry was liquidated at the latter classification and duty rate on January 11, 1985. The subject protest was filed in a timely manner after liquidation.

While not the subject of the protest, we also note that articles known as synchro tappers were included in the subject entry and were classified as parts of machine tools under item 674.53, TSUS. This decision will also review the classification of these articles.

FACTS:

As described in the Tool and Manufacturing Engineers Handbook, 4th Edition, Chapter 9, p. 9-13 (1985), self-feeding drill units, also known as automatic drill units, conduct drilling functions without the requirement of operation by hand (unlike the drill press They can be mounted on drill stands or fixtures and have the advantage of portability. The stroke, speed, thrust and feed are set prior to use, and the entire drilling operation is automatic and repetitive. The units have the capability of accepting multiple spindle drillheads in order to produce two or more holes simultaneously.

G1

These self-feeding units come in four basic types: electromechanical units with air feed, air powered units, mechanical units, and hydraulic units. In the subject protest, two models, the SFA and SFB, are air powered. Model ESB is electromechanical. Model MPSU is a mechanical unit.

As noted, synchro tappers were classified by the importer as parts of, and accessories used principally with, machine tools: other parts, under the provisions of item 674.53, TSUS. Synchro tappers are lead-screw tapping units. They provide automatic machining operations and can work alone or in tandem with other self-feeding units.

ISSUES:

Are the self-feeding units properly classifiable as metal working machine tools under item 674.31, TSUS, or as parts of machine tools under item 674.53, TSUS?

Are synchro tappers properly classifiable as parts of machine tools under item 674.53, TSUS, or under some other TSUS item number?

LAW AND ANALYSIS:

ORR Ruling 683-70, dated June 24, 1970, classified self-contained drilling and tapping units, described as being mounted on fixtures with external actuation required, as parts of machine tools under item 674.53, TSUS. It is upon this ruling that Customs classification of the subject drill units is based. The 1970 ruling does not delineate the reasoning for such classification.

Counsel cites the definition of a machine tool as provided in Headnote 1, Schedule 6, Part 4, Subpart F, TSUS, which states:

> "For purposes of this subpart ...
> (a) the term 'machine tool' means any machine used for shaping or surface-working ...
> (i) metals (including metallic carbides)
> ... whether by cutting away or otherwise removing the material ..."

It is averred that the subject articles qualify for such definition in that they are used for surface work on metal and that they are machines. Case law is cited as supporting a finding that the self-feeding units are, in fact, machines.

077458

There is no "judicial determination" of what a machine is. It remains simply a question of common meaning and each case must be decided on the basis of its own facts, technical and legislative. United States v. IDL Mfg. & Sales Corp., 48 CCPA 17, C.A.D. 756 (1960). However, the Columbia Encyclopedia definition of a machine, i.e. a device which may be either simple or complex, whose function is to increase the intensity of an applied force, or to change its direction, or to change one form of motion or energy into another form, has been recognized by courts on more than one occasion. United States v. IDL, supra., 48 CCPA at 23. Nord Light, Inc. v. United States, 49 CCPA 12, C.A.D. 786 (1961).

The subject drilling units fit, in our view, the Headnote definition of machine tools. There is no dispute that they perform work on metal. In addition they qualify as machines because they are complex articles that increase the intensity of an applied force, i.e. the drill heads. That they are not self-actuated, rather relying on external power sources, is not determinative in their classification as machine tools. Articles need not be self-actuating in order to be classified as machines. Nord Light v. United States, supra., at p. 15.

This office has held that the administrative review of protests is nonadversarial in nature. Headquarters Ruling Letter dated January 6, 1984 (Control No. 070686). As such, the scope of a decision letter on a protest is not limited to issues raised specifically by the protestant. Customs may consider and rule on issues sua sponte, if it would result in a rate of duty more favorable to the protestant. It is under this authority that review of the classification of the synchro tapper is made.

The synchro tapper also qualifies as a machine tool under the above-noted definition. It is clearly used to perform surface work on metal. It is a self-contained unit that falls within the definition of a machine. Accordingly, its classification as parts of machine tools is erroneous. However, because it performs a tapping function, it does not qualify as a boring, drilling or milling machine. Classification under items 674.31, 674.33 or 674.34, TSUS, is precluded.

HOLDING:

Self-feeding drill units, whether or not self-actuated, are classifiable as machine tools: metal working machine tools: drilling machines, not used or rebuilt, valued under $2,500, under the provisions of item 674.31, Tariff Schedules of the United States (TSUS), dutiable at the rate of 4.7 percent ad valorem.

Synchro tappers are properly classifiable as metal-working machine tools: other, under the provisions of item 674.35, TSUS, dutiable at the rate of 5.2 percent ad valorem.

Accordingly, the protest, as it regards the classification of the self-feeding drill units, should be allowed. Protestant should also be informed of the reclassification of the synchro tappers. A copy of this decision should be given to the protestant when notice of action is given on Customs Form 19.

EFFECT ON OTHER RULINGS:

ORR Ruling 683-70 is overruled insofar as it deals with the classification of self-contained drilling and tapping units.

Sincerely,

Arthur R. Schaffner

Mr. Russ Hoffer
Sears Merchandise Group
Department 733X
Sears Tower
Chicago, Illinois 60684

Dear Mr. Hoffer:

Your letter dated July 22, 1985, requested the tariff classification of a cover specially designed for sewing machines.

The sample submitted with your request is a textile cover stated to be in chief value of man-made fibers that has the following dimensions: 16 1/2 inches by 12 inches by 6 inches. One pocket is coextensive with the side panel. Another pocket spreads across the gusset. Spanning the top panel is an aperture measuring approximately 9 1/2 inches by 3 inches through which a sewing machine handle is inserted. This permits a user to grasp the handle and carry the sewing machine when the cover is slipped over the machine.

On September 24, 1985, during a telephone conversation you indicated that the cover is designed to fit a variety of sewing machines geared for home use.

Your proposed classification for the cover is under the provision for other articles not specially provided for, of textile materials, not ornamented, of man-made fibers, other, other in item 389.6270, Tariff Schedules of the United States Annotated (TSUSA).

The National Import Specialist asserts that the proper classification for the cover is under the provision for luggage, of textile materials, whether or not ornamented, other, other in item 706.4152, TSUSA. A variety of articles that are considered to be "luggage" are enumerated in Headnote (2)(a), Part 1D, Schedule 7 of the tariff schedules:

2) For the purposes of the tariff schedules -

(a) The term "luggage" covers --
(i) travel goods, such as trunks, hand trucks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel; and

G11

(ii) brief cases, portfolios, school bags photographic equipment bags, golf bags, camera cases, binocular cases, gun cases, occupational luggage cases (physicians', samples, etc.), and like containers and cases designed to be carried with the person, except handbags as defined herein;

Without question the subject sewing cover is not described by the designated articles in either subsection of the headnote, nor as like articles designed to contain clothing or other personal effects during travel for purposes of subsection (i) of the headnote.

The theory advocated by the National Import Specialist is that the sewing machine cover is a like container and case designed to be carried with the person. Definitions of the term "case" are cited to demonstrate that the sewing machine cover is a "like" case.

We disagree with this approach to ascertaining the article's classification. The exemplars enumerated in subsection (ii) of the luggage headnote are all receptacles for holding objects. A characteristic common to all the exemplars is the presence of a base on which the object to be contained is placed. If an article is to be classified under the luggage provisions, it must hold an object. The sewing machine cover, by contrast, is an article that fits over a sewing machine. We would suggest that it is comparable to a dust cover. Therefore, the sewing machine cover is not "like" the cases or containers described in the headnote.

Thus, the sewing machine cover is classifiable in item 389.6270, TSUSA. Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

CLA-2:CO:R:CV:G
077387 c

077387

Mr. Walter Mugavin
52 Sunset Drive
Yonkers, New York 10705

Dear Mr. Mugavin:

In our letter to you dated December 17, 1984 (our file 075233-810972), we held that certain garment bags manufactured in Korea and represented by samples designated as items A, B and D are classifiable under the provision for other luggage of other materials in item 706.62, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 20 percent ad valorem.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides that "For the purposes of the tariff schedules -- (a) the term 'luggage' covers -- (i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel".

Our rationale for classification under item 706.62, TSUS, was predicated on the following:

(1) The garment bags like the exemplars set forth in the headnote are "travel bags" designed to protect clothing while traveling,

(2) the garment bags were advertised as "travel bags", and

(3) they appeared to be substantially constructed for this purpose.

We have reconsidered our position in this matter and it is now our opinion that the garment bags are properly classifiable under the provision for other household articles not specially provided for, of rubber or plastics in item 772.15, TSUS, and dutiable at the rate of 4.7 percent ad valorem or entitled to free entry under the Generalized System of Preferences, if otherwise qualified.

G13

The rationale for reversing our previous holding as to the classification of the garment bags is as follows:

(1) It has been consistently our position to regard substantiality of construction as essential to a finding that an article is designed for travel,

(2) in this instance our original observation that the bags were substantially constructed for travel purposes was erroneous,

(3) we now perceive these bags to be of insubstantial construction which precludes their being "designed to contain clothing or other personal effects during travel,"

(4) the fact that the garment bags were advertised as being designed for travel is not conclusive as to their design purpose, and

(5) the bags are chiefly used in the household for storage purposes.

Sincerely,

Arthur P. Scheffler

Re: Classification Ruling on Synthetic Ropes

Dear Ms. Perez:

This is in response to your letter of October 4, 1985, which requested a ruling from this office concerning the classification of synthetic ropes with spliced eyes on one end. The ropes are the product of Korea.

The four types of rope to be imported are described as follows:

1) "Poly" 8-strand braid, 2-3 inches in diameter, imported in 540- and 720-foot lengths, having 6-foot spliced eyes on one end, with a claimed chief use as steamship mooring lines.

2) "Poly" 3-strand twisted rope, 1 and one-half to 4 inches in diameter, imported in 200-, 300-, and 600-foot lengths, having 3- and 6-foot spliced eyes, with a claimed chief use as towing lines.

3) Nylon 8-strand braid, 3-6 inches in diameter, imported in 200-, 300-, and 600-foot lengths, having 3- and 6-foot spliced eyes, with a claimed chief use as "snatch lines" for towing rigs and barges.

4) Nylon 3-strand twisted rope, 1 and one-half to 4 inches in diameter, imported in 200-, 300-, and 600-foot lengths, with 3- and 6-foot spliced eyes, with a claimed chief use as "snatch lines" for towing rigs and barges.

No samples of the "poly" products were provided. The term "poly" is not defined in your submission. For purposes of this ruling, it is assumed that "poly" refers to polypropylene.

A3

Initially, it should be noted that Customs, through publication of T.D. 85-153, reclassified certain polypropylene rope and twine made from fibrillated plastic film or strips over one inch wide as cordage of man-made fiber under Schedule 3, Tariff Schedules of the United States (TSUS), rather than as articles of plastics under Schedule 7, TSUS. Assuming the subject polypropylene ropes to be comprised of fibrillated plastic film over one inch wide, classification under Schedule 7 is precluded. This reclassification became effective December 20, 1985.

For classification purposes, the term "cordage" is defined in Headnote 1(a), Schedule 3, Part 2, TSUS, as "assemblages of textile fibers or yarns, in approximately cylindrical form and of continuous length, ... , designed and chiefly used as an end product, ... , but the term does not include -- (ii) braids...". Braids are classifiable under Schedule 3, Part 4, Subpart A, TSUS, but only if such braids are "in the piece".

The term "continuous length" has not been the subject of judicial interpretation. The subject products will be imported in minimum lengths of 200 feet. It is our view that this product, imported in lengths of 200 feet or more and without submission of more convincing evidence that it will be used in the imported sizes, is sufficiently without cessation so as to be considered continuous for classification purposes.

The splicing of eyes to the ends of ropes imported in sizeable continuous lengths does not necessarily preclude those ropes from classification under the cordage provisions of the tariff schedules. See ORR Ruling 73-0278. In that ruling, it was held that manila rope hanks, each with a spliced-eye end and cut in 50- and 100-foot lengths, were classifiable as cordage rather than as articles of textile materials, not specially provided for.

The addition of eye splices to long lengths of cordage does not dedicate those lengths to a sole specific use as towing ropes or barge lines. The character of these articles is not fixed with certainty by the mere addition of eye splices. When long lengths of cordage are imported in a condition where dedication to other uses is probable, the addition of the eye splice is a de minimis act which cannot serve to make them articles rather than cordage.

Accordingly, the polypropylene and nylon twisted ropes are classifiable as cordage: of man-made fibers: measuring 3/16 inch or over in diameter, under the provisions of item 316.58, TSUS,

N4

085110

dutiable at the rate of 12.5¢ per pound plus 15 percent ad valorem. It should be noted that cordage which is the product of Korea and classifiable under this item number is subject to quota restrictions under Category 605.

The commercial designation "in the piece" normally refers to bolts of fabric in material lengths that have not been cut to size for a particular use. See Headquarters Ruling Letter dated April 2, 1979 (060328). The subject braids are imported in minimum lengths of 200 feet. As with cordage, the addition of eye splices does not dedicate those lengths to a specific use as towing ropes. The option to cut for other uses still remains.

Accordingly, the polypropylene and nylon braids, if constructed with a nonelastic core, would be classifiable as braids not suitable to making or ornamenting headwear: tubular braids with a nonelastic core, under item 348.00, TSUS, dutiable at the rate of 8.5 percent ad valorem. If construction with a nonelastic core is not in evidence, the polypropylene and nylon braids would be classifiable as braids not suitable for making or ornamenting headwear: other, under item 348.05, TSUS, dutiable at the rate of 10.5 percent ad valorem. It should be noted that braid which is the product of Korea and classifiable under either of these item numbers is subject to quota restrictions under Category 669.

Sincerely,

John T. Rock

Harvey B. Fox

REFER TO

VES-13-13-[illegible]
[illegible]

Regional Commissioner of Customs
Baltimore, Maryland 21202

Dear Sir:

This is in reply to your memorandum dated February 22, 1978 (VES-13-12-[illegible]) transmitting a request from [redacted], filed under section 4.14(b), Customs Regulations, in connection with foreign repairs to the [redacted] declared under title 19, United States Code, section 1466 on Norfolk entry No. 11[illegible] dated August 24, 1977. Even though the request for relief was not filed within the time limits prescribed by section 4.14 of the Customs Regulations, we have decided to consider the request on the merits of the evidence submitted.

The statement of the master and the vessel's log show that the hull of the [redacted] was damaged by drifting barges during a period of adverse weather conditions on June 27, 1977. Accordingly, duty on the cost of repairs to the hull is remitted because such repairs resulted from a casualty and were necessary to secure the seaworthiness of the vessel to enable her to reach her port of destination.

The record shows that the damage to the crane resulted from negligent use of the crane by a longshoreman on July 13, 1977. While the repairs to the crane appear to have resulted from casualty, such repairs were not necessary to secure the seaworthiness of the vessel to enable her to reach her port of destination. We are aware of the ruling in C.I.L. 400/47 concerning safety and seaworthiness of the vessel. However, the ruling in that case was based on a court case involving seaworthiness of a vessel as related to an injury claim by a seaman. We believe that title 19, United States Code, section 1466(a)(1) is explicit in its language that the repairs must be necessary to enable the vessel to reach her port of destination as well as to secure the seaworthiness of the vessel. Since the repairs to the crane do not meet the above criteria, duty on the cost of repairs to the crane is not remitted.

U.S. CUSTOMS SERVICE

WASHINGTON

OCT 18 1984

REFER TO

VES-13-18 CO:R:CD:C
106993 JM

This ruling concerns a petition for relief from the duty incurred under 19 U.S.C. 1466 on the cost of foreign repairs to an American-flag vessel.

ISSUE:

1. Whether a petition for remission of duty on foreign repairs filed pursuant to 19 U.S.C. 1466(d) is subject to the time constraints imposed by 19 U.S.C. 1514, the statute concerning protests.

2. Whether certain repairs to the vessel were necessitated by stress of weather or other casualty while the vessel was in the regular course of her voyage, thus making duty thereon remissible under 19 U.S.C. 1466(d)(1).

FACTS:

The subject vessel arrived in the United States at Newport News, Virginia, on December 27, 1981, from Jeddah, Saudi Arabia. Vessel Repair Entry 82-201635-3 was filed showing that repairs were made to the vessel's hull, radar and other equipment in foreign countries. In a petition dated March 25, 1982, the petition requested relief from duty on temporary repairs to the vessel's hull in Singapore which are covered by [redacted] Invoice No. 10272 in the amount of SD 119,752 which converts to $56,486.27 in United States currency.

On September 30, 1983, the vessel repair entry was liquidated and a bill was issued in the amount of $33,133.28 which covered all repairs to the vessel including those to the vessel's hull. The petitioner filed a protest which was erroneously mailed to the Regional Commissioner of Customs, New York Region. By a form letter dated December 15, 1983, Customs returned the protest to the petitioner with instructions that the protest should be filed at Newport News. The protest, which was mailed to the District Director of Customs at Norfolk and received on January 6, 1984, was denied as untimely filed in that it was received more than 90 days after liquidation of the entry.

A9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The record shows that while entering the harbor at Keelung, Taiwan, on November 5, 1981, the vessel struck a submerged object causing damage to the vessel's bow and subsequent flooding of the forepeak tank. An American Bureau of Shipping (ABS) surveyor examined the bow damage, allowed the vessel to proceed and recommended the damage be further examined at the next calling port, Kaochsiung, Taiwan. Since repair facilities were unavailable at Kaohsiung, an ABS surveyor examined the vessel and recommended the damage be repaired at the next port of Hong Kong. Because of pressing cargo commitment and unavailability of repair facility, the ABS surveyor at Hong Kong recommended the damage be repaired at Singapore. In support of its claim that the repairs were necessitated by casualty, the petitioner has submitted extracts of the vessel's deck log, statements of the vessel's Master and Chief Officer, photographs, ABS Survey reports and other documents. The petitioner has also submitted documents to show that repairs to the bow in Singapore were of a temporary nature and that additional repairs to the vessel's bow were effected after the vessel's return to the United States.

106993

LAW AND ANALYSIS:

Title 19, United States Code, section 1466, provides in pertinent part for an ad valorem duty of 50 percent of the cost of foreign repairs to a vessel documented under the laws of the United States to engage in the foreign or coastwise trade. Subsection 1466(d)(1) provides that the Secretary of the Treasury is authorized to remit or refund such duties if the owner or master furnishes good and sufficient evidence that the vessel was compelled by stress of weather or other casualty to put into such foreign port to make repairs to secure the safety and seaworthiness of the vessel to enable her to reach her port of destination.

Title 19, United States Code, section 1514, states in pertinent part that decisions concerning "classification and rate and amount of duties chargeable" shall become final and conclusive upon all persons unless a protest is filed within 90 days of the notice of liquidation or reliquidation. Accordingly, the liquidator's decision that the costs of repairs are subject to duty under 19 U.S.C. 1466(a) is final and the entry can not be reliquidated.

A10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

Petitioner's protest, which is being treated as a petition for relief, does not deny that the repairs to the vessel are subject to duty under 19 U.S.C. 1466(a). Petitioner is seeking remission of duty under 19 U.S.C. 1466(d)(1), based on the claim that repairs to the vessel's bow were necessitated by stress of weather or other casualty while the vessel was in the regular course of her voyage.

Prior to the amendment of section 4.14, Customs Regulations, by T.D. 80-237, the last sentence of section 4.14(e) stated, "Inasmuch as an unprotested liquidation insofar as it relates to the classification of items under section 466(a) of the Tariff Act of 1930, as amended, is final at the expiration of 90 days, a subsequent application in regard to such classification cannot be considered in the absence of a timely protest." The clear implication in section 4.14(e) was that an application for remission (as opposed to a classification relief application) is not subject to the time contraints of 19 U.S.C. 1514.

While the last sentence of former section 4.14(e) was omitted from the amendment, its content was incorporated into two new sections (sections 4.14(f) and 4.14(d)(1)(v)). Section 4.14(d)(1)(v), Customs Regulations, provides in part that reliquidation is not required if a decision involves remission of duty as provided by 19 U.S.C. 1466(d)(1) because the repairs were necessitated by stress of weather or other casualty during the regular course of the vessel's voyage. Accordingly, the relief provided by 19 U.S.C. 1466(d)(2) is still available beyond the 90 day period following liquidation. This is in agreement with a decision of the U.S. Court of Customs and Patent Appeals in the case of Farrell Lines, Inc. v. U.S., 657 F. 2d 1214 (1981).

The record before this office shows that the protest was filed and returned to the petitioner by Customs at New York within the 90 day period following liquidation. We believe that the petitioner exercised due care in seeking relief and all information submitted by the petitioner is being considered as a petition for relief.

Documents furnished by the petitioner show that the vessel's bow was damaged by striking a submerged object at Keelung, Taiwan, and that repairs to the vessel's bow at Singapore were necessary to secure the safety and seaworthiness of the vessel to enable her to reach her port of destination in the United States. Accordingly, duty on the cost of repairs to the vessel's bow are subject to remission under the provisions of 19 U.S.C. 1466(d)(1).

A11

106993

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

HOLDINGS:

1. A petition for remission of duty on foreign repairs filed pursuant to 19 U.S.C. 1466(d) is not subject to the time constraints imposed by 19 U.S.C. 1514. Since it appears that the petitioner in the subject case used reasonable care in seeking relief, the petition will be considered despite the fact it was not filed timely at Norfolk or Newport News.

2. The petitioner has submitted good and sufficient evidence that repairs to the vessels's bow were necessitated by stress of weather or other casualty. Accordingly, duty in the amount of $28,243.38 on the cost of repairs covered by Invoice No. 10272 is remitted.

REURTEL FEBRUARY 28, 1985 (OUR REF: VES-3/VES-10-03 CO:R:CD:C 107439 PH), CONCERNING TRANSPORTATION U.S.-FLAG DRILLING RIG PENROD 96 BY BAHAMIAN-FLAG SEMI-SUBMERSIBLE HEAVY-LIFT VESSEL M/V DAN MOVER FROM LONG BEACH, CALIFORNIA, TO OFFSHORE POSITION IN INTERNATIONAL WATERS IN GULF OF MEXICO.

YOU STATE CONTRACT WAS SIGNED, ON BASIS OF CUSTOMS LAWS, REGULATIONS, AND RULINGS AS KNOWN AT TIME, FOR TRANSPORTATION ON JANUARY 8, 1985. RIG WAS TOWED BY U.S.-FLAG TUG TO LONG BEACH AND ON JANUARY 26 WAS LOADED ON MOV DAN MOVER WHICH SAILED ON JANUARY 27. M/V DAN MOVER IS PROCEEDING AROUND CAPE HORN AND WILL BUNKER AT MONTIVIDEO, URUGUAY, BEFORE ARRIVING AT POINT IN INTERNATIONAL WATERS SOUTH OF HOUMA, LOUISIANA, WHERE RIG WILL BE UNLOADED. PRSENTLY, RIG OWNER DOES NOT INTEND TO DRILL OR ENTER U.S. WATERS.

TO:

YOU STATE YOU ARE CONCERNED M/V DAN MOVER COULD BE HELD IN VIOLATION OF COASTWISE LAWS IF RIG IS TOWED ONWARD TO ANOTHER COASTWISE POINT FROM POINT SOUTH OF HOUMA, UNDER C.S.D. 85-9. BECAUSE CONTRACT WAS SIGNED AND VESSEL LOADED AND SAILED PRIOR TO PUBLICATION OF C.S.D. 85-9, YOU REQUEST ONE-TIME EXCEPTION TO PROTECT M/V DAN MOVER FROM PENALTIES UNDER 46 U.S.C. 883 IF RIG IS ATTACHED AND DRILLS AT COASTWISE POINT OR ENTERS COASTWISE WATERS AT FUTURE TIME.

C.S.D. 85-9, PUBLISHED IN CUSTOMS BULLETIN, VOLUME 19, NUMBER 5, JANUARY 30, 1985, MODIFIED EARLIER RULINGS "SO THAT THE MOVEMENT OF A VESSEL ON ANOTHER VESSEL FROM A COASTWISE POINT TO A FOREIGN POINT OR A POINT ON THE HIGH SEAS WHERE THE VESSEL IS REMOVED FROM THE CARRYING VESSEL AND THEN TOWED ONWARD TO ANOTHER COASTWISE POINT IS CONSIDERED COASTWISE TRADE; THE CARRYING VESSEL IN THIS KIND OF MOVEMENT MUST BE COASTWISE-QUALIFIED.

UNDER SECTION 177.9(C), CUSTOMS REGULATIONS, NO PERSON OTHER THAN PERSON TO WHOM RULING LETTER IS ADDRESSED SHOULD RELY ON RULING LETTER. UNDER SECTION 177.10(E), CUSTOMS REGULATIONS, EXCEPT AS OTHERWISE PROVIDED IN RULING ITSELF, ALL RULINGS PUBLISHED UNDER PART 177 SHALL BE APPLIED IMMEDIATELY.

TO:

IN THIS CASE, CONTRACT WAS SIGNED AND VESSEL DEPARTED LONG BEACH BEFORE PUBLICATION OF C.S.D. 85-9 AND, THUS, BEFORE C.S.D. WENT INTO EFFECT. ACCORDINGLY, MOVEMENT OF DRILLING RIG PENROD 96 ONWARD FROM DISCHARGE POINT SOUTH OF HOUMA, LOUISIANA, WILL NOT VIOLATE COASTWISE LAWS BY REASON OF C.S.D. 85-9. OF COURSE, MOVEMENT OF DRILLING RIG WHICH WOULD OTHERWISE VIOLATE COASTWISE LAWS IS NOT EXCUSED.

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: 19 NOV 1985

FILE: VES-5-18-CO:R:CD:C
107842 PH

TO : DARC, Inspection and Control
New Orleans, Louisiana

FROM : Director, Carriers, Drawback and Bonds Division

SUBJECT: Entry and Clearance of Vessels - Treasury Decision 85-91

With your memorandum of August 1, 1985 (VES-5-V:O:IC JHG), you forwarded a memorandum dated July 24, 1985, from the Port Director at Pascagoula, Mississippi, concerning Treasury Decision 85-91. The Port Director states that he is concerned with the possible changes Treasury Decision 85-91 may effect to the Customs treatment of service vessels and helicopters which transport merchandise and passengers to and from very large crude carriers (VLCC's) outside United States territorial waters. He states that he assumes that service craft bringing merchandise from VLCC's which requires Customs entry would be subject to the vessel entrance and clearance requirements by virtue of the amendments to the Customs Regulations effected by the Treasury Decision. He states that this would pose additional burdens on the service vessel operators but would greatly enhance Customs control of transportation of passengers and merchandise to and from VLCC's. On the negative side of the ledger, he states that the changes would increase the volume of documents and time involved in processing these vessels, some of which perform two or more trips per day to and from VLCC's.

The Port Director also asks about the effect of Treasury Decision 85-91 in the context of Customs Service Decision 85-37. This C.S.D. held, pursuant to 19 U.S.C. 1565 and regulations thereunder, that bonded merchandise to be moved from one place within a port to another must be transported by a Customs licensed and bonded cartman or lighterman. The C.S.D. held that launch service operators, if performing these services, must be licensed and bonded as lightermen. Finally, the Port Director asks about the effect of Treasury Decision 85-91 on offshore drilling operations.

Treasury Decision 85-91 amended sections 4.3, 4.9, 4.20, and 4.60, Customs Regulations (19 CFR 4.3, 4.9, 4.20, and 4.60), to require a vessel to obtain clearance if it is bound for another vessel on the high seas to either: (1) transship export merchandise which it has transported from the United States to that vessel; or (2) receive import merchandise from that vessel and

B2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

transport the merchandise to the United States. A vessel is required to make vessel entry if it is returning from another vessel on the high seas after either: (1) transporting export merchandise out of the United States and transshipping the merchandise to that vessel; or (2) transporting import merchandise to the United States after receiving the merchandise from that vessel. Treasury Decision 85-91, as stated therein, was issued to clarify the applicability of the entrance and clearance requirements of the navigation laws to vessels engaged in the lightering of import and export cargo between the United States and vessels located on the high seas.

The Port Director is correct in his assumption that service vessels bringing import merchandise from a vessel on the high seas to a port of the United States would be subject to vessel entrance and clearance requirements. This is also true of service vessels carrying export merchandise from a port of the United States to a vessel on the high seas. Treasury Decision 85-91 does not affect the Customs treatment of helicopters transporting merchandise and/or passengers to and from vessels on the high seas. Customs treatment of helicopters and other aircraft is, of course, governed by Part 6 of the Customs Regulations under which aircraft coming into any area from any place outside the United States (e.g., a vessel on the high seas) shall be entered in such area if landing is made therein and if carrying passengers for hire or commercial cargo (section 6.3, Customs Regulations). Also, the Treasury Decision affects only vessels transporting export or import merchandise or cargo between the United States and a vessel on the high seas, it does not affect such transportation of passengers.

Operators of service vessels which transport merchandise or cargo between the United States and a vessel on the high seas are <u>not</u> required to be licensed and bonded as lightermen. Customs Service Decision 85-37 was only concerned with the movement by service vessels of bonded merchandise between places <u>within</u> a port (see definition of "cartman" and "lighterman" in section 112.1(b) and (f), referred to in the C.S.D.). A vessel on the high seas is, of course, not within a port.

We anticipate that Treasury Decision 85-91 will have little, if any, effect on drilling operations on the United States outer continental shelf (OCS). Drilling vessels or platforms, artificial islands, and other devices or installations which are attached to the seabed of the OCS for the purpose of exploring for, developing, or producing resources therefrom are treated as if they were located within the United States for purposes of United States law (section 4(a)(1), Outer Continental Shelf Lands Act of 1953, as amended (43 U.S.C. 1333(a)(1))). Customs and navigation laws, including the coastwise laws, laws on entrance

B3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

and clearance of vessels, and provisions of dutiability of merchandise are applicable to such vessels, islands, and devices or installations (see Treasury Decision 54281, and subsequent rulings on this subject published in the Customs Bulletin as Customs Service Decisions).

Because a drilling vessel, artificial island, or other device or installation attached to the OCS for any of the requisite purposes is treated as if it were a point within the United States, a service vessel carrying merchandise or passengers between the United States mainland and such a vessel, island, or device or installation should be treated as though it is carrying merchandise between points in the United States. Such transportation, or transportation between drilling vessels, artificial islands, or other devices or installations attached to the OCS for any of the requisite purposes, is limited to coastwise-qualified vessels (i.e., United States-built, owned, and properly documented vessels). Imported merchandise transported from a drilling vessel, artificial island, or other device or installation attached to the OCS for any of the requisite purposes to a point in the United States or another such drilling vessel, artificial island, or other device or installation attached to the OCS has already been subject to entry and duty under the Tariff Schedules and is not treated as import cargo. Merchandise sent foreign from a drilling vessel, artificial island, or other device or installation attached to the OCS for any of the requisite purposes is, of course, treated as export cargo.

We appreciate your effort, and that of the Port Director, in considering this matter and in raising these very appropriate questions about it. Enclosed, for your information, are copies of a recent memorandum and letter also considering the effects of Treasury Decision 85-91.

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

SEP 19 1985

REFER TO
VES-3-03-CO:R:CD:C
107844 DHR

Mr. John E. Bouchard
General Manager
Moller Steamship Company, Inc.
1667 K Street, NW.
Washington, D.C. 20036

Dear Mr. Bouchard:

Reference is made to your letter of August 9, 1985, concerning the applicability of the Sixth Proviso of the Jones Act (46 U.S.C. 883) and section 4.93, Customs Regulations (19 CFR 4.93), to certain merchandise transported between points in the United States.

Under the Sixth Proviso and section 4.93, foreign-flag vessels of certain nations and United States-flag vessels not qualified to engage in the coastwise trade may transport empty cargo vans, empty lift vans, and empty shipping tanks and equipment for use with cargo vans, lift vans, or shipping tanks between points embraced within the coastwise laws of the United States if those articles are owned or leased by the owner or operator of the transporting vessel and are transported for his use in handling his cargo in foreign trade. In accordance with section 4.93(c), Customs Regulations, the articles must be identified on any Cargo Declaration, Customs Form 1302, required to be filed under part 4 of the Customs Regulations (19 CFR part 4). Section 4.93(c) also requires that such a Cargo Declaration include a statement that the articles are owned or leased by the owner or operator of the transporting vessel and are transported for his use in handling his cargo in foreign trade.

You ask whether replacement tires and repair parts can be considered "equipment for use with" cargo vans, lift vans, or shipping tanks, as that phrase is used in the Sixth Proviso and section 4.93. You state that because of contrary Customs rulings, you and other vessel operators have been forced to transport your own replacement tires and repair parts for containers between points in the United States by trucks or rail at a significant expense even though your own vessels are moving between those points. The Honorable Mario Biaggi, Chairman, House Subcommittee on Merchant Marine, has also written us concerning this matter.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B5

After a complete review of this matter, we have concluded that the phrase "equipment for use with" cargo vans, lift vans, or shipping tanks in the Sixth Proviso of the Jones Act and in section 4.93, Customs Regulations, includes replacement tires and parts for cargo vans, lift vans, or shipping tanks, provided that the tires and parts are owned by the owner or operator of the transporting vessel, are intended for cargo vans, lift vans, or shipping tanks owned or leased by the owner or operator of the transporting vessel, and are transported for his use in handling his cargo in foreign trade. The requirements of section 4.93(c), Customs Regulations, regarding any required Cargo Declaration, Customs Form 1302, are applicable to replacement tires and parts for cargo vans, lift vans, or shipping tanks being transported coastwise.

If replacement tires or parts for cargo vans, lift vans, or shipping tanks are transported between coastwise points on foreign-flag vessels of nations not granted reciprocal privileges under the sixth proviso (see list in section 4.93(b)(1), Customs Regulations) or, even if transported by qualifying vessels, are not owned or leased by the owner or operator of the transporting vessel and transported for his use in handling his cargo in foreign trade, severe liabilities will be incurred under 46 U.S.C. 883. If the requirements of section 4.93(c), Customs Regulations (see also section 4.81(e), Customs Regulations), relating to any required Cargo Declaration, Customs Form 1302, are violated, penalties will be assessed under 19 U.S.C. 1584.

Sincerely,

Edward B. Gable, Jr.
Director, Carriers, Drawback
and Bonds Division

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

22 OCT 1985

REFER TO
VES-3-15/VES-5/VES-13
CO:R:CD:C 107852 PH

John W. McConnell, Jr., Esq.
Haight, Gardner, Poor & Havens
Federal Bar Building
1815 H Street, NW., Suite 501
Washington, D.C. 20006

Dear Mr. McConnell:

In your letter of August 14, 1985, you state that recently a client brought a semi-submersible drilling rig from Alaska by way of Peru to a location in the Gulf of Mexico where it was attached to the seabed of the outer continental shelf (OCS) for the purpose of exploring for resources. The owner of the drilling rig sought to make formal entry with the local Customs office but entry was refused on the basis of Legal Determination 3100-02 and a Notice to Steamship Companies/Brokers and Others Concerned issued by the District Director of Customs in New Orleans on September 20, 1984 (84-140 VES-5-07:V:NO:DD TEH).

On the basis of the 1978 Amendments to the Outer Continental Shelf Lands Act of 1953 (OCSLA), you state that you believe that entry should be made and seek a ruling as to when such entry should be made. You state that you believe that equipment purchased for and repairs made to the vessel outside the United States should be subject to duty.

The 1978 amendments to the OCSLA, among other things, changed section 4(1)(a) of the OCSLA (43 U.S.C. 1333(a)(1)) to provide, in part, that the laws of the United States are extended to " ... the subsoil and seabed of the outer Continental Shelf and to all artificial islands, and all installations and other devices permanently or temporarily attached to the seabed, which may be erected thereon for the purpose of exploring for, developing, or producing resources therefrom ... to the same extent as if the outer Continental Shelf were an area of exclusive Federal jurisdiction located within a State." Before the 1978 amendments, the corresponding part of section 4(a)(1) provided that the laws of the United States are extended to "... the subsoil and seabed of the outer Continental Shelf and to all artificial islands and fixed structures which may be erected thereon for the purpose of exploring for, developing, removing, and transporting resources therefrom, to the same extent as if the outer Continental Shelf were an area of exclusive Federal jurisdiction located within a State."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B7

The intent of this change was stated to be "technical and perfecting and ... meant to restate and clarify and not change existing laws." (House Conf. Report No. 95-1474, p. 80 (1978 U.S.C.C.A.N. 1679)). It was also stated in this Report about this change that the conferees were informed--

> that the U.S. Customs Service has interpreted existing section 4(a)(1) to mean that foreign-built production platforms are not subject to import duties when they are brought into OCS waters and attached to the seabed. Specifically, the Customs Service has stated that such platforms are not actually being imported to the United States until they are placed on the shelf and need not pay customs duties. 1 The conferees reject this interpretation and believe it is contrary to the intent of Congress in enacting the 1953 act. Moreover, to make it explicit that this interpretation should not be continued to be given effect, the conferees state that one of the purposes of this change in 4(a)(1) is to make it clear that U.S. customs duties are to apply to a platform, built overseas, and brought into OCS waters for placement so that it can be used to develop and produce OCS minerals.
>
> Under section 4(a)(1) of the conference report, Federal laws and "civil and political jurisdiction of the United States" are applicable to the subsoil and seabed of the OCS, to all artificial islands and "all installations and other devices permanently or temporarily attached to the seabed, which may be erected thereon" to explore, develop, produce or transport OCS mineral resources. Thus customs laws apply - as within the "political and civil jurisdiction" of the United States - to platforms constructed outside the United States and brought into OCS waters - as being "installations and other devices * * * which may be erected thereon".
>
> 1 The Customs Service indicates that once the platforms are in place, machinery, equipment and other items placed on the structure are subject to duties. Of course, the conferees believe this is, and continues to be, the law. [Supra, pp. 80, 81.]

In response to the foregoing legislative history, the Customs Service issued Customs Service Decision (C.S.D.) 79-1. This decision held that foreign-built drilling and production platforms which are not vessels are dutiable upon their attachment, whether temporary or permanent, to the seabed of the OCS. The C.S.D. emphasized that only drilling platforms which are not vessels are dutiable upon attachment to the OCS. It did not make vessels, whether drilling vessels or otherwise, subject to duty (vessels

B8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

other than yachts and pleasure vessels are not subject to duty under the Tariff Schedules (General Headnote 5(g), Tariff Schedules of the United States)), nor did it make them subject to vessel entrance and clearance requirements upon initial attachment to the OCS at a point at which there is no existing artificial island or installation or other device attached to the seabed for the purpose of exploring for, developing, or producing resources therefrom.

It was the position of the Customs Service before the 1978 Amendments and remains the position of the Customs Service that drilling vessels are not subject to the vessel entrance and clearance requirements at the time they initially "attach" to the OCS, as stated in the note you referred to in the September 20, 1984, Notice from the District Director of Customs in New Orleans. Accordingly, we concur with the decision of Customs in New Orleans in declining to accept formal entry of your client's drilling rig on its initial attachment to the OCS.

Under 19 U.S.C. 1466, equipments purchased in a foreign country for, and repairs made in a foreign country to a vessel documented under the laws of the United States to engage in the foreign or coasting trade or intended to be employed in such trade are dutiable "on the first arrival of such vessel in any port of the United States." In view of the specific language in section 1466 attaching duties on the first arrival in any port of the United States, we conclude that drilling vessels are not subject to vessel repair duties on their initial attachment to the OCS at a point at which there is no existing artificial island or installation or other device attached to the seabed for the purpose of exploring for, developing, or producing resources therefrom.

Sincerely,

Edward B. Gable

NOV 11 1977

DRA-1-R:CD:D S
208296

Regional Commissioner of Customs
New Orleans, LA 70112

Reference: Internal Advice dated October 14, 1977; time limit for filing drawback claims.

Dear Sir:

You asked whether the date of exportation is counted in measuring the time within which a claimant must file for drawback.

A claimant filed a drawback entry under 19 U.S.C. 1313(g) on September 29, 1976, covering the exportation of two drilling rigs on September 29, 1973.

Section 22.13(a) of the Customs Regulations provides in relevant part that "a drawback entry and certificate of manufacture shall be filed within 3 years after the date the articles are exported."

When a time limitation is expressed in terms of a time period after or from a certain date, the initial date itself is not included in the computation. See, e.g. U.S. v. Hurlburt, 11 Ct. of Cust. App. 24., T.D. 38638 (1921); Madden Machine Co. v. U.S., 61 C.C.P.A. 97, 499 F. 2d 1294 (1974).

Accordingly, the drawback entry filed on September 29, 1976, was filed on the last day of the three year filing period. Assuming that all other time limitations have been met, the claim is timely.

Sincerely yours,

George C. Stewart
J.P. Tebeau
Director
Carriers, Drawback and Bonds Division

FEB 20

DRA-1-RRUCDB SMC
211336

Dear

This is in reference to your letter dated January 15, 1980. You state that in June of 1978, you paid duty ($37.50) through your customs broker, on the shipment of a glass ornament which was found to be damaged when opeded. Consequently, after negotiating with your shipper in Italy, a replacement shipment was sent and entered the United States in September 1979. This shipment was also cleared by and duty ($45.48) was again paid. You now request a refund of the duties paid on the second shipment.

Section 1313(c), title 19, United States Code, provides that merchandise not conforming to sample or specifications may, within 90 days after release from Customs custody be returned to Customs custody and upon exportation duties paid less 1 per centum shall be refunded as drawback.

Sections 22.31-22.35 of the Customs Regulations (copy enclosed) outline the necessary requirements for an importer to follow to obtain a refund of duties paid for rejected merchandise under 19 U.S.C. 1313(c). These requirements include a timely return of the merchandise to Customs custody for examination and exportation. The facts you have presented indicate that these requisites were not met after you received the first shipment. It should also be noted that drawback under section 1313(c) would not be applicable on the replacement shipment because it was not rejected merchandise.

We wish to advise you to contact the district director of Customs of the port where the entries were made, as it is within his authority to authorize drawback under section 1313(c). The address of the District Director in San Francisco is 555 Battery Street, P.O. Box 2450, San Francisco, California, 94126.

Sincerely yours,

S/ Steuart

Dear Sir:

Re: Decision on Application for Further Review of Protest Nos. 4105-2-000001 and 4105-1-000003

The above captioned protests and applications for further review were filed against demands for payment of certain charges for Customs supervision at the Toledo Foreign-Trade Zone, billed on a total of 11 invoices dated from July 21, 1981, through December 22, 1981. Our decision follows:

ISSUE:

The basic issue raised is whether charges for additional Customs services required at a foreign-trade zone (FTZ) are chargeable to the operator of the FTZ when those services are performed outside of the precincts and limits of the FTZ.

FACTS:

The Protestants are the grantee of a FTZ and the former operator of the FTZ. The bills, or more accurately, portions of bills protested, relate to services provided by Customs with respect to a tenant of the FTZ but which were performed subsequent to termination of the tenant's tenancy at the FTZ and apparently subsequent to the time protestant FTZ operator stopped operating the FTZ and was succeeded by another firm as operator.

The sequence of events, as set out by the Protestants, is as follows. For a period of years ending in October 1980, a company was a tenant in a FTZ, and maintained a sizeable inventory of merchandise in the FTZ. The Protestant former operator of the FTZ was the operator of the FTZ during the tenancy of that company.

At some time in or prior to March 1978, it is stated, Customs officers apparently became concerned with the integrity of the inventory of the above company's merchandise at the FTZ and began an investigation, the nature and scope of which is unknown to the Protestants. The method of investigation included comparison of inventory records of the company's mechandise "lots" with subsequent inventories of the same "lots." As a result of the investigation, Customs commenced to issue a series of claims for liquidated damages for duty due on

B12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

merchandise said to have been found missing from each lot. These claims were addressed to Protestant FTZ grantee, and although not so stated, apparently were against the grantee's foreign-trade zone bond.

The FTZ bond is voluntarily tendered and is conditioned upon the removal of FTZ guards for other than the FTZ's normal business hours and guarantees the payment of all duties and taxes on such merchandise as may be removed from the FTZ without a proper Customs permit or otherwise be missing from the FTZ.

The claims were forwarded by the grantee to the operator and by the operator to the tenant company. The tenant company has contested the claims, taking the position that none of its merchandise was in fact missing.

In any event, investigation of the tenant by Customs is said to have resulted in a substantial increase in Customs charges for services at the FTZ, which were periodically billed to the grantee. During the tenure of the tenant at the FTZ, these charges were paid to Customs by the FTZ operator, who was in turn reimbursed by the tenant for that portion of the charges attributable to the tenant. The amount of the charge to the tenant was based upon rate and hour information furnished to the FTZ operator by Customs.

In October of 1980, the tenant discontinued its operation in the FTZ and removed its goods from the FTZ. It appears that prior to its departure from the FTZ, the tenant asked Customs to take all necessary steps to expedite the removal of their inventory from the FTZ. It further appears that in order to expedite the removal of the merchandise from the FTZ, Customs agreed that, when feasible, the paperwork necessary to accomplish the lot reconciliation typically performed at the time of constructive transfer would be performed after the removal of the merchandise, and therefore after departure of the tenant from the FTZ.

It is at this point in the sequence of events that the facts fail us. The Protestants deny ever making any such agreement with Customs and that Customs has been unresponsive to its inquiries concerning with whom Customs did make the agreement. Customs, on the other hand, has acknowledged that there is no record of the agreement but submits that all parties at the time, including the Protestants, were aware that extensive inventory discrepencies existed with the tenant's merchandise.

B13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Following the tenant's departure and removal of its goods from the FTZ, Customs continued to issue demands for liquidated damages for goods of the former tenant said to be missing from the FTZ and to bill the FTZ operator for zone services which included substantial sums in respect to the former tenant's affairs. These billings are said to commence with an invoice dated May 19, 1981, although the first invoice which is the subject of these protests is dated July 21, 1981.

In the meantime, the Protestant former FTZ operator had terminated its operations at the FTZ and been succeeded by another firm as FTZ operator; it continues, however, to be responsible to the FTZ grantee for Customs charges arising out of the tenant's tenure.

Initially, Protestants attempted to handle the Customs charges for zone services attributed to the tenant by paying Customs and seeking reimbursement from the former tenant. However, the former tenant refused to pay, claiming the charges were not proper.

All charges billed have been paid and Protestants now claim a refund of $15,070.71, said to be that portion of the charges for zone Customs services attributable to the former tenant after that tenant's departure from the FTZ. However, the charges, the subject of the protests, appear to total $12,639.87.

LAW AND ANALYSIS:

In our opinion, the question to be decided is one of fact, not of law. Protestants claim that Customs' concurrence in removal of the tenant's goods was obtained without their knowledge or permission. Section 146.5, Customs Regulations (19 CFR 146.5), requires the written concurrence of the grantee (or its delegate) to remove merchandise from a zone except where there is provision for the making of applications by the grantee itself or where the grantee is permitted to file specific or blanket approvals.

We find no evidence in the file of the written concurrence or blanket approval of the grantee for the removal of the goods from the zone. Neither do we find any evidence in the file that Protestants explicitly or implicity agreed to the cost of Customs zone services performed subsequent to removal of the merchandise and departure of the tenant from the zone, although certainly the Protestant zone operator, at least, knew or should

B14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

have known that the merchandise was being removed from the zone and tacitly concurred in that removal.

Nevertheless, we cannot interpret that tacit approval to constitute an unwritten agreement on the part of the Protestants to be responsible for any prospective charges involving a departed tenant and removed merchandise.

This is not to say, of course, that Protestants could not have agreed to be responsible for such charges, nor that under different circumstances the charges protested would not be proper.

Indeed, although in view of the result we have arrived at we do not believe it necessary to consider Protestant's arguments on the propriety of the charges, we would note that nothing in the statutory provisions on foreign-trade zones limits the scope of the "additional Customs services required" to on-site service. Customs has broad discretion to determine what service is required to carry out its statutory mandate, and is statutorily authorized to be reimbursed for the cost of such service by the grantee of the zone. Thus, if Customs officers are performing functions relating to protection of the revenue or to admission of foreign merchandise into Customs territory or any other function required under the statutory provisions on foreign-trade zones, Customs has authority to assess zone grantees for the cost of those services.

HOLDING:

For the foregoing reasons, you are instructed to allow Protest Nos. 4103-2-000001 and 4103-1-000003 in the amount attributable to charges for Customs services incurred in connection with the departed zone tenant subsequent to its departure from the zone. As it is not necessary to the result, we do not rule on the propriety of the disputed charges.

Sincerely,

Chief, Drawback and Bonds Branch

Withdrawals from warehouse and entireties

The following paragraphs may be included in your reply to the May 23, 1983, internal advice request from the District Director, Detroit:

The trucks are placed in a class 4 warehouse, and there is no manipulation. One withdrawal is made of the merchandise on all the trucks, comprising a complete machine. The issue is whether the withdrawal can be considered a single transaction and the machine an entirety.

As a general rule, articles are imported when they arrive within the Customs territory of the United States with intent to unlade. James G. Wiley, a/c Pasadena Firearms Co. v. U.S., C.D. 2645 (1966), and cases cited therein. Wiley holds that importation on separate aircraft arriving on the same day are not subject to the entireties doctrine. United States v. Baldt Anchor, Chain & Forge Division of Boston Metals, C.A.D. 1051 (1972), holds that articles not imported together are precluded from being classified as entireties.

Warehoused goods represent an exception to the general rule. There is a line of cases which hold that goods in bonded warehouses are not to be considered "imported" until a permit of delivery has been issued and they then enter into the commerce of the United States. Stone and Downer Co. v. U.S., T.D. 45388; Casazza & Bro. v. U.S., 125 U.S. 525 (1887); Five Percent Cases, T.D. 35503; Atlas Marine Supply Co. v. U.S., C.D. 597. See also dicta at page 351 of Franklin Industries Inc. v. U.S., 1 CIT 349.

The exception is reinforced by the cases concerning 19 U.S.C. 1562, the manipulation statute. In Marques Del Merito, Inc. v. U.S., C.A.D. 394, the court decided that in 19 U.S.C. 1562 Congress evidenced an intention to make an exception to the rule that "importation" means bringing goods within the jurisdictional limits of the United States with an intention to

216113

C2

unlade. The court states that goods become subject to duty ("imported") in their condition at the time of withdrawal from warehouse.

The lower court discussed this subject in Marques Del Merito, Inc. v. U.S., C.D. 1080; the court found that section 1562 required reclassification of merchandise if, in fact, the manipulation changed the dutiable character of the merchandise. The court said:

> By the provisions of the Tariff Act of 1930, as amended, Congress intended to change ordinary rules regarding classification of merchandise so as to make the condition upon withdrawal from the warehouse of merchandise manipulated under that section the determinant of its classification.

In Garvey v. U.S., C.D. 1726, the following portion of the Customs Regulations, section 19.11(d), was held to be invalid:

> ... but if the manipulation produces two or more parts of an article constituting an entirety, the parts shall not be classified separately if all the parts constituting the entirety are withdrawn for consumption under a single withdrawal.

The court reasoned that this was an amendment to 19 U.S.C. 1562 not intended by Congress. Customs published T.D. 54067 which deleted that portion of section 19.11(d).

The Customs court was even more explicit in Manca, Inc. v. U.S., Abs. 62666. Merchandise had been entered into a warehouse as completed microscopes; they were manipulated, dismantled and repacked and withdrawn as parts of microscopes (under two different classifications) on one warehouse withdrawal for consumption. In discussing C.D. 1726, the court said that one sentence of section 19.11(d) had been held invalid because "... in seeking to fix a classification as entireties on manipulated merchandise when it is withdrawn for consumption under a single withdrawal the said provision had the effect of imposing a limitation on the statute which was not applied by Congress. Under the stipulated facts the cited decision has equal force and effect in this case."

Both Garvey and Manca were decided prior to the promulgation of General Headnote 10(h), the entireties headnote. While Garvey holds that where manipulation under 19 U.S.C. 1562 produced two separate articles which constitute an

216113

(3

entirety they are classifiable separately whether or not withdrawn for consumption under a single withdrawal, we believe that General Headnote 10(h) would now require classification as an entirety where such a withdrawal was under a single withdrawal, but separate classification where there were separate withdrawals.

With respect to storage warehouses, 19 U.S.C. 1557 provides in part "... merchandise may be withdrawn ... at the rate of duty imposed by law upon such merchandise at the date of withdrawal." We see no requirement of law or reason to have a rule for storage warehouses that differs from that for manipulation warehouses. To do so would be to encourage importers to perform nominal and needless manipulation to obtain desired classifications.

It is our opinion that merchandise constituting an entirety withdrawn from warehouse on a single withdrawal for consumption is classifiable as an entirety regardless of whether there are one or more warehouse entries covering the articles withdrawn.

Issue: Is imported merchandise which is entered for warehouse eligible for drawback under the substitution provision of the same condition drawback law, 19 U.S.C. 1313(j)(3), if it is thereafter withdrawn from warehouse and exported?

Law and analysis: The express provisions relating to drawback under 19 U.S.C. 1313 fundamentally do not apply to imported merchandise until "after its release from the custody of the Government." (19 U.S.C. 1558(a) and (a)(1); 19 CFR 191.132(a); H. Rept. 7, 71st Cong., 161 (1929); S. Rept. 999, 96th Cong., 23 (1980); also see Atlas Fibers Co. v. United States, 30 Cust. Ct. 247, 254-255, C.D. 1528, aff'd 42 C.C.P.A. 65, C.A.D. 572). It is also acknowledged in this regard that same condition drawback, subsection (j), "would apply to (imported) articles entered, or withdrawn from warehouse, for consumption" (S. Rept. 999, supra).

In contrast to section 1313, 19 U.S.C. 1557(a) provides, in a general sense, for drawback, under certain conditions, on imported merchandise which has "remained continuously in bonded warehouse or otherwise in the custody and under the control of customs officers."

Imported merchandise entered for warehouse, and in the custody and under the control of Customs, does not, therefore, fall within the scope of section 1313, including, specifically, the provisions for same condition drawback under subsection (j).

Parenthetically, even if same condition drawback were applicable herein, the necessity that the claimant have "possession" of the substituted merchandise under section 1313(j)(3) would not be met while the merchandise remains in the warehouse subject to the control of the Government. In a recent ruling to be published in the Customs Bulletin (file DRA-1-09-CO:R:CD:D 218100, dated August 16, 1985), it is held that possession under section 1313(j)(3) "means complete control over the articles or merchandise on premises or locations where the possessor can put the articles or merchandise to any use chosen" (emphasis added).

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

DEC 27 1985

REFER TO

DRA-1-09-CO:R:CD:D
218254 JPS

Dear Mr. Battaglioli:

Thank you for your letter of December 5 expressing your reservations about a drawback protest ruling (file 218254) of October 2, 1985, specifically holding number two of that ruling, which holds that for purposes of substitution drawback (19 U.S.C. 1313(b)) a successor is allowed to designate, as the basis for drawback on articles manufactured by it after the date of succession, merchandise used by the predecessor prior to the date of succession.

The facts in that case are that the Firestone Plastics Company, an unincorporated division of Firestone Tire and Rubber Company, was sold to the Occidental Chemical Company and became part of the PVC Resins Division of Occidental. Such rights as Firestone had to claim drawback, by virtue of the manufacturing operations of the Firestone Plastics Company, were transferred to Occidental under the terms of the sales agreement, either paragraph 1.1.4 or 1.1.8.

The issue is whether, with respect to articles manufactured with use of certain merchandise and exported by the PVC Resins Division after its transfer to Occidental, Occidental may designate as the basis for drawback merchandise of the same kind and quality imported and used by the PVC Resins Division prior to its transfer, when it was still the Firestone Plastics Company.

It appears from the file that we have been distracted from resolving this issue by efforts to establish a special concept of "succession" as a requirement for transferring drawback rights from one corporation to another, and to define "succession" as a situation in which the transferor corporation must cease to exist.

There appears to be nothing in the drawback law or regulations to invalidate the transfer of a drawback claim along with the unincorporated manufacturing plant to which it belongs, as was done in this case. This is so whether the claim is a potential claim, depending on conditions not yet satisfied, or a consummated claim. The drawback law may be, and should be, applied so as to permit the transfer of drawback claims which are in various states of maturation.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C1

2 of 13 pages (218254)

In a transaction such as the one involved here, a drawback claim is like certain other assets a corporation may transfer by sale of its factory. These claims may depend, for their perfection, on some future action by the transferee corporation. For example, as a result of its business activities, a transferor corporation may have at the time of transfer firm purchase orders for goods which have not yet been delivered to customers, accounts receivable from orders which have been satisfied, and cash from accounts receivable which have been paid. These are all assets which may be transferred, even though in the case of the undelivered orders the transferee corporation must complete some undertaking commenced by the transferor corporation in order for the claim to become perfected. Without some contractual provision to the contrary, there is no legal (or rational) barrier to the transfer of an undelivered purchase order, or to allowing the transferee to complete the undertaking commenced by the transferor. To hold otherwise would either destroy an asset (transferor's undelivered orders) or force the transferor to suspend normal business activities to avoid creating an asset which, subsequent to transfer, it could not perfect as a practical matter and which the transferee could not perfect as a legal matter.

Absent a legal bar which does not appear to exist in this case, the same rationale should be applied to drawback transactions. The most important objective of the drawback law is to encourage exportation of articles manufactured in the United States. To cut off arbitrarily Occidental's right to drawback on articles manufactured by the PVC Resins Division simply because Occidental is designating articles imported and used by that same manufacturing division before it was acquired from Firestone causes the destruction of a legitimate claim and interferes with the incentive which the law is intended to create.

Moreover, there is no reason why the transferor should not be able to continue normal business operations right up to the moment of transfer, importing merchandise and using it to manufacture articles on the assumption that it is creating an asset - potential right to drawback - which it may eventually claim itself or which it may transfer, along with other assets of its manufacturing facility, to another corporation.

Enclosed is a Headquarters ruling letter dated January 14, 1957 which appears to me to be right on point and which confirms that the position taken in the October 2, 1985 letter was our policy in 1957.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C8

As a revenue-raising bureau of the Treasury Department, the Customs Service appropriately takes a strict view of laws which provide for avoidance or refund of taxes. However, where the Congress has provided for such a refund, and where the rationale of the refund law is clear, we must give way and support the spirit of that law rather then seeking sharp distinctions to avoid its effects. From this point of view, I believe that the October 2 ruling was correct and should be applied.

Sincerely,

John P. Simpson

Regional Commissioner of Customs
Chicago, Illinois 60603

Re: Further Review of Protest Number 3901-5000476 (Chicago) - Drawback Successorship - 19 U.S.C. 1313(b) - 19 CFR 191.32(a)(3)

Dear Sir:

This is in reply to the application for further review, filed on April 2, 1985, of a decision by the Regional Liquidation Branch not to allow drawback with respect to entries 84-102057-9, 84-104212-0, 84-104213-3, 84-104214-6, 84-102949-9, 84-106059-7, 84-107411-4, 84-110912-8.

ISSUES:

1. Will a corporation be approved as the successor of a division of another company, assuming all other requirements of successorship are met?

2. For purposes of substitution drawback (19 U.S.C. 1313(b)) may a successor designate as the basis for drawback on articles manufactured by it after the date of succession merchandise used by the predecessor prior to the date of succession?

3. For purposes of substitution drawback may a successor designate as the basis for drawback on articles manufactured by it prior to the date of succession merchandise used by the predecessor prior to the date of succession?

FACTS:

On July 5, 1983, Customs approved a drawback proposal of Occidental Chemical Corporation, PVC Resins Division (abstracted as T.D. 84-2-L) in which proposal Occidental Chemical claimed to be the successor to Firestone Plastics Company, a division of Firestone Tire and Rubber Company, under the latter's contract of September 16, 1980 (abstracted as T.D. 81-91-J).

Based on T.D. 84-2-L, Occidental Chemical, PVC Resins Division, filed the eight drawback entries noted above on which

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C10

4 of 13 pages (BACKGROUND TO 218254)

it received accelerated drawback. However these entries were liquidated "no drawback" and the drawback was repaid by Occidental Petroleum on eight U.S. Customs bills dated March 1, 1985. In addition Occidental protested the liquidation of the eight entries and it is this protest we now consider.

LAW AND ANALYSIS:

Occidental Chemical Corporation, PVC Resins Division, is the drawback successor of Firestone Plastics Company, a division of Firestone Tire and Rubber Company, under T.D. 84-2-L. There was precedent permitting a corporation to be successor to a division of another corporation. See for example T.D. 75-71-R.

The next issue to be considered relates to the rights of a successor under substitution drawback. Successorship as a concept was introduced into drawback at least as early as February 4, 1920. See T.D. 38286-G. When substitution drawback was enacted the concept was extended to it (T.D. 52749-N).

The following excerpts are from a Memorandum of June 14, 1963, concerning Headquarters views (at that time) with regard to the passage of drawback rights under successorship.

> When one corporation succeeds another, for drawback purposes the successor takes over whatever drawback rights were held by the predecessor. In the case of operations under 313(a), the form of the drawback right is clearly defined in that it is either in imported merchandise which on the date of succession has not been used by the predecessor, or it is in an article manufactured by the predecessor with the use of imported merchandise. There is no question that if the successor in either case completes the necessary steps under the drawback procedure, he can recover the duties paid on the imported merchandise. In fact then the drawback right does pass from the predecessor to the successor in 313(a) cases.
>
> In the case of operations under section 313(b), the drawback right is less clearly defined, but it is nonetheless present in imported merchandise. In this regard, the Customs Court in the case of General Motors Corporation v. United States, C.D. 1587, which involved operations under section 313(b), stated at page 97:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C11

5 of 13 pages (BACKGROUND TO 218254)

> Ordinarily, when merchandise is imported as to which the drawback statute may become applicable, an inchoate right, or a "right accruing," arises, and as the merchandise progresses by way of manufacture or production in the United States, use in certain ways, etc., the inchoate or accruing right ripens, until upon exportation of the merchandise or article in accordance with the statute and regulations pertaining thereto, the inchoate or accruing right becomes an absolute right to receive payment, as drawback, of the amounts specified by the statute.

If the drawback right in imported merchandise passes to a successor corporation in the case of operations under section 313(a), it must also pass to the successor in operations under section 313(b), unless such passage is prohibited by the drawback law or regulations. I can find no such prohibition in either section 313(b) of the Tariff Act of 1930, or Part 22 of the Customs Regulations. Pursuing this one step further, if a manufacturer who operates under section 313(b) receives imported merchandise but, before using such merchandise, is succeeded by another corporation, the successor clearly can use the imported merchandise and subsequently designate it as the basis for drawback. If on the other hand, the predecessor used the imported merchandise before the date of succession, there can be no question that the predecessor had a right to designate such merchandise. This right too must pass to the successor for otherwise it is a fallacy to say that a successor takes over the drawback rights held by the predecessor.

The "right to designate" having passed to the successor, the question then arises as to what exportations the imported merchandise covered by the right may be designated against. The predecessor had the right to designate the merchandise against articles manufactured by it after the date of receipt of the imported merchandise. In effect, the date of receipt of the imported merchandise was the date on which the "right to designate" was created, and the predecessor held such right until the date of succession. When the right is transferred by succession, the successor stands in the place of the initial holder of the right and therefore would be able to designate the merchandise

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C12

6 of 13 pages (BACKGROUND TO 218254)

covered by the right aganist articles manufactured by it (the successor) on and after the date on which the right first inured to the successor that is, the date of succession.

There follows an excerpt from the sample format for a successorship statement which was furnished by Customs for preparation of the successorship statement from as early as 1954 until 1979 when it was eliminated for reasons unrelated to the successorship question.

> On (date), the (Old Corporation), was succeeded by (New Corporation), and on the said date (or on (date)) the said (New Corporation) became entitled to all of the drawback rights accrued and accruing to the (Old Corporation) by virtue of the provisions of T.D. .

This format was furnished until the regulations were amended (T.D.79-65) to eliminate supplemental statements (including successorship) in favor of revised statements to modify existing contracts.

Elimination of the supplemental statement was for administrative purposes only. The intent was to enable Customs to have all information relating to a drawback rate for a product in a single drawback statement under its individual Treasury Decision number rather than a rate holder having different rates for different products under one Treasury Decision amended numerous times. There was no intent to change in anyway the drawback rights to be transferred from a predecessor to a successor.

It is evident therefore that under direct identification drawback the successor obtains the right to identify for drawback any and all merchandise (or articles) its predecessor could identify. Under substitution drawback the successor receives the right to identify and/or designate any merchandise/articles its predecessor could identify and/or designate. Under substitution drawback the successor receives the right to designate merchandise used by the predecessor as the basis for drawback only on articles manufactured by it after the date of succession.

Denial of drawback in the current case however is based on a ruling made in Service Headquarters on May 8, 1974, which was

7 of 13 pages (BACKGROUND TO 218254)

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C13

highlighted in the drawback seminar held in June 1974 and the notes resulting from that seminar. The following was disclosed upon review of that ruling.

A Delaware corporation, with factories in several states, divided itself into several corporations. The factories became separate corporations. One such factory was located in Texas and became the Texas corporation. Prior to formation of the new company 90,000,000 pounds of merchandise had been received at the Texas factory. The physical inventory at the time of formation of the new company was 20,000,000 pounds.

Headquarters was asked the procedures to follow to transfer the drawback rights to the Texas corporation. The reply of November 2, 1973, stated that the Texas corporation was to be treated as a successor and in that capacity could designate the 20,000,000 pounds on hand in inventory. However, when inquiry was made further as to the 70,000,000 pounds that had been used the reply of May 8, 1974, was that the Texas corporation could not designate this material as it had been used by the Delaware corporation, even though it had been held that the Texas corporation was successor.

The May 8, 1974, ruling was inconsistent with the November 2, 1973, ruling as well as the policy of transferring drawback rights under a successorship at that time. There is nothing in the file to support this inconsistency or a change from that policy. When the Texas corporation succeeded the operations at the Texas factory, all drawback rights accrued or accruing to the predecessor at that factory were transferred to the successor on the date of succession. The May 8, 1974, ruling was incorrect and the traditional perogatives of successorship are reaffirmed.

The substitution drawback law requires that the same legal person use in manufacturing both the designated and substituted merchandise. The current ruling fulfills this requirement, since a successor is considered legally to be a continuation of the predecessor in the domain covered by the successorship.

HOLDING:

1. A corporation will be approved as the successor of a division of another company, assuming all other requirements of successorship are met.

8 of 13 pages (BACKGROUND TO 218254)

THIS DOCUMENT MAY BE RELEASED TO THE

C14

2. For purposes of substitution drawback (19 U.S.C. 1313(b)) a successor is allowed to designate as the basis for drawback on articles manufactured by it after the date of succession merchandise used by the predecessor prior to the date of succession.

3. For purposes of substitution drawback a successor is not allowed to designate as the basis for drawback on articles manufactured by it prior to the date of succession merchandise used by the predecessor prior to the date of succession.

You are directed to allow the protest.

EFFECT ON OTHER RULINGS:

The unpublished ruling of May 8, 1974, and any other rulings inconsistent with the above policy are hereby revoked.

JAN 14 1957

DB 731.1

Dear Mr. Dill:

The Bureau is in receipt of a letter dated December 10, 1956, from Comstock & Theakston, Inc., Customhouse Brokers, New York, New York, transmitting a letter dated December 3, 1956 from Sharon Steel Corporation, Sharon, Pennsylvania (hereinafter referred to as Sharon Steel), which was approved on the same date by Mallory-Sharon Titanium Corporation, Niles, Ohio (hereinafter referred to as Mallory-Sharon).

The letter of December 3, 1956, is concerned with the allowance of drawback under the provisions of section 313(b), Tariff Act of 1930, on titanium and titanium alloy articles manufactured by Mallory-Sharon at its Niles, Ohio, factory with the use of titanium sponge and titanium and titanium alloy products manufactured from titanium sponge, as authorized in Bureau letter to you dated August 27, 1956, the abstract of which was published as T. D. 54176-F. The said authorization is effective with respect to articles manufactured on and after January 3, 1956, which is the date Mallory-Sharon acquired through purchase from Sharon Steel the land, plant, and equipment of the Niles, Ohio, factory, known as Niles Rolling Mill Division of Sharon Steel Corporation.

It appears that prior to January 3, 1956, a quantity of imported titanium sponge owned by Mallory-Sharon was used in the manufacture of titanium products for the account of the said corporation at the Niles, Ohio, factory, then owned by Sharon Steel. The said processing was covered by T. D. 54121-G. Mallory-Sharon desires to designate the titanium sponge used by Sharon Steel as the basis for the allowance of drawback on articles manufactured by it (Mallory-Sharon) subsequent to January 3, 1956. The question is presented whether the designation of such merchandise is permissible in view of the requirement of section 22.5(a)(2) of the Customs Regulations that the designated merchandise shall be used by the manufacturer or producer of the exported articles within 3 years after the date on which it was received by such manufacturer or producer.

In view of the fact that Mallory-Sharon succeeded to Sharon Steel insofar as operations at the Niles, Ohio, factory are concerned, the Bureau is of the opinion that Mallory-Sharon is entitled to designate titanium sponge which, prior to the date of succession, had been used at the said factory by Sharon Steel in the manufacture of products for the account of Mallory-Sharon. Please be guided accordingly.

Mr. Paul Lawrence
Regional Commissioner of Customs
Baltimore, Maryland 21202

Dear Mr. Lawrence:

You are hereby authorized to allow drawback on petroleum products manufactured under the provisions of section 1313(b), title 19, United States Code, by Gulf Oil Company of Pennsylvania, Philadelphia, Pennsylvania, at its Philadelphia, Pennsylvania, refinery, with the use of crude petroleum or petroleum derivatives, upon compliance by the manufacturer with the provisions of the rate of drawback set forth in section 22.6(g-1) of the Customs Regulations.

There are enclosed, approved, copies of the manufacturer's drawback statement and supplemental drawback statement subscribed to, respectively, on July 28, 1971, and March 13, 1973, requesting the foregoing action and containing the manufacturer's proposals as to the procedures it will follow, including procedures for preparing drawback claims, and the records it will keep. Such records shall include those prescribed in the above section 22.6(g-1) of the regulations.

It is noted that the opening inventory shown on Exhibit A, as well as the drawback factors relating to completed stocks in inventory, are those of the previous owner of the Philadelphia refinery. In this regard, the Gulf Oil Company of Pennsylvania is considered as standing in the same place as any other successor, and since the prior owner could use these figures, the right to use them accrues to the Gulf Oil Company of Pennsylvania.

This authorization is issued with the understanding that any exhibit relating to the claiming of residual rights will be forwarded to the Bureau of Customs for approval prior to payment of a claim involving such residual rights.

ISSUE:

If fungible merchandise is entered temporarily free of duty under bond (TIB) under item 864.05, Tariff Schedules of the United States, for foreign sales and under consumption entries for domestic sales, and is then commingled, may the TIBs be cancelled on a FIFO basis and the consumption entries identified for domestic withdrawals?

FACTS:

Cut rag tobacco will be blended in Germany and imported for use in manufacturing cigarettes. The tobacco to be used for cigarettes for the domestic market will be entered for consumption with duty being paid thereon. The tobacco to be used for cigarettes for the export market will be entered under item 864.05, TSUS. All the imported tobacco will be fungible (i.e. commercially identical) and will be commingled in storage and manufacture.

LAW AND ANALYSIS:

An importer at the time of importation under item 864.05, TSUS, must have the intent to export the articles produced from the merchandise. If the articles or the merchandise are diverted to the domestic market, the importer is liable under its bond for twice the duties and in addition is subject to a penalty if it is established that the intent to export was not present at the time of exportation. Thus the importer will have to have on hand at all times sufficient merchandise and/or articles to cancel all of the open TIB entries. On the other hand merchandise which is imported under a consumption entry may be exported or used to manufacture articles which are exported.

Commingling of fungible TIB merchandise and other merchandise has previously been approved (C.S.D. 84-12). In the present case the importer proposes to commingle fungible tobacco imported under TIB and consumption entries and to cancel the TIB entries on a FIFO basis. In addition the importer would have on hand at all times sufficient merchandise or articles to cancel all open TIB bonds.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D6

HOLDING:

Fungible merchandise imported under TIB and under consumption entries may be commingled and the TIBs cancelled on a FIFO basis, provided the importer has on hand at all times in the commingled inventory sufficient merchandise (or articles manufactured therefrom) to cancel all outstanding TIBs.

D1

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

03 DEC 1985

REFER TO
DRA-1-09-CO:R:CD:D
218407 RB

Issues: (1) Is imported merchandise eligible for drawback under the substitution same condition drawback law, 19 U.S.C. 1313(j)(3), when it is initially transported under a special permit for immediate delivery to the importer's premises, and is thereafter entered for transportation and exportation, and exported?

(2) Is perishable merchandise, such as fresh fruits and vegetables, eligible for drawback under the same condition drawback law, 19 U.S.C. 1313(j)(1) or (3)?

Facts: Fresh fruits and vegetables are imported at various times, and initially shipped under a special permit for immediate delivery to the importer's premises for examination and sorting, as authorized under 19 U.S.C. 1448(b) and 19 CFR 142.21(b). As a result, part of each shipment is entered for consumption, duty-paid, and the balance is entered for transportation and exportation, and exported. The exported merchandise is made the subject of claims for drawback under the substitution provision of the same condition drawback law, 19 U.S.C. 1313(j)(3), and other imported merchandise entered for consumption, duty-paid, 2 or 3 days prior to the date of exportation is randomly designated as a basis for drawback.

Law and Analysis: (1) It has been observed that "[t]he express provisions relating to drawback under 19 U.S.C. 1313 fundamentally do not apply to imported merchandise until 'after its release from the custody of the Government.' It is also acknowledged in this regard that same condition drawback, subsection (j), 'would apply to (imported) articles entered, or withdrawn from warehouse, for consumption'" (citations omitted) (Headquarters letter dated October 24, 1985, file DRA-1-09-CO:R:CD:D 218032 [imported merchandise entered for warehouse, and in Customs custody and control, not eligible for substitution same condition drawback if withdrawn and exported]).

In the present case, when transported to the importer's premises under a special permit for immediate delivery, the subject merchandise is considered as remaining in Customs custody (19 CFR 142.22(b); see T.D. 79-221, 44 F.R. 46794, the notice of proposed rulemaking leading thereto, 43 F.R. 55774 (1978), and T.D. 76-220, 41 F.R. 33248).

DS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

When thereafter entered for transportation and exportation, the merchandise continues in Customs custody. See American Shipping Co. v. United States, 65 Treas. Dec. 178, T.D. 46879. In that case, imported tomatoes, entered for transportation and exportation, were diverted for inspection at the request of the shippers, a consumption entry filed, duty-paid, and an unconditional delivery permit issued for the merchandise. The tomatoes, however, were subsequently exported through error. In denying a claim for refund of duty on the ground that no provision of law then existed justifying such action under the circumstances after the merchandise was released from Customs custody, the Customs Court stated in this respect that "[w]hen the consumption entry was made...and the delivery permit issued, possession and control passed from the Government to the importers..." (emphasis added) (supra, at 180) (also see United States v. Maine Central Railway Co., 9 Ct. Cust. Appls., T.D. 38015; and Illinois Central Railroad Co. v. United States, 2 Cust. Ct. 422, C.D. 168).

Furthermore, in the October 24, 1985, ruling, cited above, concerning imported merchandise entered for warehouse, it was implicit that such merchandise, when withdrawn for exportation or for transportation and exportation, would thereby remain continuously in Customs custody until exported (also see T.D. 4843; and see Hudson Shipping Co., Inc. v. United States, 18 Cust. Ct. 17, 21, C.D. 1038).

Imported merchandise, initially transported under a special permit for immediate delivery to the importer's premises and then entered for transportation and exportation, and remaining in Customs custody and control, consequently, does not fall within the scope of section 1313, including, in particular, the provisions for same condition drawback under subsection (j).

Parenthetically, even if same condition drawback were applicable herein, the necessity that the claimant have "possession" of the substituted merchandise as contemplated by section 1313(j)(3) would not be met while the merchandise remains in Customs custody and control (see American Shipping Co., supra). In addition, it is axiomatic that the designated and substituted merchandise herein would not be fungible and in the same condition, if each is sorted respectively from the same import shipment.

(2) The term "merchandise" as used in section 1313, including subsection (j) thereof, means "goods, wares and chattels of every description" (19 U.S.C. 1401(c)). Assuming that there is compliance with the law and relevant regulations, therefore, perishable goods would be eligible for same condition drawback.

D9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Holdings: (1) Imported merchandise is not eligible for drawback under the substitution same condition drawback law, 19 U.S.C. 1313(j)(3), when it is initially transported under a special permit for immediate delivery to the importer's premises, and is thereafter entered for transportation and exportation, and exported.

(2) Perishable merchandise, such as fresh fruits and vegetables, is eligible for same condition drawback under 19 U.S.C. 1313(j)(1) or (3), assuming that there is compliance with the law and applicable regulations.

Gentlemen:

Reference is made to your letter of December 9, 1930, requesting that all drawback rates issued in behalf of your clients operating under the provisions of Section 313 (b), Title III, of the Tariff Act of 1930, when such clients are covered by drawback rates previously promulgated, be made effective as to articles exported on or after June 18, 1930, instead of on or after the date on which the applications were received in the Bureau.

You state that inasmuch as you were not advised that applications to operate under Section 313 (b) would be required, you assumed that such applications were not necessary in the case of firms already covered by drawback rates.

As will be noted by reference to Treasury Decisions 44469-A, B, C, F, and J, drawback rates under Section 313 (b) have been made effective as to articles manufactured on or after June 18, 1930, which are exported on or after the date on which the applications to operate under the said section and paragraph were received in the Bureau, even in instances where the firms at interest were covered by drawback rates previously promulgated. Treasury Decisions 44469-G, H, and O, were made effective as to articles manufactured and exported on or after June 18, 1930, for the reason that the applications in these cases were filed prior to the passage of the Tariff Act of 1930, the firms at interest having taken steps to protect their rights.

In this connection, the following is quoted from a recent decision dealing with the filing of applications by secondary manufacturers operating under Section 313 (b):

> "The Bureau wishes to advise, however, that drawback rates issued in behalf of secondary manufacturers operating under Section 313 (b) have been made effective as to articles manufactured on or after June 18, 1930, which are exported on or after the date the application to manufacture under Section 313 (b) was received in the Bureau, and within the three year time limitation on exportation prescribed by Section 313 (h), of the Tariff Act of 1930."

D11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

No circumstances appear which would justify an exception in favor of your clients. The Bureau is therefore constrained to deny your request.

Respectfully,

(Signed) A. W. Epes

Commissioner of Customs.

SEP 2

The Supervising Customs Agent
201 Varick Street, Room 406
New York 14, New York

Sir:

Reference is made to your letter of May 21, 1953 (1-5052), in reply to Bureau letter of May 13, 1953, further in regard to an application filed on May 3, 1951, by [redacted] for the establishment of a rate of drawback on aluminum alloy stampings or pressings manufactured with the use of aluminum alloy sheets.

The above-mentioned application was returned to you with Bureau letter of May 13, 1953, with the request that you conduct a further investigation, and if warranted, secure from the firm a sworn statement upon which a rate of drawback under the provisions of section 313(b) of the tariff act may be predicated. You note in your letter that the application in question is dated May 1, 1951, and is apparently intended to cover articles manufactured prior to that date and articles which were in the process of manufacture on that date. Since the Bureau's ruling in the case of [redacted] holding iron and steel in various forms to be "metal" was, in view of T. D. 52935, made effective as to manufactures and exportations on and after August 8, 1951, you raised the question whether any proposed rate in favor of [redacted] can be made effective to cover manufactures and exportations on and after a date prior to August 8, 1951.

You also note that evidence obtained during your original investigation in this case showed that part of the involved manufacturing operations were performed by [redacted] Although both that firm and the applicant were advised of the necessity for filing an application for a rate of drawback covering the operations conducted by [redacted] such application has not as yet been received. You therefore ask whether, in view of section 22.3(a) and 22.4(n) of the customs regulations, any drawback rates which might be promulgated in favor of the two corporations would be effective only as to the products which are exported on and after the date on which an application for a rate of drawback is filed by [redacted]

Di3

2

With regard to your first question, the restriction on the effective dates of manufacture and exportation in T. D. 53253-A, in favor of [redacted], was based on T. D. 52935 which provides that no imported ferrous metal may be legally designated as the basis for the allowance of drawback under section 313(b), Tariff Act of 1930, as amended by Public Law 109, approved August 8, 1951, if such merchandise was entered for consumption, or withdrawn from warehouse for consumption, prior to August 8, 1951 (the date on which Public Law 109 was approved).. Since section 22.5(a)(4) of the regulations requires that articles exported with benefit of drawback be manufactured within 1 year after the date on which the designated merchandise was received by the manufacturer of the exported articles, it is apparent, in view of T. D. 52935, that rates of drawback covering articles manufactured under section 313(b) of the tariff act with the use of ferrous metal cannot be made effective as to articles manufactured and exported prior to August 8, 1951.

Public Law 109 made no change in section 313(b) of the tariff act insofar as nonferrous metal is concerned . Subsequent to the enactment of Public Law 109 the Bureau reconsidered the construction placed by it on the term "metal" as used in section 313(b) of the tariff act and the resultant decision, which is applicable to nonferrous as well as ferrous metal was published as T. D. 53255. The retroactivity of that decision, as it pertains to ferrous metal, is necessarily limited to August 8, 1951, the date of approval of Public Law 109. However, no such limitation exists with regard to nonferrous metals.

The Bureau, therefore, is of the opinion , insofar as your first question is concerned, that providing the drawback law and regulations are complied with, the proposed rate of drawback in favor of [redacted], could be made effective as to articles which are manufactured on or prior to May 3, 1951, and exported on and after that date.

Concerning your second question, in view of section 22.4(n) of the customs regulations, a rate of drawback in favor of [redacted], could not be made effective on articles exported prior to the date of receipt of the firm's application for the establishment of that rate. Inasmuch as the proposed drawback rate in favor of [redacted], would be separate and distinct from that of [redacted] the dates of first manufacture and exportation authorized in a rate in favor of the former firm would not be limited by the facts found to exist in the case of the latter, but rather would be limited in the case of date of exportation to the date of filing of its own application, that is May 3, 1951, and in the case of the date of manufacture to the earliest date on which a lot exported on and after May 3,

279516

D14

1951, was manufactured by it, provided the records maintained by the firm beginning that date were found to be adequate for drawback purposes and the drawback law and regulations were complied with.

However, even though the proposed rate of drawback in favor of [redacted] might, for example, authorize the allowance of drawback on articles manufactured by that firm on and after May 1, 1951, and exported on and after May 3, 1951, drawback would not be allowed on articles on and after such dates if, subsequent to manufacture by that firm, the articles were subjected to further manufacture by [redacted] and exported prior to the date of exportation authorized in the proposed rate of the latter firm. It is apparent therefore, that if [redacted], has ceased to manufacture for exportation the articles covered by its application, and if all such articles manufactured by it in the past have been subjected to further manufacturing processes by [redacted], prior to exportation, no advantage would be gained by the firm's submission of a drawback statement and the establishment of a rate of drawback in its favor.

The application of [redacted] is returned with the request that you conduct a further investigation of the matter and acquaint the manufacturer with the views of the Bureau expressed herein. Please secure from the manufacturer, as the circumstances warrant, either a drawback statement upon which a rate may be predicated, or a statement setting forth its agreement to the cancellation of the application.

Very truly yours,

(Signed) E. M. Griffin

Chief, Division of
Drawbacks, Penalties, and Quotas

Enclosure No. 96364

[redacted]

Dear [redacted]

This is in reference to your letter of August 4, 1977, on behalf of your client, [redacted], requesting a valuation ruling declaring the prospective importation described below to result in sales prices which establish export value within the meaning of section 402(b) and 402(b)(1)(B) of the Tariff Act of 1930, as amended (19 U.S.C. 1401(b) and 19 U.S.C. 1401(1)(b). The prospective transaction involves the sale of assembled apparel, not on the Final List, which you indicate would be entitled to the benefits of item 807.00 of the Tariff Schedules of the United States (TSUS), to [redacted] from an unrelated foreign assembler. You outline the circumstances of the prospective transaction as follows:

> [redacted] proposes to manufacture in the United States textile apparel components for assembly off-shore pursuant to item 807.00, TSUS. [redacted] will sell the components to the assembler, and the assembler will then sell the assembled products to [redacted] for resale primarily in the United States of America. Some merchandise will be sold to [redacted] for sale in third country markets. In such sales [redacted] will act as distributor and incur the additional costs related to warehousing, marketing, promotion, returns and allowances, billing and collection, none of which are to be incurred by the assembler in his sales to [redacted] There will be no sales of the textile apparel in the home market, nor will the finished apparel be sold to any other purchaser than [redacted] With respect to the character of the parties, [redacted] and the foreign assembler are not related parties within the meaning of section402(g)(2) of the Tariff Act of 1930, as amended. Each entity has its own Board of Directors, officers, and paid employees. None of the directors and officers of one corporation are directors or officers of the other. There is no common stock ownership or blood relation between the principals of either corporation. [redacted] and the foreign

541581

E2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

assembler independently own their own equipment and land and buildings; each maintains a separate financial system including its own set of books, bank accounts and accounts payable and receivable, and each pays its own bills and appropriate taxes. With respect to the elements of the transaction, each shipment of components and finished apparel will be accompanied by a commercial invoice issued by the appropriate supplier (in the case of apparel, the foreign assembler). Title will pass on the components, CIF foreign port of importation, and on the finished apparel FOB foreign port of exportation. Orders will be placed by letter or telex and payment will be made either in kind and/or in cash. Specifically, [redacted] will pay for assembled articles by its shipment of components plus cash, while the foreign assembler will pay for components by its shipment of assembled articles.

With respect to the determination of the price, the sales price of the completed garment will be set exclusively by the foreign assembler. This price will be calculated on the sum of the cost of materials, the cost of labor, general expenses and profit, plus the cost of export packing. The profit percentage will be determined soley by the foreign assembler. The amount of this percentage will be set up by competitive market forces between the respective purchaser and seller. The cost of material will also include all appropriate costs incidental to shipment of the American components to the assembler's facility in the Carribean.

541581

With respect to the prospective importation, under item 807.00, TSUS outlined above, it is your contention that [redacted] and its assembler are engaged in bona fide sales, and that the sales prices of the assembled articles from the assembler to [redacted] fairly reflect the market value, and, therefore, represent export value under sections 402(b) and 402(f)(1)(B), Tariff Act of 1930, as amended.

The correspondence indicates that [redacted] and the foreign assembler are separate legal entities, that they are governed by different boards of directors and officers, that each maintains its own books and accounts, that title to the American components will pass to the foreign assembler, CIF, foreign port of exportation, and that the sales prices of the assembled articles will be determined by the foreign assembler based on competive market forces between the purchaser and seller. Under the circumstances described, we are of the opinion that the prospective transaction is one where [redacted] will sell its components to the foreign assembler and will purchase back the assembled articles

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E3

41

from the assembler. From the information furnished it appears that the price to be paid by [redacted] to the foreign assembler will fairly reflect the market value and that price should be taken as export value and used for the appraisement of the merchandise.

We note, however, that this discussion is advisory in nature and that the actual determination as to whether or not the price of the articles to be imported by [redacted] will in fact fairly reflect the market value is an appraisement issue which will be decided by an appraising officer when the merchandise is presented for entry.

Sincerely yours,

Thomas L. Lobel

for Salvatore E. Caramagno

542220

[redacted]

Dear [redacted]

This refers to your letter of September 8, 1980, inquiring about the dutiable status of a prototype under the Trade Agreements Act of 1979 (TAA).

You ask whether, under the statutory definition of the term "assist" a prototype sample developed entirely by the buyer in his research and development department in the United States, and furnished to the foreign manufacturer without cost, would be dutiable under the TAA. You explain that the prototype is simply a pattern or template followed by the manufacturer in producing the finished product.

The term "assist" is defind in 19 U.S.C. 402(h)(1)(A). Subsection (iv) of that provision relates to certain "engineering, development, artwork, design work, and plans and sketches that are undertaken elsewhere than in the United States...."

Engineering and development undertaken in the United States are excluded from the definition of "Assist," and are not dutiable. A prototype developed entirely in the United States, by the United States buyer or his employees, and used as a pattern or template will not be treated as a dutiable assist under the cited statutory definition of the term.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Request for Internal Advice No. 169/80; Dutiable Status of U.S.-Produced Pattern Generator Tapes Under Section 402 of The Tariff Act of 1930, As Amended by the Trade Agreements Act of 1979 (TAA)

This is in reference to your memorandum dated August 29, 1980, requesting our opinion with regard to the above-captioned matter. In addition to this issue, the importer has presented a number of other questions for our consideration which we will address. Since New York has submitted their views in connection with this matter, we will refer to their position before ruling on each issue. Our response in each case assumes the merchandise was exported on or after July 1, 1980.

ISSUE No. 1:

Whether a pattern generator tape produced in the United States and furnished free of charge by the importer to several foreign manufacturers is an assist under the TAA.

FACTS:

The subject item is an ordinary one-half inch magnetic tape that contains instructions meaningful to a pattern generator machine which is used to fabricate a photomask. The photomask manufacturer uses the tape to layout and print the desired circuit pattern onto blank photomasks. A sequence of steps or developmental stages, undertaken in the United States, precedes the generation of the tape. The steps are as follows:

E6

1. Integrated circuit definition
2. Integrated circuit logical design
3. Integrated circuit electrical design
4. Integrated circuit topological layout from electrical schematic
5. Digitizing of integrated circuit topological layout
6. Correction of digitized data
7. Conversion of digitized data to D. W. Mann 3000 pattern generator data
8. Revision of D. W. Mann 3000 pattern generator data to fit vendor's photomask manufacturing process

The importer advises that a visual printout of the information contained on a pattern generator tape would consist of numbers separated by semi-colons and associated with these numbers would be letters such as "X", "Y", "W", "H", and "A". The "X" and "Y" letters represent the X and Y coordinates for the numbers. "W" represents the width of exposure, "H" represents the height of exposure, and "A", when appropriate, specifies the angle of exposure. Width, height, and angle of exposure refers to the control for the slit of a D.W. Mann pattern generator through which light shines to expose a sensitized surface in the process of creating a photomask. These numbers and letters define rectangular areas -- their size and location. That is, they determine the dimensions for the opaque areas to be produced on a glass surface and are detected by the foreign vendor's equipment from the tape and used to control a D. W. Mann pattern generator in the process of producing photomasks. The numbers and letters are the result of digitizing a topological layout which, in turn, is the result of circuit design and schematic drawings.

542324

E7

The importer regards the tape as equivalent to the dimensional specifications of the drawings for the desired integrated circuit. He argues that the tape does not perform "immediate functions" as would a tool and similar items which are involved in giving shape, form, and physical characteristics to imported merchandise. Rather, the importer contends that a pattern generator tape constitutes a drawing in digital data form in which the data are detected and used with a vendor's "tools" to produce the imported merchandise. Therefore, he is of the opinion that the tape is not an assist under the TAA, since the "drawing" is produced within the United States. See section 402(b)(1)(A)(iv).

On the other hand, our New York office is of the opinion that the tape is a tool as described in section 402(a)(1)(A)(ii), and therefore is dutiable as an assist. Headquarters Ruling Letter 055104, dated October 13, 1978, is cited in support of this position.

LAW AND ANALYSIS:

Section 402(a)(1)(A) provides that the term "assist" means any of the following if supplied directly or indirectly, and free of charge or at reduced cost, by the buyer of imported merchandise for use in connection with the production or the sale for export to the United States of the merchandise:

(i) Materials, components, parts, and similar items incorporated in the imported merchandise.

542324

E8

(ii) Tools, dies, molds, and similar items used in the production of the imported merchandise.

(iii) Merchandise consumed in the production of the imported merchandise.

(iv) Engineering, development, artwork, design work, and plans and sketches that are undertaken elsewhere than in the United States and are necessary for the production of the imported merchandise. (Emphasis added).

In our opinion, neither subparagraph (i) nor subparagraph (iii) is applicable to the subject tape. Nor is subparagraph (iv) applicable, since the item is produced within the United States. Therefore, to be an assist under the TAA, the tape must fall within subparagraph (ii), i.e., "Tools, dies, molds, and similar items used in the production of the imported merchandise."

In Headquarters Ruling Letter 055194, dated October 13, 1978, involving appraisement of certain merchandise under the predecessor statute to the TAA, we held that the same pattern generator tape was an assist. Since the TAA has radically altered the law dealing with assists, that ruling is inapplicable to the instant case. In the course of that opinion, however, we stated that the tapes were "...essential, functional and integral tools necessary to the production of the (imported) photomasks." (Emphasis added). We did not define what the term "tool" represented, nor was it necessary to do so for the purposes of that ruling.

RESPONSE TO THE

E9

542324

542324

In Headquarters Ruling Letter 065209, dated July 25, 1980, we stated that "The term 'design' is used here in its ordinary meaning as being to conceive and execute shapes, figures, and lines in an arrangement one to the other so as to result in a visual impression readily distinguishable from any other arrangement of shapes, figures, or lines." The Random House Dictionary of the English Language, Unabridged, (Copyright 1973), provides that a tool is "1. An implement, especially one held in the hand, for performing or facilitating mechanical operations, as a hammer, saw, file, etc."

Determination:

After consultation with the Technical Services Division, Headquarters, and after careful consideration, we find the tapes to be in the nature of design work, rather than tooling, primarily because the tape itself is a drawing in digital data which represents specifications which are furnished the manufacturer solely to obtain the desired dimensions of the photomask. In our prior ruling, the reference to "tools" was not used in a literal sense, nor was it intended to construe any statutory term or phrase. Accordingly, we do not find our general description of the tape in that case, decided under the predecessor statute, to be relevant.

Thus, since the work involved is performed within the United States, section 402(h)(i)(A)(iv) is inapplicable; nor do the tapes fall within

E10

512324

any of the other assist categories. Under the circumstances, we find that the pattern generator tapes are not assists within the meaning of section 402(h)(i)(A), TAA.

ISSUE No. 2

The importer pays $30,000 for various changes to producer A's processes to produce slices with MOS chips. The importer proposes to add the $30,000 to one entry where the slices have been brought into the United States, through the port of Honolulu.

New York

This proposal is acceptable.

LAW AND ANALYSIS:

Section 152.105(e) of the Customs Regulations provides the following:

> The apportionment of the value of assists to imported merchandise will be made in a reasonable manner appropriate to the circumstances and in accordance with generally accepted accounting principles. The method of apportionment actually accepted by Customs will depend upon the documentation submitted by the importer. If the entire anticipated production using the assist is for exportation to the United States, the total value may be apportioned over (i) the first shipment, if the importer wishes to pay duty on the entire value at once (ii) the number of units produced up to the time of the first shipment, or (iii) the entire anticipated production. In addition to these three methods, the importer may request some other method of apportionment in accordance

E11

with generally accepted accounting principles. If the anticipated production is only partially for exportation to the United States, or if the assist is used in several countries, the method of apportionment will depend upon the documentation submitted by the importer.

Determination

The importer may apportion the total value of the assists over the first shipment. (We are assuming for these purposes that the particular items involved, which are not described, and which were acquired with the $30,000 furnished by the importer, are assists under the TAA).

Issue No. 3

This issue, relating to the value of the pattern generator tapes as an assist (Point 2 of New York's memorandum), is relevant only if we treat the tapes accordingly. Since the tapes do not fall within any of the various assist categories (see discussion, above) the issue is moot.

Issue No.4

The importer proposes that photomasks furnished by him be valued as follows: 1) If purchased, the item will be valued at the amount paid to the vendor; 2) If produced by him the photomasks will be valued at the cost of the material, plus labor with an addition for overhead costs (The photomasks are dutiable assists under section 402(h)(1)(A)(i), TAA).

E12

542345

542324

New York

Agrees with the importer as regards the value if acquired by purchase, however, that office believes the importer should add a profit to the materials, labor and overhead costs where photomasks are produced by him.

LAW AND ANALYSIS:

The Statement of Administrative Action adopted by Congress in connection with the TAA and section 152.103(d)(2), Customs Regulations, provide that if the assist consists of tools, dies, molds, or similar items used in the production of the imported merchandise, acquired by the buyer from an unrelated seller, the value of the assist is its cost of acquisition. If the assist were produced by the buyer or a person related to the buyer, its value would be the cost of its production. Accordingly, the value of an assist produced by the buyer or a person related to the buyer is limited to the cost of producing that assists. Profit is not a cost and should not be added to the value of the assist.

Determination

An amount for profit should not be added to the value of the assist furnished by the importer.

Issue No. 5

The importer proposes to accumulate the costs of the technical advisors' trips made to the manufacturer including travel and appropriate amounts for salaries of personnel involved. (From the importer's description it does not appear that any of these visits were incidental

E13

513324

to other engineering, development, artwork, etc., that were undertaken within the United States). These costs will be allocated to the manufacturer based on the time spent in assisting them with the production of the CMOS slices.

New York

Agrees with this proposed treatment.

Determination

These activities are nondutiable because they do not fall within any definition of assist. It is irrelevant whether or not the activity is incidental to other engineering, development, artwork, etc., that was undertaken within the United States (See TAA No. 32, question No. 2, copy attached).

Issue No. 6

The slices produced by one of the foreign manufacturers are brought to the United States, where they are analyzed, problems identified, and solutions determined. This information is then communicated to the manufacturer. In some instances, the slices are scribed and broken into individual chips, assembled into completed devices and then analyzed.

The importer proposes to determine the costs of the technical analysis of the slices in the United States by using a standard rate and applying that rate to an estimate of the time spent in analyzing slices from the manufacturer. The rate used would include labor, material and overhead.

E14

542324

New York

That office is of the opinion that this technical analysis would not be considered an assist if performed by an individual who is domiciled in the United States while he is acting as an employee or agent of the buyer of the imported merchandise. If this analysis is not performed by an employee or agent of the manufacturer while domiciled in the United States, New York believes that the importer's proposed valuation is acceptable.

Determination

We are in agreement with New York's analysis as well as the importer's method of costing the assist, if an assist is in fact involved.

Issue No. 7

The importer would identify the test equipment and parts supplied to one of the foreign manufacturers at less than full cost or at no charge. He proposes to determine the cost of these articles in the following manner: If produced by the importer, these articles would be valued at the sum of the materials, labor and overhead required to produce the articles; if purchased, the articles would be valued at the amount paid to the vendor plus purchasing, hauling, storage and inspection type expenses and freight costs for transporting the test equipment to the manufacturer. The importer believes that development costs for the test equipment should be treated in accordance with the principle stated

F1

in United States v. Border Brokerage Company, Inc., A.R.D. 288 (1971). Under this principle, the cost of development is to be allocated among the number of units definitely produced. Thus, the importer proposes that the development costs be allocated among the number of testers to be produced and a proportional amount be allocated to the test equipment supplied to the manufacturer.

New York

This proposal is acceptable except that -

1) The importer may allocate these costs over the number of pieces expected to be produced as outlined in Oxford University Press v. United States, 36 CCPA 102, C.A.D. 405 (1949); 2) a profit should be added to the value of these articles produced by the importer.

Determination

Section 152.102(e), TAA, provides for the apportionment of the value of assists. If apportioned in a reasonable manner and in accordance with generally accepted accounting principles, the importer's method of allocating the value of the assist will be acceptable. In accordance with our holding, above, profit is not to be added to the value of the assist produced by the importer.

Issue No. 8

The importer proposes to add a factor of 1.37 percent to the value of the merchandise produced by one of the manufacturers, representing the cost of engineering and development. This percentage is an estimate based on applying to the value of the net sales

512334

F2

542324

billed the average royalty rate experienced by the importer in license agreements granted and entered into with respect to technology applicable to the class or kind of merchandise involved.

New York

The amount for engineering and development would not be an assist if performed by an individual who is domiciled in the United States while he is acting as an employee or agent of the buyer of the imported merchandise. (See section 402(h)(1)(B)).

Determination

If the engineering, development, etc., is performed within the United States, that activity would not be an assist, since only work of that nature performed outside of the United States is considered to be an assist. Section 402(h)(1)(A)(iv). Otherwise, we agree that the method as proposed is acceptable.

Issue No. 9

The importer reimburses one of the manufacturers for the cost of its engineers, transportation, etc., to come to the United States and learn the operation of the test equipment. He proposes that the value of such assists be the amount of such reimbursement.

New York

That office is in agreement with this proposed treatment.

F3

Determination

Under section 402(h)(1)(A)(iv), TAA, "Engineering, development, artwork, etc...." undertaken elsewhere than in the United States is a dutiable assist. We agree with New York that such training and transportation is part of the value of this assist. The amount paid by the importer reimbursing the manufacturer for such cost represents the value of the assist.

Issue No. 10

In the case of the second manufacturer involved, the importer contends that there should not be added any amount for R&D because this producer possessed the ability to produce the CMOS chips without any help from the importer.

New York

The importer has advised by teletype that the R&D referred to is very basic R&D that he cannot allocate to any merchandise. R&D concerned with design of chips for specific articles such as computers, calculators, television apparatus and other such items are allocated to those articles. Likewise, R&D performed to improve technology is also allocated to specific merchandise.

Determination

Under the TAA, such R&D would not be an assist if undertaken within the United States. (Section 402(h)(1)(A)(iv)). Further, R&D undertaken elsewhere than in the United States would be an assist only if necessary for the production of the imported merchandise. (Section 402(b)(1)(A)(iv)).

54

542324

Prior Law

For merchandise exported before July 1, 1980, R&D performed by the importer within the United States, if necessary for the production of the imported merchandise, is dutiable as an assist. (See, for example, Ford Motor Company v. United States, 29 Cust. Ct. 553, A.R.D. 9 (1952), and Headquarters Letter Rulings 400255 and 541511, dated January 18 and December 8, 1977, respectively.)

542325 TEL
TAA 123

542325

[redacted]

Dear [redacted]

This is in reply to your letter dated December 3, 1980, requesting a ruling that certain design costs are not "assists" for purposes of either "transaction value" or "computed value" under section 402(h)(1)(A) of the Tariff Act of 1930, amended by the Trade Agreements Act of 1979 (TAA). The specific design costs which you are concerned about occur in the United States and are the following:

DESIGN DEPARTMENT EXPENSES

Designer's Salaries
Sample Hand Salaries
Rent and Depreciation Charges
Design Coordinator's Salaries
Pattern Maker's Salaries
Design Pension
Design Director's Salary
Model Fees
Telephone Charges
Travel Expenses
Office Supply Expenses
Equipment Repair
Rent on Equipment
Finish Samples

As you know, section 402(h)(1)(A) of the TAA provides:

(1)(A) The term 'assist' means any of the following if supplied directly or indirectly, and free of charge or at a reduced cost, by the buyer of imported merchandise for use in connection with the production or the sale for export to the United States of the merchandise:

"(i) Materials, components, parts, and similar items incorporated in the imported merchandise.

"(ii) Tools, dies, molds, and similar items used in the production of the imported merchandise.

F6

"(iii) Merchandise consumed in the production of the imported merchandise.

"(iv) Engineering, development, artwork, design work, and plans and sketches that are undertaken elsewhere than in the United States and are necessary for the production of the imported merchandise.

Since we have assumed for purposes of this response that the design expenses are undertaken within the United States, it can be said that the design expenses would not be considered "assists" for purposes of section 402(n)(1)(A), in considering both transaction value and computed value.

In so stating, however, your attention is directed to section 402(g)(3) of TAA which provides:

(3) For purposes of this section, information that is submitted by an importer, buyer, or producer in regard to the appraisement of merchandise may not be rejected by the customs officer concerned on the basis of the accounting method by which that information was prepared, if the preparation was in accordance with generally accepted accounting principles. The term 'generally accepted accounting principles' refers to any generally recognized consensus or substantial authoritative support regarding--

"(A) which economic resources and obligations should be recorded as assests and liabilities;

"(B) which changes in assests and liabilities should be recorded;

"(C) how the assests and liabilities and changes in them should be measured;

"(D) what information should be disclosed and how it should be disclosed; and

"(E) which financial statements should be prepared.

The applicability of a particular set of generally accepted accounting principles will depend upon the basis on which the value of the merchandise is sought to be established.

542325

57

U.S. Customs Service interprets the first sentence of this provision as being a bar on Customs telling an importer, buyer, or producer how to keep its books. This is, in our opinion, in accordance with the legislative history. See for example, page 56 of the House of Representatives Report of the Committee on Ways and Means to Accompany H.R. 4537, wherein it is stated;...

> the intent is to allow the importer, buyer, or producer to prepare his figures in any one of a variety of acceptable methods, and Customs will not reject the manner in which such information is organized, so long as the preparation and methods are in accordance with generally accepted accounting principles.

Accordingly, we cannot categorically state that design expenses are not dutiable for purposes of computed value. What we can state, however, is that in those cases where such design costs are not carried on the producer's books as either a cost or value of materials and or fabrication or as a general expense and such treatment is in accordance with generally accepted accounting principles, then such costs would not be part of computed value.

With regard to your comments concerning the furnishing of non-dutiable cost information to Customs, we would address your attention to the last paragraph on page 3 of TAA #4, in which it is stated:

> Insofar as the continued reporting of these costs to Customs is concerned, Customs does not intend to burden importers with the requirement of submitting unnecessary cost information, so that it is not our present intention to require cost information relating to those items listed in paragraph number 1 of your letter. This of course is to be distinguished from those situations in which Customs has a legitimate interest in learning the duty consequences of the particular transaction under scrutiny. For instance, when the question of 402(n)(1)(4)(iv) arises, Customs should be advised that certain "engineering," development," "artwork,", etc., was undertaken within the United States and is

542325

78

therefore, not to be added to the price actually paid or payable.

Sincerely,

(Signed) Irving W. Smith, Jr.

Request for Internal Advice No. 214/80;
Value of Metal Stamper

The issue in the case is whether a metal "stamper" used to press a record is a tool, die, mold or similar item under The Trade Agreements Act of 1979 (TAA); and if so, what are the elements of cost which comprise the value of the assist?

The importer is involved in the production of 33 1/3 r.p.m stereo records. It contracts with recording artists, hires musicians, the recording studio and the various technicians necessary to produce a digital recording (tape) of the sessions. From the tape is produced a master lacquer which is then plated to make the metal master from which is made the mother and from which is made the stamper. The stamper is then used, one for each side of the record, to stamp out the vinyl records which are the product which is imported and sold at the retail level.

The whole process described above is, in this case, done in the United States up to and including the production of the stampers. The stampers are exported to the manufacturer in Japan to be sent to the importer in dust covers but without record jackets. The invoiced price of the records represents only the charge for the materials, labor, and profit of the manufacturer.

Under section 402(h)(1)(A), TAA, the term "assist" means certain enumerated items if supplied directly or indirectly, and free of charge or at reduced cost, by the buyer of imported merchandise for use in connection with the production or the sale for export to the United States of the merchandise. Included among the listed items are "tools, dies, molds, and similar items used in the production of the imported merchandise."

F10

It is clear from the description and function of the metal stamper that its use is analagous to that of a mold and that without it the records as imported could not be produced. Accordingly, we find that the metal stamper is in the nature of a mold or similar item used in the production of the imported merchandise, and therefore is a dutiable assist.

The second issue is the value of the assist. The importer has advised that the following costs were incurred to produce the metal stamper: 1) Musicians and Arrangements - $6,100; 2) Rehearsal Pay - $ 1,000; 3) Rehearsal Hall Rent - $450; 4) Agency Fee - $350; 5) Studio Cost - $3,500; 6) Digital Recorder - $4,000; 7) Engineer - $1,000; 8) Cartage - $100; 9) Mastering - $800; 10) Plating - $1,500; and 11) Producer - $8,000. The total cost is $28,800.

Section 152.103(d)(2) of the Customs Regulations provides that the value of an assist in the nature of a tool, die, mold, or similar item, is its cost of production if produced by the buyer (or the merchandise) or a person related to the buyer. Accordingly, the value of an assist in this situation will be the cost of producing the assist as reflected on the books of the producer of the assist, so long as the records have been maintained in accordance with generally accepted accounting principles (GAAP).

In this case, the stamper could not have been brought to its completed condition without the particular music contained thereon. Without the music, the metal stamper would have been a plain stamper which could not be used in that condition in the manufacture of the imported phonograph records. Therefore, as these costs appear to be directly related to the production of the assist, in the absence of a showing to the contrary, we believe that the application of GAAP requires them to be included in the cost of producing the assist.

CLA-2:RR:CV
542519 TLL

TAA# 35

District Director of Customs
Detroit, Michigan 48226

Dear Sir:

This is in reply to a memorandum from your Director of Classification and Value Division dated June 17, 1981, concerning the amortization of assists.

Specifically, your office is concerned about the possibility of an importer amortizing the value of an assist for a given automotive part on a duty free entry. This question arises because vast numbers of vehicle parts are entered at Detroit under the Automotive Products Trade Act of 1965 (APTA) duty free. Parts may be entered free of duty under the APTA if, among other requirements, they are intended for use in the U.S. in the manufacture of motor-vehicles as defined in the Act. Parts not so intended, are dutiable. Therefore, it is a very common occurrence for a particular vehicle part to be entered duty free on one entry, and dutiable on the next. Further, parts entered duty free under the APTA, but diverted to use other than in the manufacture of motor-vehicles subsequent to importation, are to be reported to Customs and duty paid at the time of diversion.

You are concerned because of the possibility that based on previous rulings the importer could amortize all assists for a given part on a duty free entry. Then on subsequent dutiable entries no duties on the assists would be collected. Your office feels this is contrary to the legislative intent of both the Tariff Act of 1930 and the Trade Agreements Act of 1979, since the primary reason for a legal appraisement is so that merchandise subject to an ad valorem rate of duty would have the proper duties levied thereon. To collect duties on assists on some merchandise but not on other merchandise presents an anomaly in the law which the court in C.A.D. 109 did not contemplate.

Your present method requires that each importer, when he submits his assist data for a part, also submits an index volume for the part. This is the estimated service usage, and the estimated production usage (usage in the manufacture in the U.S. auto vehicles). This index volume is based on historic usage of similar parts and statistical models. Your office makes the projected service volume as a percentage of the total anticipated volume (usually 1% to 5%), applies it to the value of the assist, and amortizes this portion on one dutiable entry. This method of amortization, although correct,

542519

F12

appears to reasonably protect the revenue and at the same time fulfill the intent of the law. You feel this method should be continued.

In response to your inquiry, we agree with your conclusion that section 402, as amended by the Trade Agreements Act of 1979 (19U), does not contemplate apportioning the value of assist on a duty free importation. In this connection, the particular portion of the Statement of Administrative Action concerning the apportioning of assists, specifically approved by Congress, is quite relevant. Therein, it stated (See page 54 of the U.S. Customs Service Blue Book entitled Customs Valuation).

> Once a value has been determined for the assists described above, it is necessary to apportion that value to the imported merchandise. The apportionment of these elements will be made in a reasonable manner appropriate to the circumstances and in accordance with generally accepted accounting principles. The method of apportionment used will depend on the detail in the documentation provided by the importer to substantiate his requested method. For example, if the entire anticipated production using the assist is destined for exportation to the United States, the value might be apportioned over the first shipment if the importer wished to pay duty on the entire value at one time, over the number of units produced up to the time of the first shipment, or over the entire anticipated production. If the anticipated production using the assist is only partially destined for the United States, or if the assist is used in several countries, the method of apportionment to be used will depend upon the documentation provided by the importer to substantiate the requested method. Various possibilities for apportionment that are in accordance with generally accepted accounting principles exist. (emphasis added)

In our view the underlined clearly indicates, as we do rule, that there is no authority under the law to apportion the value of an assist on the first duty free entry. Of course, authority exists under the law to apportion the value of the assist on the first dutiable entry or any other method in accordance with generally accepted accounting principles.

542519

F13

In this regard, there is no authority under the TAA to require the importer, although he may so elect, to use the so-called "index volume" previously mentioned.

Sincerely,

(Signed) **Harvey B. Fox**

Re: Application for Further Review of Jacksonville Protest No. 1803-1-000011, [redacted]

Dear Sir:

This is in reference to the above-captioned matter, involving the importation of 30,000 electronic hand-held football games. The issues are as follows: (1) Whether the internal sale between the Hong Kong manufacturers and [redacted] is the sale for exportation to the United States for purposes of determining statutory export value; (2) Whether export value may be established by a lower wholesale quantity price of such or similar merchandise reflected by the manufacturer's sales to others for exportation to the United States during the period in question.

With regard to the first issue, the protestant points out the following: (1) The marks and numbers reflected on the invoices executed between [redacted] and the Hong Kong manufacturers were the same marks and numbers that were on cases of merchandise imported by [redacted], the importer [redacted] (2) The goods manufactured for [redacted] were packed in boxes marked with the model number plus [redacted]" and the Tampa address; (3) The payment terms of the transferable letter of credit transferred to the Hong Kong manufacturer indicated that payment was to be made at sight after the presentation of certain documents, among which were a Special Customs Invoice, and an on board bill of lading or airway bill showing consignment to [redacted] in Tampa; (4) [redacted] does not manufacture merchandise itself nor does it maintai ny inventory for sale; (5) The items were all marked by the manufacturer in English with the words "Made in Hong Kong" to comply with U.S. Customs marking requirements.

It is settled law that for statutory export value purposes a sale for exportation to the United States may be between a buyer and a seller within a foreign country. See R. J. Saunders & Co., Inc. v. United States, 42 CCPA 55, C.A.D. 570 (1954), and United States v. Getz Bros. & Co., 55 CCPA 11, C.A.D. 927 (1967). However, for an internal transaction to be considered a sale for exportation within the meaning of the statute, there must be an "effective control" ensuring that the merchandise will be exported to the United States. See Getz, supra.

G1

In Saunders, (decided under the old law) the Canadian manufacturer sold canned meat paste to its Canadian subsidiary who in turn sold the merchandise to the American importer. The manufacturer also sold the identical product to two Canadian firms, under the condition that these companies could not sell it for export. The merchandise was shipped direct from the manufacturer to the ultimate U.S. consignees. While the court found that the value of the merchandise reflected a proper export value, foreign value was used as the basis of appraisement since it was the higher price.

In Getz, the court found that the sale for exportation to the United States (under export value) was the internal sale between the plywood manufacturer and the Japanese trading house. There were a number of factors present in that case which convinced the court that the plywood was irrevocably destined for exportation to the United States. Among these factors were the following: (1) Most if not all of the plywood was sold to an American importer before it was manufactured; (2) The trading houses never placed orders with the mills until they received purchase orders from the U.S. importers; (3) The crates and panels were marked at mills with the U.S. importer's brand; (4) All of the mills sold the plywood f.o.b. Japanese port price; (5) There was a lack of domestic demand (in Japan) for the type of merchandise involved; (6) The mills making plywood for exportation had a production quota, while mills making plywood for domestic consumption had no such quota; (7) The mills were required to know a particular order was for exportation since they had to obtain a clearance from the Japanese Government involving shipments for exportation.

It is our view that the facts in the instant case parallel in relevant respects the situations in Getz and Saunders. Therefore, and in accord with the recommendation of our Miami and New York offices, we believe that the "sale for exportation to the United States" is the internal sale between the Hong Kong manufacturer and [redacted] since the evidence establishes that at that time the merchandise was "irrevocably destined" for exportation to the United States. As a result, the sale price between the Hong Kong manufacturer and [redacted] should be used for purposes of determining statutory export value.

Protestant alleges that identical or similar merchandise produced by the same manufacturers has been shipped to other U.S. importers in substantial quantities at lower prices than those sold to [redacted] prior to or on the date of export of the instant shipments. Protestant believes that these sales may be in wholesale quantities and thus represent statutory export value. Several manufacturers and importers are named, and protestant requests that Customs verify this information.

542595

62

Our Miami office points out that the protestant did not submit any price or sales information to enable consideration of usual wholesale quantities. Therefore, they recommend denial of this claim. We agree with this suggested action.

Under the circumstances, you are directed to dispose of the protest consistent with the foregoing.

Sincerely,

(Signed) Irving W. Smith, Jr.

Director, Classification and Value Division

Request for Ruling by [redacted] Valuation of Assist

L99645

This is in reference to your memorandum dated October 29, 1981, regarding the above-captioned matter.

ISSUE:

Whether the value of an assist produced by the ultimate purchaser of imported merchandise and furnished to the foreign assembler through the importer shall include an element for profit.

FACTS:

A, the inquirer, has entered into a contract with B, the importer of record, for the assembly and testing of certain core memory panes. The actual assembly and test operations are performed by C, B's wholly owned subsidiary in Hong Kong.

In performing these tests and assembly operations, C uses components, materials and equipment furnished free of charge by A through B. A does not contest that these furnished items are assists within the meaning of Section 402(b)(1)(A), Trade Agreements Act of 1979 (TAA), and dutiable under the computed value basis of appraisement. Shipments from C to B are ordinarily appraised under computed value.

G4

While most of the assists are purchased by A from unrelated third parties, some of the furnished components and materials are manufactured in-house in A's facilities in the United States.

PROBLEM:

While there is no disagreement as to the value of the purchased assists, i.e., A's cost of acquisition, it is your opinion that the value of the assists produced by A is A's cost of production plus a normal profit. On the other hand, A believes that the value of the assists manufactured in-house should be limited to their cost of production, and should not include an additional element for profit.

LAW AND ANALYSIS:

The Statement of Administrative Action, 1979, provides that in determining the value of assists, such as materials, components, etc., the following is applicable: If the assist was acquired by the importer from an unrelated seller, the value of the assist is the cost of acquiring it. If the assist was produced by the importer or person related to him, its value would be the cost of producing it. The value of the assist would include transportation costs to the place of production. (Emphasis added.) See also Section 152.103(d)(1), Customs Regulations.

In either case, the value of the assist is limited to its cost. While the unrelated seller in the above situation presumably makes a profit on the sale of the assist to the importer, the total price paid, which includes the seller's profit, is the importer's cost. We see no difference, for purposes of satisfying the intent of the statute, whether

542667

GS

it is a party other than the importer who produces and furnishes the assist. While in this instance the component is not produced by a "person related" to the importer, nor is there a cost of acquisition, statutory intent is nevertheless served by limiting the value of the assist to its cost of production. As we stated in TAA No. 33, dated June 22, 1981 (542324 DLS), "Profit is not a cost and it should not be added to the value of an assist."

512667

HOLDING:

The value of an assist produced by an unrelated ultimate purchaser of imported merchandise is limited to the purchaser's cost of production, in accordance with generally accepted accounting principles, where either the assist is furnished without cost through the importer to the foreign assembler, or is furnished directly to the assembler.

Furthermore, computed value cannot be disregarded as the proper basis of appraisement where sufficient information is available to establish the ultimate purchaser's cost of production for the subject assist.

(Signed) Irving W. Smith, Jr.

542873 IWS
TAA #44, Supplement #1

District Director of Customs
El Paso, Texas 79985

Director Classification & Value Division

TAA #44, Dutiability of Certain General Expenses
(IA 169/81, Control number 542658, LD82-0039)

542873

In reviewing TAA #44, it has come to our attention that there may be some confusion over the last paragraph of the ruling regarding the requirements of Section 402(e)(2)(B), Tariff Act of 1930, as amended by the Trade Agreements Act of 1979. Accordingly, please substitute the following paragraphs for the last paragraph of the ruling.

The question of whether the producer's profit and general expenses are consistent with the profit and general expenses usually reflected by producers in the country of exportation in sales of merchandise of the same class or kind is, of course, a question of fact which will vary depending on the particular point in issue. Our authority for rejecting figures relating to the producer's general expenses is clearly limited under section 402(e)(2)(B) of the TAA to those situations where such figures "are inconsistent with those usually reflected in sales of merchandise of the same class or kind (emphasis added)..." However, it may be entirely possible that certain expenses that heretofore may have been considered general expenses under previous law would continue to be treated as being dutiable under 402(e)(1)(B) if "usually reflected, ..." etc. For example, that portion of plant rental relating to the selling of merchandise of the same class or kind for exportation to the United States may properly be treated as being dutiable as "an amount" for profit and general expense if included in the producer's profit and general expenses.

However, if the absence of such expense from the producer's general expenses results in that producer's profit and general expenses being "inconsistent with those usually reflected in sales of merchandise of the same general class or kind", the actual profit and general expenses of that producer should be rejected and the usual profit and general expenses substituted therefor. There is no authority under the law to adjust the producer's actual general expenses.

DEPARTMENT OF THE TREASURY - U S CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

MAR 22 1983

CLA-2 CO:R:CV:V
542977 CW

Dear Sir:

Re: Application for Further Review of Protest No. 1001-1-007863

The above-referenced protest concerns the dutiability of a 5 percent "commission" and a 10 percent "handling charge" paid by the protestant (importer), Rosenthal-Netter, Inc., to Hongson Arts Company of Hong Kong in connection with the importation in 1979 of baskets and rattanware produced in the Peoples' Republic of China (hereinafter referred to as China). There is no dispute that the proper basis of appraisement is export value under section 402(b) of the Tariff Act of 1930, as amended by the Customs Simplification Act of 1956.

The protestant maintains that the 5 percent commission is not dutiable as it represents a bona fide buying commission. In support of its contention, protestant has submitted a copy of a buying agency agreement which it entered into in 1976 with the Hong Kong company and which is alleged to be in effect today. The protestant states that its transactions with the purported buying agent normally involve visits by a representative of the importer to various factories in China, accompanied by a representative of the Hong Kong company. When the importer's representative finds an item to his liking, he and the Hong Kong representative enter into negotiations with the seller "until terms are agreed upon by the parties." At that time, the Hong Kong representative places an order in his name with the Chinese producer. Upon their return to Hong Kong, the representative of the alleged buying agent assists the importer's representative in making out a purchase order to the Hong Kong company for the same merchandise which was previously ordered from the manufacturer.

In regard to the handling charges, protestant advises that all articles purchased from various producers in China are forwarded to the Hong Kong company where the packages are opened and the contents are inspected to determine if they are in conformance with specifications. Broken and non-conforming articles are discarded and all articles which are to be forwarded to the United States are labeled with the proper country of origin, fumigated, consolidated and containerized. For these services, the importer and Hong Kong company have orally agreed that the latter should be paid a 10 percent handling charge. Protestant contends that these charges are not dutiable "under any theory of Customs law" since they are incurred after the goods leave the producers' premises and at the behest and for the account of the United States importer, not the seller. Protestant claims that the holdings in C.S.D. 82-53, dated October 7, 1981 (control No. 542516) and C.S.D. 82-157, dated August 6, 1982 (control No. 542875) are in support of its contention that the handling charges are not part of dutiable value.

69

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

We note that between September of 1978 and May of 1981 the Customs Service conducted an investigation of the business relationship between the United States importer and the Hong Kong firm which resulted in the discovery that the former apparently had failed to declare the commissions and handling charges paid to the latter in connection with merchandise imported between 1976 and 1978. The completed Report of Investigation, dated May 6, 1981, indicates that the Hong Kong company in question was the seller of the imported merchandise and that, in fact, until June of 1978, United States companies could not purchase directly from China.

In the opinion of your office, the evidence establishes that the relationship between the United States importer and the Hong Kong company is that of buyer and seller rather than principal and agent and, as a result, the fees paid to the purported agent are dutiable as part of the total price paid for the merchandise.

Concerning C.S.D. 82-53 and 82-157, we believe that neither decision is applicable to the case under consideration here. First, these decisions involved a construction of the new valuation statute established by the Trade Agreements of 1979, while the prior valuation statute is controlling with respect to the instant case. Secondly, the above-cited decisions generally relate to a situation in which merchandise, purchased by a United States importer directly from a foreign manufacturer, is transshiped through a third country, although the country of manufacture is deemed to be the country of exportation. In contrast to that situation, the merchandise in the case before us is not purchased directly by the United States importer from the foreign producer and the intermediate country, not the country of origin, clearly is the country of exportation.

It is well established in Customs jurisprudence that no single factor is determinative in establishing the existence of bona fide buying agency relationship. The existence of such a relationship must be ascertained by examining all relevant factors and each case is governed by its own particular facts. The commissionaire performs the duties of an agent acting on behalf of its principal, the buyer: it may not act as an independent seller, nor as a representative of the manufacturer. United States v. Manhantan Novelty Corporation, 63 Cust. Ct. 699, A.R.D. 263 (1969). Where the relationship between the parties is that of buyer and seller rather than principal and agent, an item claimed to be a "buying commission" is not deductible from export value. B & W Wholesale Co., Inc. v. United States, 58 CCPA 92, C.A.D. 1010 (1971).

Although the evidence of record is conflicting as to the precise relationship between the importer and the Hong Kong company, we believe that, on balance, the evidence support a finding that the Hong Kong company was an independent seller of the subject merchandise. On the one hand, while the Court of International Trade has viewed a written buying agency agreement as tending to support the existence of a buying agency relationship (see

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G10

Dorco Imports v. United States, 67 Cust. Ct. 503, R.D. 11753 (1971)), such an agreement clearly is not sufficient, by itself, to prove that a commission paid by an importer constitutes a bona fide buying commission. In our view, the written agreement in question should not be accorded substantial evidentiary weight since at the time the agreement was entered into in 1976 United States companies were not permitted to purchased directly from companies in China. Thus, during that period, in order to acquire rattanware from Chinese producers, the importer had no alternative but to purchase from or through a third party. In this regard, it has been held that a buying agency relationship is indicated where a buyer could have dealt directly with the manufacturer but chose to seek the assistance of an intervening party. United States v. Alfred Kohlberg, Inc., 27 CCPA 223, C.A.D 88 (1940). Although at the time the merchandise subject to this protest was exported to the United States (1979), United States companies apparently could purchase directly from China, protestant has furnished no evidence nor made any claim that it, in fact, could have purchased directly from the Chinese manufacturers of this merchandise.

A consideration in support of the protest is protestant's contention, corroborated by the Report of Investigation, that a representative of the United States importer frequently accompanied a representative of the Hong Kong company to various factories in China and entered into negotiations with the manufacturers. The fact that an importer actually visited factories and participated in negotiations with the factory has been cited by the Court of International Trade as evidence of a buying agency relationship. United States v. Gitken Co., 46 Cust. Ct. 788, A.R.D. 132 (1961).

On the other hand, there is evidence that the Hong Kong firm received discounts from the Chinese suppliers which were not passed on to the United States importer. The fact that articles were sold to the Hong Kong company at lower unit prices than the unit prices which were charged by that firm to the United States importer for the same merchandise is a strong indication that the Hong Kong firm bought and sold for its own account. Additional evidence of this is found in the Report of Investigation which states that, on occasion, the United States importer has cancelled orders with the Hong Kong company after the latter firm has placed orders with Chinese producers, thereby leaving the Hong Kong company "with large inventories of merchandise." In our view, these actions are more indicative of a relationship between a buyer and seller than between a buyer and its buying agent.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

G11

In view of the foregoing, we find that the protestant has failed to establish by satisfactory competent proof that the amounts which it paid to the Hong Kong company represented fees paid to a bona fide buying agent, and that, therefore, both the "commission" and the "handling charge" were properly included in export value.

You are directed to deny the protest in full. Your file is returned.

Sincerely,

(Signed) Irving H. Smith, Jr.

MAR 20 1985

CLA-2 CO:R:CV:V
543463 MK

District Director of Customs
Miami, Florida 33131

Dear Sir:

Re: Application for Further Review of Protest No. 5201-4-000255, dated May 8, 1984

This protest was filed against your appraisement of several shipments of "grey" or "parallel" market Rolex watches. Transaction value is the agreed-upon basis of appraisement, at the price actually paid. However, the importer (Big Ben Corporation, Miami) contends that the duty computation should be based on the transaction value given for the separate parts of the watches as presented in the commercial or pro forma invoices, whereas you based your appraisement on the values contained in the Rolex, Switzerland, export price list.

The National Import Specialist advises that watches are dutiable under item 715.05, TSUS, at the rates applicable to the watch case, plus the rates applicable to the watch movements, as if such cases and movements had been imported separately. Additionally, the 18-K gold watch bracelets are separately dutiable under item 740.14, TSUS.

According to the National Import Specialist, the importer has provided value breakdowns that are erroneous in that they greatly exaggerate the value of the watch movements that are dutiable at a specific rate, which rate is independent of value. At the same time, the importer's breakdown minimizes the values on the watch cases and watch bracelets, which are dutiable at a compound rate (720.20), and an ad valorem rate (740.14), respectively. In doing so, the importer has minimized the duties.

The National Import Specialist also notes that classification is not at issue. The importer is objecting to the value breakdowns you used. He stresses that there is no change in the transaction value for the numerous Rolex watches entered by this and other importers over many entries.

He states that the appraisements are based on sufficient information - the value breakdowns provided in the Rolex, Switzerland, export price list, from which can be established the percentage of the total value for any given Rolex watch that is borne by the watch movement, case, and bracelet.

For example, for the Rolex 1803.8/8385.8 watch reported by your office on your CF 6431 of March 25, 1983, the importer provided a value breakdown which is 40 percent ($1,280) for the watch movements, 30 percent

G13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

($960) for the watch cases, and 30 percent ($960) for the watch bracelet. Based on the information available in the Rolex price list, the watch movement was appraised at $288 (9 percent), the watch case at $960 (30 percent, and the watch bracelet at $1952 (61 percent). The transaction value ($3200) for this watch was unchanged.

The National Import Specialist agrees with the breakdowns you used. We too agree that the Rolex export price list is the best source for determining the costs of the movement, case, and bracelet relative to each other, for any given model number.

Under the circumstances, you are directed to deny the protest in full. Please send the importer a copy of this decision with your notice of action on the protest. Your file is returned herewith.

Sincerely,

SUBJECT: Application for Further Review of Protest No. 1502-3-000001

The above-referenced protest, filed by the Washington International Insurance Company, a surety company, concerns the issuance of a formal demand on surety for payment of additional duties relating to certain jewelry imported from Italy by Mr. Nathan Shaffir, President of Acronite Corporation. Mr. Shaffir has been indicted in connection with the alleged undervaluation of the subject jewelry.

The protestant raises a number of issues, most of which appear to be the responsiblity of your office. Please include the following language concerning the valuation issue in your direct response to the District Director of Customs, Wilmington, North Carolina:

> The subject merchandise was appraised by the import specialist at the port of entry, Winston Salem, North Carolina, based on the closing price of gold on the London Gold Market on the date of purchase of the imported merchandise. The protestant contends that the "merchandise should have been appraised at the invoiced unit values or at values less than the liquidated values in accordance with the appropriate appraisement statutes and regulations."
>
> In our opinion, the method used by the import specialist in appraising the subject jewelry is appropriate and in accordance with section 402(f) of of the TAA. Section 402(f) provides that if the value of imported merchandise cannot be determined under the bases of appraisement provided for in subsections 402(b) through (e) of the TAA, the merchandise shall be

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A3

appraised on the basis of a value that is derived from the methods set forth in such subsection, with such methods being reasonably adjusted to the extent necessary to arrive at a value.

The protest file is attached.

SUBJECT: Dutiability of Warehousing and Insurance Charges; I.A. 6/85

This refers to your memorandum of December 14, 1984, with attachments, including a request for Internal Advice from counsel for Royal Zenith Corporation (the importer), concerning the dutiable status of warehousing and insurance charges accruing on certain printing presses manufactured in East Germany and sold to the importer by Polygraph-Export-Import (the seller), an East German company. The parties are not related.

Under the contract between the parties, the importer is required to buy a certain number of machines each year, which it does on a C.I.F. basis. If it does not have a customer for a particular machine by the time it is completed, the seller arranges for warehousing at its warehouse or at a third party warehouse.

The importer assumes all risks and ownership of the presses when they are warehoused, packed ready for export.

You advise that a recently completed audit disclosed that since 1976 transactions between the seller and the importer have involved separate payments, not disclosed to Customs, for storage and insurance. Prior to 1980 such payments would not have been considered dutiable since the presses were freely offered for sale or sold without those payments. However under transaction value (the agreed-upon basis of appraisement), the concerned Customs officers, as well as counsel, hold differing opinions as to the dutiable status of these charges.

You describe the payment procedure as follows:

> Payments for the merchandise - must be completed by 1 year from shipment or warehousing. In the case of stored machines, payments need not begin until they are shipped. Thereafter, payments are due in equal monthly installments, the full price to be paid by the end of the 1-year period.

543501

AS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Payments for storage - are due 30 days after invoicing. Charge are not billed until a press is released for shipment or after storage for 6 months.

Payment for insurance - billed as soon as machines are placed in storage and payable in 30 days. When storage is to be at a third-party warehouse, insurance payments are made to the seller.

You also advise that line items in the invoices for storage and insurance specifically identify each machine by type and order number, and demonstrate that both charges the importer pays are, in part, based upon the cost of the particular machine being stored.

Arguments for non-dutiability, advanced by some Customs officers and by counsel, note that the separate storage agreement has been the usual method of doing business since 1976. The importer assumes all risks and ownership of the presses when they are warehoused, packed ready for export. If a third party warehouse is used, or if the presses are stored by the seller, there are separate bills for storage and insurance; in neither case should they be part of transaction value, just as they are not part of value for the presses shipped immediately.

Counsel, noting that transaction value is the price paid or payable for merchandise when sold for export to the United States, contends the payments in question are not for machinery, but for an entirely different item, a service unrelated to the purchase of the goods for export.

He cites several rulings in support of this position:

1. TAA 143, which was concerned with the dutiability of interest charges, where we stated that a type of financing arrangement, fully documented as being separate from the import transaction, was not part the price actually paid or payable.

2. C.S.D. 82-167, in which certain costs of unloading, storage, and re-exporting transshipped goods were ruled non-dutiable.

3. TAA 149, where when goods were seaworthy packed, subsequent handling costs were not dutiable.

4. Headquarters rulings 542957 and 542026, where vacuum packing arranged for by the importer at his option, and occurring after the prior packing met standards for international shipment, were ruled to be non-dutiable.

543501

N6

[illegible] TO THE PUBLIC

Counsel believes these rulings show a "general sense" that costs for services rendered after goods are placed in condition for export should not be dutiable.

The National Import Specialist believes that the warehouse and storage charges the buyer pays separately to the seller form part of transaction value. The fact that identical presses shipped immediately would be appraised at a lower price is irrelevant under the transaction value definition, which looks to the price paid or payable not, as under prior law, to the price at which goods are sold or offered for sale.

He also distinguishes the cases counsel cited from the facts in this case. TAA #43 dealt with a transaction documented as being separate from the import transaction, whereas here the charges, being directly related to individual machines, are not separate from the import transaction. C.S.D. 82-157 concerned charges incurred subsequent to exportation, and were not paid to the seller. The rulings on vacuum packing concerned certain packing charges, whereas the charges in issue here are not packing charges.

In our opinion, the answer to the issue presented is found in section 402(b)(4)(A), which defines the term "price paid or payable" as:

> ...the total payment (whether direct or indirect, and exclusive of any costs, charges, or expenses incurred for transportation, insurance, and related services incident to the international shipment of the merchandise from the country of exportation to the place of importation in the United States) made, or to be made, for imported merchandise by the buyer to, or for the benefit of, the seller. (Emphasis added)

The charges in issue here are not "incidental to the international shipment of the merchandise." Both charges are incurred before the international shipment commences, and one charge, for insurance, is (at least in most cases) paid before exportation. Also, the importer purchases C.I.F., which basis would seem to encompass the charges in issue.

Accordingly, we conclude that the charges for storage and insurance paid to the seller are part of the price actually paid or payable, and dutiable under transaction value. Please send counsel a copy of this decision.

543501

JAN 17 1986

CLA-2 CO:R:CV:V
543567 FG

District Director of Customs
Buffalo, New York 14202

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0901-4-00513

This protest was filed against your decision in the liquidation of various shipments of precast concrete panels manufactured in Canada.

The protesting party is Beer Precast Concrete Ltd., the manufacturer and importer of the concrete panels. The protestant disputes Customs' decision to include certain repair costs and performance bond insurance premiums in the appraisement of merchandise under transaction value, pursuant to section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

In this case, the precast company involved made competitive bids for the right to manufacture and erect the precast concrete panels in question. A contract was subsequently entered into between the precast company and the United States buyer. Subcontractors were then hired by the precast company to install the panels. In the contract between the precast company and the buyer, a warranty provision which guarantees the material and workmanship was agreed to by the parties. As a condition of the bid acceptance, the buyer demanded the posting of a performance bond to insure the liability of the precast manufacturer.

We understand that it is not unusual for imported precast panels to be damaged during transportation, handling, storing or installation. Due to construction delays, it is common to store the panels at the construction site where the panels may be exposed to damage. Whenever possible, the damaged panels are repaired at the construction site. In connection with the shipments subject to this protest your office advises that repair cost invoices have been submitted which list the repairs performed as including panel refacing and washing and removal of paint, coffee, and pipe dope stains.

There is no dispute that the proper method of appraisement is transaction value pursuant to section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). However, the protesting party states that the performance bond insurance premiums and the cost of the repairs to the panels in the United States should not be

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A8

included in the price actually paid or payable for the imported merchandise. The following provision of 402(b) is cited in support of this contention: [402(b)(3)(A)(i)]

> The transaction value of imported merchandise does not include any of the following, if identified separately from the price actually paid or payable...:
>
> (A) Any reasonable cost that is incurred for —
> "(i) the construction, erection, assembly, or maintenance of, or the technical assistance provided with respect to the merchandise after its importation into the United States;...

With respect to the performance bond insurance premiums, the circumstances are such that it appears as if the premiums cover the entire precast contract. The performance bond insures the material and workmanship of the precast company, as well as the quality, condition and installation of the actual precast panels. The premiums cannot be apportioned to only a part of the contract, i.e., that which is covered by section 402(b)(3)(A)(i) of the TAA regarding the erection and assembly of the precast panel after importation into the United States. That provision of 402(b) requires the cost incurred to be identified separately from the price actually paid or payable.

The performance bond is required as a condition to the acceptance of the bid. The performance bond is analogous to a warranty provision, which Headquarters has in fact ruled is an integral part of the imported merchandise, and therefore, included in the price actually paid or payable. Customs has rejected the argument that a warranty is a charge for services performed subsequent to importation. See Headquarters Ruling No. 542699 BS, dated March 10, 1982, citing CRR Ruling 76-0072 (File 72-024488), dated July 15, 1976.

Therefore, it is our conclusion that the premiums for the performance bond are in fact dutiable. Although a portion of the premiums may relate to a reasonable cost incurred for the construction, erection or assembly of the merchandise after its importation, it is not identified separately which is required by section 402(b)(3).

The protesting party further claims that section 402(b)(3)(A)(i) provides for the deduction from the price actually paid or payable of the repair costs incurred for the merchandise after its importation into the United States. However, we note that the contract between the precast company and the United States buyer provides that the former "shall, without charge, replace any material and correct any workmanship found by the (buyer) not to conform to contract requirements..." (Emphasis added).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A9

543567

Therefore, since it appears that the repair costs incurred by the precast company are not included in the contract price, those costs may not be deducted from that price.

Accordingly, you are directed to deny the protest in full.

Sincerely,

(Signed) Harvey B. Fox

Robert L. Eisen, Esq.
Coudert Brothers
200 Park Avenue
New York, New York 10166

Dear Mr. Eisen:

This refers to your letter of July 1, 1985, requesting a ruling on behalf of De Dietrich (USA) (hereinafter, the licensee), that certain royalty payments it makes to its parent company, De Dietrich et Cie. (hereinafter, the licensor), are nonutiable.

You advise that the licensee has entered into a trademark license agreement with the licensor, a manufacturer of filters, dryers, tanks, and vessels for the chemical industry. The agreement designates the licensee as the exclusive North American importer and distributor of these products and authorizes the licensee to utilize the licensor's trademarks in connection with the domestic manufacture, sale, and distribution of the products. Under paragraph 3.1 of the agreement:

> Licensee shall pay to Licensor (as a condition of the use of the Trademarks and not as a condition of the sale of the Products for export to the United States) a percentage royalty (the "Royalty") equal to three percent (3 %) of the Net Sales Price of all Products sold by Licensee using any of the Trademarks during the term of this Agreement.

As you point out, the royalty payments are to be paid for the exclusive right to use licensor's trademarks in connection with the licensee's United States manufacture, sale, and distribution of the products in North America.

You cite several rulings (C.S.D. 83-99, C.S.D. 82-142, and others) in which, under virtually identical or similar circumstances we ruled that royalty and trademark payments made by a United States importer to its foreign parent/seller were nonutiable.

Transaction value, the probable basis of appraisement, provides for certain additions to the price actually paid or payable, including:

> Any royalty or license fee that the buyer is required to pay as a condition of the sale

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A''

Since the agreement specifically states that the royalty payments are not a condition of the sale of products to the licensee-importer, but are instead based upon subsequent sales in the United States of products bearing the licensor's trademark, we agree that they will be nondutiable under transaction value.

Sincerely,

(Signed) J. T. Roth

CLA-2 CO:R:CV:V
543585 ENS

Mr. Thomas C. Case
President
The Camelot Company
9865 West Leland Avenue
Schiller Park, Illinois 60176

26 AUG 1985

Dear Mr. Case:

Thank you for your correspondence dated July 16, 1985, concerning the dutiability of foreign inland freight. Specifically, you indicate that one of your clients enters into a transaction for the sale of merchandise from its Korean supplier (S), who loads a container at its inland facility and tenders it to the steamship company in Busan via its freight forwarder. The steamship company then transports the merchandise to the United States. The terms of sale to your client appear to be F.O.B. Busan.

Enclosed with your letter are an ocean bill of lading issued by the steamship company and a commercial invoice issued by S which itemizes the F.O.B. price into an ex factory price, inland freight and broker loading and other charges. Although not included with your correspondence, there is also a cartage ticket issued by the freight forwarder for transportation of the goods from the manufacturing facility to the dock. You ask whether presentation of the above documents is sufficient to permit nondutiable treatment for the foreign inland freight and other itemized charges.

One of the requirements in our amended regulation (19 CFR 152.103(a)(5)(iii)) for obtaining nondutiable treatment for foreign inland freight charges is the presentation to Customs of a through bill of lading. Because this term was not defined in the original regulation, and it was later determined that it was not being uniformly interpreted in many sectors of the importing community, on February 4, 1985, we issued instructions to our field personnel, a copy of which is enclosed, which, inter alia, defined the term as follows:

> A "through bill of lading" for these purposes is a contract, waybill, invoice, issued by one carrier or forwarder which controls the manner of shipment from the point or place of manufacture or origin to the U.S. port of importation or beyond (although the shipment may extend over two or more lines of connecting carriers), shows the origin and destination of the shipment, consignor and consignee, route of movement and applicable rate or rates.

A13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In the case of your client's transactions, it appears that a through bill of lading has not been made available, since two parties who issue two separate documents are responsible for portions of the shipment of the goods from the point or place of manufacture to the port of importation in the United States. Accordingly, under the facts presented the foreign inland freight and related charges would not be deductible from the price actually paid or payable for the goods. The same reasoning would apply to other forms of transportation, such as aircraft, about which you inquire.

The type of shipping document which will permit your client to take advantage of the new regulation is one which indicates that one shipper, carrier or freight forwarder is responsible for the entire shipment of the merchandise from the point of origin or manufacture to the port of importation in the United States. In this regard, you may wish to refer to the enclosed copy of additional instructions issued to our field personnel on July 16, which contain practical examples of situations where foreign inland freight will be dutiable and nondutiable.

Sincerely,

(Signed) J. T. Roth

SUBJECT: Domestic Value of Merchandise Seized from Emil Hatami d/b/a E&W Industries in El Paso District Case No. 84-2404-00810

The file in the above case was recently forwarded to us for our opinion concerning the domestic value of the merchandise involved. The relevant facts in the file indicate that the merchandise was originally sold from Richloom Fabrics to Great Neck Games at $31,143.65, and consigned to E&W Industries. Based on this transaction the petitioner claims that the domestic value of the goods does not exceed $31,143.65.

The El Paso District assigned a domestic value of $44,450 to the goods, calculated as follows:

$31,143.65	original sale price from Richloom to Great Neck
1,119.00	freight and storage from New York to El Paso
7,511.00	duty assessed on goods in El Paso when entered from Mexico
4,678.00	11.76% markup
$44,451.65	Total.

Title 19, United States Code, section 1606, requires that Customs determine the "domestic value" of seized merchandise, "at the time and place of appraisement." The relevant Customs regulation (19 CFR 162.43) defines "domestic value" as follows:

> The term "domestic value" as used therein [19 U.S.C. 1606] shall mean the price at which such or similar property is freely offered for sale at the time and place of appraisement, in the same quantity or quantities as seized, and in the ordinary course of trade....

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B1

Under the above regulation, if sales or offers for sale of such or similar merchandise exist in the domestic market, then these sales must be used for appraisement purposes, and resort may not be made under these circumstances to some alternative method of valuation, such as an estimate based on an assumed profit margin.

In the instant situation, subsequent to Headquarters receipt of the case and El Paso's initial domestic value appraisement for the merchandise, a member of my staff orally requested the import specialist concerned (Mr. Peter Rayon) to ascertain whether there was a wholesale market in El Paso for merchandise such or similar to that which was seized. Mr. Rayon agreed that is such a market existed, it would preclude the use of El Paso's original method of ascertaining the domestic value for the merchandise in issue. As the result of our request Mr. Rayon initiated several inquiries, which are detailed in Report of Investigation EP08CM467508 dated October 1, 1985 (copy attached), and which clearly support the conclusion that a wholesale market for merchandise similar to that which is under seizure currently exists in El Paso. More specifically, the El Paso District made three inquiries, two of which revealed that merchandise similar to that in question is freely offered for sale in El Paso at $4.00 per yard, and one of which revealed that similar merchandise is freely offered at $3.79 per yard. Utilizing the $3.79 price, at which it is assumed that a prudent buyer would purchase the goods, the correct domestic value for the merchandise is $48,301 (12,744.25 yards x $3.79).

NOV 04 1985

CLA-2 CO:R:CV:V
543623 CW

Mr. Arthur L. Litman
President
Castelazo & Associates
5420 West 104th Street
Los Angeles, California 90045

Dear Mr. Litman:

This is in response to your letter of August 28, 1985, in which you inquire as to the applicability of a ruling dated April 30, 1984 (543093), to a prospective transaction involving one of your clients. The referenced ruling involved an importer who furnished integrated circuits and similar components free of charge to Far East assemblers of video computer systems and related articles. The issue in that ruling was whether components which were rejected, scrapped or lost during the assembly process were assists under the definition of that term in section 402(h)(1)(A) of the Trade Agreements Act of 1979 (TAA). We concluded that components which are destroyed, scrapped or lost and which are not physically incorporated into the imported articles are not assists under the TAA.

You state that your client will be furnishing plastic in resin form to a foreign manufacturer free of charge. The resin will be used in a plastic injection molding machine to produce plastic products which will be imported into the United States. You ask whether the "value of the assist is based upon the actual amount of plastic resin used in the finished products or must reflect the yielded value including pro-rated waste, scrap, shrinkage and rejected items."

Section 402(h)(1)(A) defines assists as:

> ... any of the following if supplied directly or indirectly, and free of charge or at reduced cost, by the buyer of imported merchandise for use in connection with the production or the sale for export to the United States of the merchandise.
>
> (i) Materials, components, parts, and similar items incorporated in the imported merchandise.

B3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(ii) Tools, dies, molds, and similar items used in the production of the imported merchandise.

(iii) Merchandise consumed in the production of the imported merchandise.

(iv) Engineering, development, artwork, design work, and plans and sketches that are undertaken elsewhere than in the United States and are necessary for the production of the imported merchandise.

The components described in our April 30, 1984, ruling are included in the first category described above (subparagraph (A)(i)). In our opinion, plastic resin furnished free of charge to a foreign manufacturer by the importer of plastic products made from that resin also would be included in the first category to the extent that the resin is not consumed in the production of the finished products. Resin which is consumed during the production process would be included in the third category described above (subparagraph (A)(iii)).

Consequently, in conformance with the holding in our April 30, 1984, ruling, we conclude that plastic resin which is rejected, scrapped or lost during the production process, and which is not physically incorporated into the imported articles, would not constitute an assist under the TAA. However, resin which is consumed during the production of the plastic products would constitute an assist under section 402(h)(1)(A)(iii) of the TAA.

Sincerely,

(Signed) Harvey B. Fox

Area Director of Customs
New York Seaport
New York, New York 10048

FEB 4 1986

Dear Sir:

Re: Decision on Application for Further Review of Protest
No. 1001-3-000309

This protest was filed against your decision in the liquidation of various entries covering shipments of wooden jewelry boxes imported by London Leather Novelties, Inc., (hereinafter importer).

The importer is protesting Customs' decision to assess duty on alleged buying commissions paid to Alps International Corp. and Victradco Limited, both alleged buying agents of the importer. There is no dispute that the proper basis of appraisement is transaction value under section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

Transaction value is defined in section 402(b) as "the price actually paid or payable for the merchandise when sold for exportation to the United States," plus amounts for the items enumerated in section 402(b)(1). Buying commissions are not specifically included as one of the additions to the price paid or payable. The price paid or payable is more specifically defined in section 402(b)(4)(A) as:

> The total payment (whether direct or indirect...) made, or to be made, for imported merchandise by the buyer to, or for the benefit of, the seller.

In order to establish transaction value, it is essential that the identity of the seller as well as the amount paid or payable to him is established. As stated in Headquarters ruling 542141 EG (TAA #7), dated September 29, 1980, "...an invoice or other documentation from the actual foreign seller to the agent would be required to establish that the agent is not a seller and to determine the price actually paid or payable to the seller. Furthermore, the totality of the evidence must demonstrate that the purported agent is in fact a bona fide buying agent and not a selling agent or an independent seller."

Various invoices which are alleged to have been received directly from the manufacturer have been submitted by the importer. The importer deems these invoices to be determinative in demonstrating the relationship of the

BS

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

parties, i.e., the agent receiving a fixed commission from the importer for its activities and the manufacturers being the actual sellers of the imported merchandise. It is our conclusion from the circumstances and a review of the extensive interviews conducted by the Import Specialist that these invoices were not prepared by the manufacturers of the merchandise, but rather, were prepared by the alleged buying agents of the importer in order to meet Customs' criteria for a bona fide buying agent. Therefore, we believe that these invoices were not received by the importer directly from the manufacturers as alleged by the importer.

In addition, in determining whether a bona fide buying agency relationship exists between an importer and an alleged buying agent, the primary consideration is the right of the principal to control the agent's conduct with respect to the matters entrusted to the agent. B & W Wholesale Co., Inc. v. United States, 58 CCPA 92, C.A.D. 1010 (1971), Dorf International, Inc. et al. v. United States, 61 Cust. Ct. 604, A.R.D. 245 (1968). The alleged buying agent may not act as an independent seller, nor as a representative of the manufacturer or seller. In the instant case, we are not satisfied from the evidence presented that the importer exercises the requisite degree of control over the alleged buying agents so as to establish a bona fide buying agency relationship.

We conclude that the alleged buying commissions are part of "the price actually paid or payable for the merchandise when sold for exportation to the United States", and are, therefore, dutiable. You are directed to deny the protest in full.

A copy of this decision should be attached to the Form 19, Notice of Action, to be sent to the protestant.

Sincerely,

(Signed) Harvey B. Fox

B6

CLA-2 CO:R:CV:V
13 DEC 1985 543639 CW

Mr. Jacq Van Der Heyden
Deanna Marie
Ford End, Cheapside Lane
Denham, Bucks, UB9 5AB
United Kingdom

Dear Mr. Van Der Heyden:

This is in reference to your letter of October 11, 1985, in which you request advice concerning the classification and valuation of certain items which your company may import into the United States from various countries. You state that your company is presently engaged in England in manufacturing ladies garments which are sold directly to customers in that country. The garments are made of high quality fibers, such as wool, linen and silks, which are obtained from various countries including England, Germany, Italy, Austria, China and India.

You advise that your company is planning to expand its business to United States markets and, to that end, is considering the following three options:

1. A manufacturing company similar to the one operating in England would be established in the United States. Fabric (wool linen and silks) would be imported from one or more of the countries listed above.

2. Finished garments produced by your company in England would be sold to an unrelated company in the United States which would arrange for the marketing of the garments in the United States. The only remuneration your company would receive would be the sales price of the finished garments from the unrelated United States importer.

3. Finished garments produced by your company in England would be sold to a wholly-owned subsidiary in the United States, or some other related company, which would market the garments in the United States. You indicate that certain design costs in regard to the finished garments would be incurred by the related United States company.

B7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

You ask for the rates of duty applicable to wool, linen and silks imported from the countries listed above, and inquire as to whether there are any special duties or restrictions on the importation of these fabrics from the listed countries. You also ask for the duty rates applicable to finished garments imported from the United Kingdom and made of wool, linen and silk. Finally, you ask how the dutiable value of these items would be determined under each of the three options.

We regret that there is insufficient information in your letter concerning the articles to be imported for us to determine the classification and rates of duty applicable to these articles. This type of information may be obtained by following the instructions in the enclosed leaflet. Moreover, we are unable to provide you with information concerning the applicability of any restrictions to these items until a classification determination is made.

In regard to the valuation of the items to be imported, we wish to point out that the primary basis of appraisement under the valuation statute, section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), is transaction value, which generally is defined as the price actually paid or payable for the imported merchandise when sold for exportation to the United States, plus amounts for five specified items to the extent that they are not already included in that price. Thus, under option #1, the transaction value of the imported wool, linen and silks would be derived from the price that is actually paid by the importer of these fabrics. Similarly, under option #2, the transaction value of the imported finished garments would be derived from the price that is actually paid by the unrelated importer for the garments.

In regard to option #3, the fact that the importer and seller would be related is not in itself grounds for determining that the price actually paid does not represent an acceptable transaction value. Section 402(b)(2)(B) of the TAA sets forth two alternative methods of determining whether the transaction value in a related party transaction is acceptable. The first method involves an examination of the circumstances surrounding the sale to determine if the relationship influenced the price. If the relationship did not influence the price, the transaction value, if otherwise acceptable under the law, would be accepted. The second method involves a comparison of the transaction value with a series of test values. If the transaction value closely

543639

B8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

approximates any one of these test values, it will be accepted, assuming that it is otherwise acceptable under the law.

If it is determined in regard to option #3 that the transaction value between your company in England and the related company in the United States is acceptable, then that value would constitute the final dutiable value of the imported merchandise. Design costs incurred by the related importer in the United States would not be included in dutiable value, nor would any costs incurred by the importer in connection with the resale of the merchandise in the United States.

If the garments are not to be sold to the related United States importer but are to be consigned, for example, to the importer, then there would be no "price actually paid or payable for the merchandise when sold for exportation to the United States" (emphasis added) and, therefore, transaction value would be eliminated as the basis of appraisement. The next in order of precedence of the alternative bases of appraisement under the valuation statute is transaction value of identical or similar merchandise from the same country, section 402(c) of the TAA. If this basis of appraisement also cannot be determined, the merchandise would be appraised on the basis of deductive value, section 402(d) of the TAA, which essentially is the resale price of the merchandise in the United States with deductions for certain items. Those items include the usual general expenses and profit realized in connection with the resale of the merchandise in the United States, international and United States transportation costs, and the Customs duties payable on the merchandise.

If deductive value cannot be determined, the merchandise would be appraised on the basis of computed value, section 402(e) of the TAA, which consists of the sum of: (a) the cost or value of the materials, fabrication and other processing used in producing the merchandise; (b) the profit and general expenses realized by the producer; (c) the value of any assist; and (d) packing costs. We should note that the importer may elect at the time of entry to reverse the order of application of deductive value and computed value.

Generally speaking, regardless of the basis of appraisement which is used, design costs incurred by the United States importer in the United States, costs incurred by the

543639

B9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

importer in connection with the sale of the merchandise in the United States, and the importer's profit on the sale of the merchandise in the United States would not be included in dutiable value.

For your information, we have enclosed a copy of a publication entitled "Customs Valuation under the Trade Agreements Act of 1979."

Sincerely,

Re. Application for Further Review of Protest Nos.
3307-5-000003 and 3307-5-000005

Dear Sir:

The above-referenced protests concern the proper tariff classification of computer software imported together with IDA-XP protocol analyzers from Canada. Protest No. 3307-5-000005 also raises the issue of the proper appraised value of the subject merchandise.

As you know, the issues and merchandise involved in the above two protests are identical to those involved in Protest No. 3307-5-000004, which was the subject of Headquarters decision dated December 4, 1985 (543615), copy enclosed. Consequently, please dispose of the above-referenced two protests in accordance with our December 4, 1985, protest decision.

In regard to the appraisement issue, we stated in our December 4, 1985, decision letter that transaction value for the imported merchandise cannot be determined since, in our opinion, the related party price is not acceptable within the meaning of section 402(b)(2)(B) of the TAA. Therefore, we concluded that the merchandise should be appraised on the basis of the first of the alternative values that can be satisfactorily determined under section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). We wish to point out that there was insufficient information in the protest file for us to make a definitive determination regarding the proper basis of appraisement to be applied. However, based on the limited information available to us, it appears that the merchandise should properly be appraised on the basis of deductive value, section 402(d) of the TAA. If this is the case, we believe that the starting point in determining deductive value in this case would be the price paid by the ultimate purchasers in the United States to the United States subsidiary.

B11

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

From this price should be deducted the amounts described in section 402(d)(3)(A) of the TAA.

A copy of this letter and our decision letter of December 4, 1985, should be attached to the Form 19, Notice of Action, to be sent to the protestant. We are returning the original and one carbon copy of the Form 19 filed by the protestant in connection with each protest.

Sincerely,

(Signed) Harvey B. Fox

B12

DEC 10 1985

CLA-2 CO:R:CV:V
543655 BG

Mr. Patrick D. Gill, Esq.
Rode & Qualey
295 Madison Avenue
New York, New York 10017

Dear Mr. Gill:

This is in response to your letter of November 22, 1985, in which you request a binding ruling that certain quota charges will not be included in the transaction value of imported merchandise under section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

You state that your client (importer) requests its related buying agent in Hong Kong to purchase quota from unrelated third parties. The importer is invoiced for the quota charge which is incurred by the buying agent. You further indicate that in some cases, the related buying agent acquires permanent quota which is subsequently used to ship merchandise to the importer. The buying agent charges the importer for the quota at the prevailing market rate in Hong Kong. You state that in neither case is any part of the quota charge paid to the sellers of the merchandise who are unrelated to both the buying agent and the importer. It is your contention that none of these quota payments made by the importer constitute part of the dutiable value of the imported merchandise.

The relevant portion of section 402 provides for the following:

> (A) The term "price actually paid or payable" means the total payment (whether direct or indirect, and exclusive of any costs, charges, or expenses incurred for transportation, insurance, and related services incident to the international shipment of the merchandise from the country of exportation to the place of importation in the United States) made, or to be made, for the imported merchandise by the buyer to, or for the benefit of, the seller. Section 402(b)(4)(A).

In TAA No. 30 dated June 11, 1981, we ruled that where the buyer pays quota charges to an exporter who is unrelated to the foreign seller, and where such payments are not remitted in any way by the exporter to the seller, such charges are non-dutiable.

B13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

We agree with your conclusion that in the circumstances as you have described them, the quota charges paid by the importer to the buying agent are non-dutiable. This holding applies as long as these payments are not remitted in any way, directly or indirectly, by the buying agent to the seller of the goods. This ruling is based upon the facts as you have outlined them in your letter of November 22, 1985.

Sincerely,

(Signed) Harvey B. Fox

B14

JAN 2 1986

CLA-2 CO:F:CV:V
543656 EG

District Director of Customs
Seattle, Washington 98174

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3001-3-000287

This protest was filed against your decision on the liquidation of refrigerated reefer containers imported by Sea-land Corporation.

The protested merchandise is described as a KAT 6 series refrigerated container from Japan measuring 8 ft. x 8 ft. x 35 ft. A 2 or 3 ft. sq. hole is cut in one end of the container to accomodate a Thermo King (TK) refrigeration unit of U.S. origin. The file reflects that this unit is diesel or electric powered and has a combination motor/compressor, an evaporator, condenser, and fan. Each TK unit has both a heating and cooling coil, although the former is used only when the cooling coil ices over. The TK unit is used to blow air, ranging from - 20 degrees to +80 degrees F into the container box. The container has heavier insulation in its walls, roof, and floor than those designed for non-refrigerated service, and is not designed to allow heating or cooling liquids to circulate in its walls.

The subject container, with its TK unit, operated in international freight service from February 1979 until October 1982 when it was diverted to domestic service. It is at this point that the tariff classification of this unit must be established. The file indicates the subject container and TK unit were purchased together and were entered for consumption as a complete unit. It is our opinion that this combination is to be regarded for tariff purposes as an entirety and must be so classified. Note Lafayette Radio Electronics Corp. v. United States, 57 CCPA 62, 421 F.2d 751, C.A.D. 977 (1970), Chadwick-Miller Importers, Inc., et al. v. United States, 59 Cust. Ct. 529, C.D. 3221 (1967), and related cases.

The competing provisions at issue are item 640.30, TSUS, covering other containers of base metal chiefly used in the packing, transporting, or marketing of goods (temporarily free of duty under item 911.80), as urged by protestant, versus item 661.35, TSUS, covering refrigerators and refrigerating equipment, whether or not electric, and parts thereof, as liquidated. It is our opinion that item 640.30, TSUS, is precluded from consideration by virtue of Schedule 6, Part 3, Subpart A, Headnote 1(i), TSUS, which precludes from coverage within that item number containers with mechanical or thermal equipment such as agitators, heating or cooling coils, or electrical elements (provided for in parts 4 and 5 of Schedule 6). It is noted that certain hydraulic containers (those having coils in

c1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

the walls) were similarly precluded from item 640.30, TSUS, coverage by the same headnote, and placed in item 661.35, TSUS. See our letter of September 17, 1979 (057183), cited in the protest file.

As to the applicability of item 661.35, TSUS, which is a chief use provision, our decision of July 23, 1974 (033718), published as ORR Ruling 74-0239, correctly noted the common meaning of the term "refrigeration" as "the process of producing low temperatures usually throughout an appreciable volume." Moreover, the 1969 Summaries of Trade and Tariff Information, while not indicative of the legislative intent in enacting item 661.35, TSUS, reflect Customs handling of entries accepted under that item. Volume 8, Schedule 6 thereof, at p. 90, in discussing refrigerators and refrigerating equipment, whether or not electric, describes machines or assemblies of apparatus, which function in a continuous cycle of operations to produce and maintain temperatures ordinarily near or below freezing. These units normally comprise, among other things, a compressor (with or without motor) and condenser mounted on a common base, whether or not complete with evaporator, or self-contained absorption units.

The subject refrigerated container with TK refrigeration unit, in our opinion, is specifically provided for in item 661.35, TSUS. The protest should be denied as to classification.

The protestant is further disputing Customs' decision to appraise the subject merchandise on the basis of a 10-year depreciation schedule. It is argued that the merchandise should be depreciated over a 7-year period.

Headquarters has previously ruled on the protesting party's position in Ruling No. 542999 TLL, dated May 6, 1983. In that decision, Headquarters denied the protest and concluded that the merchandise was to be appraised over a 10-year period. It is from this decision that the protesting party is requesting reconsideration.

As addressed in our May 6, 1983, decision letter, protestant's argument regarding our 1978 settlement agreement which directed the use of a 7-year depreciation schedule is irrelevant for the matter under consideration. That decision was in regard to the settlement of a penalty claim, and has no binding effect on the appraisement of the imported merchandise.

The protesting party has not submitted any evidence which indicates that Customs' decision to depreciate the merchandise over a 10-year period is unreasonable. The 10-year period is reasonable and it accurately reflects an appraisement which approximates that of section 402(b), Tariff Act of 1930, as amended by the Trade Agreements Act of 1979. Your office has determined that the subject merchandise has a useful life of 10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C2

543656

years, and you have appraised the merchandise based upon this determination. In our view, the 10-year depreciation schedule for this merchandise is in accordance with generally accepted accounting principles. It is our conclusion that the 10-year depreciation schedule determined by your office is correct. Therefore, you should deny the protest with respect to the value issue as well.

A copy of this decision should be attached to the Form 19, Notice of Action, to be sent to the protestant.

Sincerely,

(Signed) Harvey B. Fox

C3

CIA-2 CO:R:CV:V
543662 BG

Mr. C. K. Murphy
Manager, Export and
Import Services
Union Carbide Corporation
2900 Westchester Avenue
Purchase, New York 10577

Dear Mr. Murphy:

This is in response to your letter of December 23, 1985, requesting advice on the valuation of Electrolytic Manganese Dioxide (EMD) imported by your company from Japan. You indicate that your agreement with the supplier stipulates that a certain quantity of the EMD will be purchased in a given year. If the actual purchases exceed the quantity stipulated in the agreement, then your company is entitled to a retroactive volume discount on the EMD purchased. This discount is calculated on a semi-annual basis.

You further indicate that when the EMD is imported, duty is paid on the full purchase price. The retroactive volume discount you refer to is not received until after the importation of the EMD. You are inquiring as to the feasibility of receiving a refund from Customs on the difference between the duty paid based upon the original purchase price at the time of importation and the adjusted purchase price after the volume discount is given subsequent to importation.

As you may know, the primary basis of appraisement pursuant to the Trade Agreements Act of 1979 (TAA), is transaction value. This is defined in section 402(b) of the Tariff Act of 1930, as amended by the TAA as "the price actually paid or payable for the merchandise when sold for exportation to the United States...".

The relevant portion of the TAA states the following:

> Any rebate of, or other decrease in, the price actually paid or payable that is made or otherwise effected between the buyer and seller after the date of importation of the merchandise into the United States shall be disregarded in determining the transaction value... section 402(b)(4)(B); (emphasis added)

C4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Therefore, the rebate, or deferred quantity discount, given by the foreign seller to your company cannot be considered in determining transaction value under section 402(b). The transaction value of the imported merchandise in this case is determined at the time of the importation.

Sincerely,

(Signed) J. T. Roth

JAN 9 1986

CLA-2 CO:R:CV:V
543665 CW

Mr. Phillip A. Aronoff
International Steel Corporation
P.O. Box 24534
Houston, Texas 77029

Dear Mr. Aronoff.

This is in response to your letter of December 30, 1985, in which you inquire concerning the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to small diameter steel reinforcing bars produced in Mexico from used railroad track.

You advise that your company exports used railroad track to steel mills in Mexico where the material is rerolled into small diameter reinforcing bars which are imported into the United States for further processing. You indicated by telephone that the further processing performed by your company in the United States consists of cutting the bars to length, bending and shaping the bars, and, in some cases, welding the bars together. As the bars will be imported in 40-foot lengths, cutting to length before use is required in most cases and bending is also often done before resale.

Item 806.30, TSUS, is applicable only to articles of metal (except precious metal) which are (1) manufactured in the United States or subjected to a process of manufacture in the United States, (2) exported for further processing, and (3) returned after such processing for further processing in the United States. Articles which satisfy these requirements are dutiable only upon the value of the processing outside the United States, assuming compliance with the applicable Customs Regulations. For purposes of this tariff provision, the term "further processing" has reference to processing that changes the shape of the metal or imparts new and different characteristics which become an integral part of the metal itself and which did not exist in the metal before processing.

Under the circumstances of this case, it is our opinion that the rerolling of the railroad tracks in Mexico satisfies the foreign processing portion of the statutory requirements. Moreover, we believe that the cutting of the reinforcing bars to length and the bending of the bars in the United States is sufficient to satisfy the domestic "further processing"

requirement. Therefore, we conclude that the imported bars are entitled to tariff treatment under item 806.30, TSUS, provided all requirements under section 10.9, Customs Regulations (copy enclosed), are met.

We suggest that you discuss the entire transaction with Customs personnel at the applicable port of entry to ensure that all requirements for item 806.30 treatment are satisfied.

Sincerely,

(Signed) RUSSELL X. ARNOLD

Mr. Chuck Ulrich
Gourmet Industries Inc.
Route 1, P.O. Box 43
Monon, Indiana 47959

Dear Mr. Ulrich:

This is in response to your letter of October 21, 1985, in which you request advice concerning the dutiable value and the rate of duty to be applied with respect to unpopped corn which your company imports from Canada.

You state that your company ships unpopped corn in bulk to a Canadian firm which packages the product in microwave bags and adds salt and oil. No specific information concerning the amount of salt and oil added to each bag has been provided. In regard to the value of the product, you state, as an example, that the Canadian firm pays $.20 per unit for the unpopped corn in bulk and sells the packaged product to your company for $.24 per unit.

The unpopped corn will probably be classified under the provision for edible preparations in item 183.05, Tariff Schedules of the United States, with duty at the rate of 10 percent ad valorem. For more definitive advice concerning the correct classification of the merchandise, please follow the instructions in the enclosed leaflet.

The imported bags of unpopped corn will most probably be valued on the basis of transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (19 U.S.C. 1401a(b)), which is generally defined as the price actually paid or payable for the imported merchandise when sold for exportation to the United States. Certain additions will be made to this price for items, such as packing costs, if these items are not already included in the price paid. In the example you provided, $.24 per unit would represent the price actually paid or payable for the imported packaged product.

Sincerely,

(Signed) Harvey B. Fox

Harvey B. Fox

Re: Protest Nos. 1303-3-000097 and 1303-3-000098 Filed by Rukert Marine Corporation

Dear Sir:

This is in reference to your memorandum of May 4, 1983, which forwarded the above-referenced protests to Headquarters in accordance with instructions contained in Headquarters telex 02212 dated March 20, 1982. The protests, filed by Rukert Marine Corporation, contest the assessment of dumping duties on shipments of synthetic methionine from Japan.

As you know, the protestant requested that no action be taken in regard to the protests until Headquarters had considered protestant's offer in compromise with respect to the additional duties owed. By letter of November 6, 1985, the Acting Chief Counsel advised counsel for the protestant that the Department of the Treasury had decided to reject the offer in compromise.

We note that the protestant has not applied for further review of the protests. Therefore, as the issue raised in the protests does not require a determination by the Office of Compliance, Department of Commerce, a decision with respect to the protests should be made by your office.

Sincerely,

(Signed) Harvey B. Fox

15 NOV 1984

CLA-2 CO:R:CV:V
553020 BNS

Paul D. Cullen, Esq.
Collier, Shannon, Rill & Scott
1055 Thomas Jefferson Street, NW.
Washington, D.C. 20007

Dear Mr. Cullen:

On September 19, 1983, you filed a petition with the Customs Service pursuant to section 516(a), Tariff Act of 1930, as amended (19 U.S.C. 1516(a)), on behalf of several domestic interested parties. The petition disputes Customs current classification of certain television apparatus imported from Mexico, under item 685.14, Tariff Schedules of the United States [TSUS].

This response, written pursuant to 19 U.S.C. 1516(c) and 19 CFR 175.22(b), is to notify you that we have reviewed your petition, additional comments of May 9, 1984, and all other submissions received as the result of our notice published in the Federal Register on January 26, 1984 (49 FR 3201) and have determined that the current tariff classification for the merchandise in question is correct. Our reasons for this determination appear below.

FACTS

Your petition indicates that since May of 1982, Matsushita Industrial Company [MIC] of Franklin Park, Illinois, has been importing color television picture tubes manufactured in Japan and initially shipped to its assembly facility in Mexico, Matsusnita Industrial de Baja California [MIBA]. Each picture tube is subsequently shipped to the United States together with a chassis and control panel which were assembled at the MIBA plant in Mexico. Following their arrival at MIC's plant in the U.S., the picture tube, and chassis and control panel assembled in Mexico are incorporated into completed television receiver sets produced in the U.S. The production of completed receiver sets requires the addition of a cabinet, a deflection yoke, speakers, in some instances a degaussing coil, and perhaps other miscellaneous parts. Additionally, you indicate that once assembled, the completed television receiver sets require extensive testing and adjustment prior to being sold for public consumption.

After the picture tubes leave Japan no manufacturing operations are performed on them until they reach the U.S. Rather, in Mexico the tubes, packed in their original Japanese shipping cartons, are loaded on trucks with equal numbers of completed chassis and control panels, and shipped to the U.S.

DISCUSSION OF ARGUMENTS

A. PRESIDENTIAL PROCLAMATIONS

The initial section of your petition contains a comprehensive history of items 685.11 - 685.14, TSUS. You conclude from this history that the President had no authority to amend the TSUS in 1979 to divide then item 685.20, TSUS, into items 685.11 - 685.14, TSUS. You indicate that since the President was without authority to change the TSUS, and there is no legal basis for the existing tariff classification of items 685.11 - 685.14, TSUS, "Customs must classify the imported articles described in this petition under their eo nomine designation, 'television apparatus, and parts thereof,' unless there exists a specific provision for a particular part, in which case General Headnote 10(ij), TSUS, should govern." Finally, you conclude that since a specific provision for picture tubes does exist (item 687.35, TSUS), the application of General Headnote 10(ij), TSUS, mandates the classification of the tubes in question thereunder.

Any agreement by us with the above argument would necessarily require a finding that the President was without authority to amend the TSUS. However, we are of the opinion that this office has no jurisdiction to make such a finding; therefore, we make no conclusions with respect to your initial argument. Our lack of jurisdiction in this area is supported by the absence of both specific and implied statutory authority confirming such jurisdiction, as well as by language contained in judicial decisions.[1] Likewise, your petition contains no citation supporting an opposite conclusion.

Additionally, under 19 U.S.C. 1516, a domestic interested party is permitted to contest only the appraised value, classification, and rate of duty of specific importations, and not the validity of a series of tariff provisions having no relevance to the classification of the merchandise in question. Therefore, even if we had authority to rule on the validity of the presidential proclamations in issue, our ruling under section 1516 would be limited to the applicability of that item under which the merchandise in question is currently being classified (item 685.14, TSUS), and would not specifically extend to the validity of the other tariff provisions contested in your petition (items 685.10, 685.11, and 685.13, TSUS).

B. CLASSIFICATION AS AN ASSEMBLY

The second portion of your petition argues in the alternative that notwithstanding the invalidity of the TSUS item numbers in question, Customs classification of the imported merchandise under item 685.14, TSUS, is incorrect. In this regard, in your additional remarks of May 9, 1984, you note that in our rulings on the subject merchandise and in the comments submitted as the result of our Federal Register notice, the subject merchandise has been variously described as a kit, an entirety, and an assembly. Additionally, you note that we have previously cited General Headnote 10(h), TSUS, as support for our classification under item 685.14, TSUS. In your opinion, the diversity of descriptions and rationales in support of classification under item 685.14, TSUS, reflects, "the confusion in current Customs practice and

---

1. Cf. United States Cane Sugar Refiners' Ass'n v. Block, 3 CIT 196, 201, 544 F. Supp. 883, 887 (1982), aff'd 69 CCPA 172, 683 F.2d 399 (1982), in which the court indicated that Customs "obviously" has no authority to override a presidential proclamation.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

compels the need for reassessment of that practice." Accordingly, we will briefly explain our classification.

Initially, we note that considerable discussion has been devoted to defining the items contained in the inferior heading which appears in the TSUS just prior to items 685.13 and 685.14. That heading reads:

> Assemblies (including kits containing all parts necessary for assembly into complete receivers)

Although we do not here decide whether the merchandise in question is a type of kit, clearly it is not a kit containing all parts necessary for assembly into complete receivers.[2] Additionally, it appears that the purpose of the kits provision in item 685.14, TSUS, is to make it clear that such kits were specifically intended to fall within that classification.[3] Finally, the presence of the kits provision in item 685.14, TSUS, supports the conclusion that at least some of the merchandise classifiable therein need not be physically fastened together, an allegation discussed in more detail later in this letter.

Having determined that the merchandise in question is not a kit of the type described in item 685.14, TSUS, we turn to the evidence and arguments which specifically support its classification therein as an assembly. Initially, when one analyzes the structure of items 685.11 through 685.18, TSUS, it is immediately apparent that the superior heading for television receivers and parts thereof contains two major subdivisions; items 685.11 - 685.14, TSUS, for television receivers and parts having a picture tube; and items 685.15 - 685.18, TSUS, for television receivers and parts not having a picture tube.

It is equally obvious to us that assuming the merchandise in question was imported without a picture tube, it would be classifiable under one of the inferior headings for television receivers and parts not having a picture tube, in items 685.15 - 685.18, TSUS. It is therefore illogical and inconsistent with the structure of the tariff schedule in question not to classify such merchandise with a picture tube under the provision for television receivers and parts having a picture tube, assemblies, in item 685.14, TSUS.

---

2. The term "complete," as it applies to items 685.11 through 685.19, TSUS, is defined in headnote 3(a), Part 5, Schedule 6, TSUS, as a receiver fully assembled, whether or not packaged or tested for distribution to the ultimate purchaser. Since the merchandise in question is not capable of being fully assembled into a television receiver, it does not fall within the specific provision for kits in item 685.14, TSUS. Additionally, we recognize that in our letter reconsidering Headquarters Ruling 067477 SC of September 24, 1981 (Headquarters Ruling 067670 SC, dated April 16, 1982), the merchandise was referred to and classified as a "kit" for a color television receiver. In this regard, the April 1982 ruling, which cited General Headnote 10(h), TSUS, as its basis, would have been more consistent with the language of the TSUS had it referred to the merchandise as an "assembly". This inadvertance was in all probability caused by the incoming memorandum from the San Diego District, which specifically used the word "kit" rather than "assembly".

3. In the absence of the specific kit provision in item 685.14, TSUS, such kits would be classifiable as complete receivers in item 685.11, TSUS, pursuant to General Headnote 10(h), TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In support of your proposed classification you have cited the definition for "assembly" which applies to items 720.70 - 720.86, TSUS. That definition, "two or more parts or pieces fastened together," is claimed as proof that the assemblies referred to in item 685.14, TSUS, must be physically fastened together. In this regard, we note that the definition for assemblies in schedule 7 of the TSUS contains specific language mandating that the assemblies contained therein be fastened together, while no such language appears in the assemblies provision contained in schedule 6, a fact supporting the conclusion that the assemblies in item 685.14, TSUS, are not limited to parts which are physically fastened together.

Additional evidence that item 685.14, TSUS, includes merchandise not physically fastened together is found in dictionary definitions for the word "assembly." Those definitions indicate that an assembly may be either a collection or assemblage of parts which are unassembled, or an article formed from the assembly of a collection or assemblage of unassembled parts.[4] Likewise, as previously stated, the inclusion of the specific kits provision in item 685.14, TSUS, also indicates that some merchandise classifiable therein need not be physically fastened together. Finally, information in our possession indicates that given current design standards, it would be virtually impossible to transport television assemblies composed of picture tubes, chassis and other parts physically fastened together, without an unacceptably large percentage of them being damaged. It also appears that since at least 1977 (when a statistical annotation for color television receivers having a picture tube, assemblies, first appeared in the TSUS), there have been no such assemblies designed which were capable of being shipped physically fastened together. Under the above circumstances, agreement with your conclusion that merchandise classifiable in item 685.14, TSUS (other than kits containing all parts necessary for assembly into complete receivers) must be physically fastened together would create an orphan tariff provision. Obviously, such a result was not intended by the provision's drafters. In conclusion, it is our opinion that item 685.14, TSUS, is an eo nomine provision which specifically applies to color television picture tubes imported together with other components and under which the merchandise in question is classifiable.

C. CLASSIFICATION AS AN UNFINISHED ARTICLE

Notwithstanding the above conclusion, you argue that the applicability of General Headnote 10(ij), TSUS, and the inapplicability of General Headnote 10(h), TSUS, and the doctrine of entireties mandate the separate classification of the picture tube, and the chassis and control panel in the merchandise in question. Initially, we emphasize our conclusion, previously discussed, that a discussion of the General Headnotes and the doctrine of entireties is unnecessary since the tariff provision in question (item 685.14, TSUS) clearly

---

4. The Random House Dictionary of the English Language, 89 (1973); Webster's New Collegiate Dictionary, 67 (1977); Webster's New World Dictionary, 83 (2nd College Ed. 1974); The American College Dictionary, 75 (1970).

C13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

provides for assemblies imported with a color television picture tube. However, we are also of the opinion that even in the absence of the specific language in item 685.14, TSUS, the merchandise in question would still be classifiable as an unfinished article under the eo nomine provision for television reception apparatus, and parts thereof which currently appears as part of the superior heading to item 685.14, TSUS. Therefore, an analysis of your argument appears below.

The two general headnotes which you cite provide as follows:

10. (h) unless the context requires otherwise, a tariff description for an article covers such article whether assembled or not assembled, and whether finished or not finished;

(ij) a provision for "parts" of an article covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such part.

Likewise, the doctrine of entireties and General Headnote 10(h), TSUS, have been described and discussed as follows:

> It often happens that merchandise consists of two or more components which are shipped together and are intended to be used together. They may or may not be physically joined together. The question arises as to whether the components are dutiable separately or whether they are to be considered an entirety for tariff purposes, dutiable as one complete article.
>
> In general, it may be said that an article will be regarded as an entirety when the components, upon being joined, form a new article which has a character or use different from that of any of the parts.... Conversely, where . . . the components retain their individual identities and are not subordinated to the identity of the combination, duty will be imposed on the individual entities of the combination as though they had been imported separately.[5]

Additionally:

> To a large extent, General Headnote 10(h) embodies the time-honored doctrine of "entireties." Under the doctrine of entireties unassembled parts or components are treated for tariff purposes as though they were assembled or combined at the time of importation, if the following conditions are present:
>
> (1) The parts or components must be designed or intended to be assembled or combined after importation into the article in question.

---

5. R. Sturm, A Manual of Customs Law 288-89 (1st ed. 1974).

C14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

(2) The parts or components must be packed separately (not commingled) in the same shipment for the same importer.

(3) The article, "constructively" assembled or combined into an entirety, must itself fall within the product description under consideration. That is, the "constructive" assembly or combining of the imported parts or components alone must produce an article to which the product description applies.

The leading case on the subject is Daisy - Heddon, Div. Victor Comptometer Corp. v. United States, 66 CCPA 97, C.A.D. 1228 (1979). * * * * Affirming the lower court, the Court of Customs and Patent Appeals held [in Daisy Heddon] that the imported articles were properly classified as fishing reels * * * * because the articles would have been substantially complete reels if imported in an assembled condition.

* * * *

The Daisy - Heddon decision listed the following factors that could appropriately be considered in determining whether an imported article was substantially complete:

(1) Comparison of the number of omitted parts with the number of included parts;

(2) Comparison of the time and effort required to complete the article with the time and effort required to place it in its imported condition;

(3) Comparison of the cost of the included parts with that of the omitted parts;

(4) The significance of the omitted parts to the overall functioning of the completed article; and

(5) Trade customs, i.e., whether the trade recognizes the importation as an unfinished article or merely as a part of that article.[6]

Initially, we conclude that the doctrine of entireties is not relevant to our determination in this case since it appears that the joining of the imported components does not form a new article having a character or use different from that of any of its parts. Rather, that which is important is the possibility that under General Headnote 10(h), TSUS, the imported components form an

---

6. P. Feller, U.S. Customs and International Trade Guide 56.05[2] (1984).

D1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

unfinished article. Therefore, applying the above headnotes and principles to the present situation the question essentially is whether, when constructively assembled, the merchandise in question is a type of television reception apparatus which is substantially complete.[7] For purposes of our analysis, we initially note that headnote 3(a), Part 5, Schedule 6, TSUS, provides as follows:

> 3. The provisions of this headnote apply to "television apparatus and parts thereof" provided for in items 685.11 through 685.19, inclusive, of this part.
> (a) The term "complete", as used to describe television receivers, means a television receiver, fully assembled, whether or not packaged or tested for distribution to the ultimate purchaser.

In our opinion the above headnote specifically proscribes the consideration of costs related to adjustment, testing and cabinetry in determining whether the merchandise in question is substantially complete. However, because the above headnote was inserted into the TSUS pursuant to Presidential Proclamation 4707, the validity of which you dispute, we will analyze the issues involved as if the headnote did not exist.

First, available evidence, including statements in a submission from counsel representing MIC, indicates that the articles in question, "are fully compatible with each other, and are used together in the same model color television receiver, which is completed by MIC in its Franklin Park, Illinois, facility."[8] Discussions with our field personnel confirm that the picture tubes, chassis, and control panels are capable of being used together. We assume in the absence of any allegation to the contrary in your submission that the above statements and findings are factually correct.

---

7. In footnote 7 on page 17 of your addendum to the original petition, you indicate that the application of the Daisy - Heddon criteria in this case is inappropriate because the imported merchandise is in need of further processing. Initially, we note that in Daisy - Heddon the court distinguished the situation there present from one where, "an article is incomplete because the material which comprises the article is in need of further processing" (emphasis added). In this regard, there has been no allegation in your petition that any of the materials comprising either the imported merchandise or a completed television receiver set needs further processing. Rather, the "processing" which you allege is necessary consists of adjustment and testing of a completed television receiver set. As discussed later in this letter, we have determined that such testing and adjustment costs are not intrinsically bound up with the manufacture of a completed article. Accordingly, because no constituent materials are in need of further processing and the costs referred to do not relate per se to the manufacture of the completed article, we are of the opinion that a Daisy - Heddon analysis is entirely appropriate for purposes of the instant discussion.

8. Submission on behalf of Matsushita Industrial Company at 8-9 (March 26, 1984).

B2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Additionally, available evidence, including statements from MIC's counsel[9] and information received from our field personnel, indicates that the chassis, control panels, and picture tubes are always packed separately, and imported and entered together, on the same vehicle, in equal numbers and for the same importer. It therefore appears that the second previously stated condition has been met in this case.

Turning to the constructive assembly test and the Daisy - Heddon criteria in particular, business confidential information submitted by MIC's counsel indicates that the number of parts needed to prepare the imported merchandise for sale to the ultimate consumer is small in comparison to the number of parts included in the imported merchandise. We note that your petition does not dispute the above conclusion.

Likewise, statistics supplied by MIC's counsel, and estimated figures in your petition, indicate that the cost of those components added in the United States is more than a de minimis portion of the total cost of all parts contained in a completed television receiver set. Nevertheless, the data also reveals that the major cost associated with those components which are added in the United States relates to the cabinet, which, in our opinion, is relatively insignificant to the overall functioning of the final product.[10] Accordingly, the cost of the components not included in the imported merchandise, and which are necessary for the completion of a finished television receiver set, is relatively small when compared to the cost of the components in the imported assemblies.

A comparison of the time and effort needed to place the entered merchandise in its imported condition to the time and effort necessary for the completion of a finished television receiver set in the United States initially requires us to ascertain those elements and processes which are necessary to convert the imported merchandise into a finished television receiver set. In this regard, you have included in your comparison amounts for adjustment and testing costs, but without breaking these costs out separately from amounts estimated for labor and factory overhead. In any event, you estimate that beteen 25 and 39 percent

---

9. Id. at 10.

10. In Yamaha International Corp. v. United States, Slip Op. 84-20 (March 9, 1984), the United States Court of International Trade indicated that an organ cabinet was not essential to the classification of certain imported components as an unfinished "electronic musical instrument" because Congress had specifically provided that that term encompassed all musical instruments in which the sound is generated electronically -- which can be satisfied without a cabinet. Similarly, in the instant case, Congress specifically provided for television "reception" apparatus in the superior heading to item 685.14, TSUS. Accordingly, although we acknowledge that a cabinet is necessary for a completed television receiver set to be marketed to the public, there has been no allegation, and we are aware of no evidence indicating, that a cabinet is related to the reception function provided for in the tariff schedules.

B3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

of the total value of a completed television receiver set is added in the United States, while making no estimate comparing the time necessary for the manufacture of the imported merchandise to the time necessary for completion of a television receiver set in the United States. You indicate that your inclusion of adjustment and testing costs in your estimate is justified because the record is unclear as to when and where the adjustments are conducted.

Although you claim it is unclear as to where and when the adjustments are made, MIC's counsel indicates that testing and adjustment is performed after the television receiver has been completed.[11] In the absence of contrary evidence, we are of the opinion that the above statement must be assumed correct. It therefore appears that such costs are not intrinsically bound up with the actual manufacture of a television receiver set, even though they may be necessary before a finished product can be marketed to the ultimate consumer. Accordingly, we are of the opinion that testing and adjustment costs are not properly part of the time and effort comparison set forth in Daisy - Heddon. Rather (when adjustment and testing costs are not included), the data in our possession indicates that the time and effort required to produce the imported merchandise substantially exceeds that necessary to convert the imported merchandise into a completed television receiver set.

Finally, neither your petition, nor any of the comments received as the result of our Federal Register notice, provides evidence concerning whether the industry in question recognizes the importation as an unfinished article or merely as a part of that article. However, there is evidence regarding the significance of the omitted parts to the overall functioning of the completed article. In this regard, we are of the opinion for the reasons stated below that the parts omitted from the imported merchandise are relatively insignificant to the overall function of a television receiver set.

Initially, we note that we have not located any judicial decisions defining the term "television receiver" or "television reception apparatus," or directly indicating that which is necessary for an imported article to be considered as an unfinished television receiver or television reception apparatus rather than as a part of a television receiver or television reception apparatus. In this regard, even the technical publications which we consulted[12] failed to define or discuss the term "television receiver" in a section or category related exclusively to that term. Rather, all of these technical sources mention or discuss television receivers in sections related to either radios or radio receivers,[13] and agree that all radio receivers perform three basic

---

11. Submission on behalf of Matsushita Industrial Company at 52-53, n. 31 (March 26, 1984).

12. Encyclopedia of Electronics and Computers, 690 (McGraw-Hill, 1984); 15 The New Encyclopaedia Britannica, 423 (1975); 23 The Encyclopedia Americana, 147 (International ed. 1980); Van Nostrand's Scientific Encyclopedia, 1477 (4th ed., 1968).

13. For example, the first two sentences of the Encyclopaedia Britannica article cited above, read as follows:

> The term radio covers the radiation and detection of signals propagated through space as electromagnetic waves to convey information. One of the chief branches of telecommunication, radio embraces wireless telegraphy, telephony, and television.

D4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

functions: selectivity, amplification, and detection. More particularly, one article[14] compares the differences between a radio receiver and a television receiver as follows:

> The development of television has led to extensions of the b.f. [beat frequency] principles involved in the usual radio receiver but has not required any radically different ones. The main difference between the sound receiver and the picture receiver is in the width of the bands which must be handled, television requiring a band several megacycles wide while sound requires only a few kilocycles. This means that the radio frequency channels must be capable of selecting between stations yet also pass very wide sidebands. In addition the amplification circuits after the detector (corresponding to the audio amplifiers of the sound set) must satisfactorily amplify over a range of a few million cycles.

Although, as previously mentioned, we are not aware of any judicial decisions defining "television receiver" or "television reception apparatus" for Customs purposes, or differentiating unfinished television receivers or television reception apparatus from parts of television receivers or television reception apparatus, there have been several decisions relating to unfinished radio receivers. In the most notable of the above cases, General Electric Co. v. United States, 2 CIT 84 (1981), aff'd 69 CCPA 166 (1982), at issue was the classification of certain radio chassis which, in their condition as imported, were not capable of use by the ultimate consumer, and which were to be combined with other components to produce various stereo components systems. Specifically, certain of the imported chassis were to be completed by the addition of a power transformer, a "jack pack," a power cord, certain internal wiring, a cabinet, knobs, a calibration scale, an 8-track tape player, a record changer, and speakers.

In ruling that the imported chassis were encompassed within the common meaning of the term "radio receiver," the court cited various definitions for the terms "radio" and "radio receiver" and articles discussing radio receivers,[15] and noted, in agreement with our findings, that none of the definitions or articles mentioned transformers, power cords, speakers, and cabinets as basic components of radio receivers. Specifically, the court noted that power transformers and power cords do not relate to radio reception per se: while with regard to the exclusion of speakers from the common meaning of "radio receiver," the court cited Symphonic Electronics Corp. v. United States, 77 Cust. Ct. 147, C.R.D. 76-5 (1976). In conclusion, the court found that the imported merchandise performed the basic functions of a radio receiver (selectivity, amplification, and detection), and that it was classifiable as an unfinished radio receiver pursuant to General Headnote 10(h), TSUS. In making

15. Cooke & Markus, Electronics & Nucleonics Dictionary, 380, 387 (McGraw-Hill, 1960); McGraw-Hill Encyclopedia of Science and Technology, 256 (Rev. 1966 ed.); 11 Encyclopaedia Britannica, 485-486 (1970 ed.); 19 Collier's Encyclopedia, 610-611 (1978); 23 Encyclopedia Americana, 121gg - 121hh (1973).

B5

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

the above determination, the court specifically cited Daisy-Heddon as authority for the proposition that classification of merchandise as an unfinished article pursuant to General Headnote 10(h) does not depend merely on the presence or absence of an essential part such as a power transformer and power cord.

We conclude from the technical authorities previously cited, and the General Electric decision and cases cited therein, that for customs purposes the basic function of a "television receiver" or "television reception apparatus" is to select, amplify, and detect particular radio waves. From information provided by Matsushita's counsel, and which is not contested in your petition, it appears that the imported merchandise is capable of performing the above reception function, as well as converting a demodulated television signal into light.[16]

Notwithstanding the ability of the imported merchandise to perform the basic reception functions of any television reception apparatus, you argue that the omission of certain parts (yoke, speakers, and degaussing coil) from the imported merchandise should preclude its classification as an unfinished article. While we recognize that these components are essential to the successful marketing of completed television receiver sets to the public, thus far the courts have not relied on or adopted an argument in similar cases making the classification of an article dependent on its ability to be marketable.[17]

We conclude from the above discussion that the imported merchandise performs the basic functions of a television receiver or television reception apparatus. Likewise, after taking into account all of the Daisy-Heddon criteria we conclude that the imported merchandise is an unfinished television receiver or television reception apparatus pursuant to General Headnote 10(h), TSUS.

D. SUBSTANTIAL TRANSFORMATION, CONTINGENCY OF DIVERSION, AND DUMPING

In addition to all of the arguments made in your petition and previously discussed, you indicate that the imported merchandise should not be classified as a single entity under item 685.14, TSUS, because it undergoes a substantial transformation in the United States to become finished color television receiver sets. Additionally, you indicate that the television picture tubes in question, which are originally produced in Japan, must be entered separately as articles produced in Japan through the application of the principle of contingency of

---

16. Submission on behalf of Matsushita Industrial Company at 10 (March 26, 1984).

17. While the Daisy - Heddon court stated that factors other than those specifically listed in its decision may be necessary to the resolution of a particular case, it noted in General Electric, for example, that the merchandise therein was not ready or capable of use by the ultimate consumer without further fabrication (2 CIT at 85) and refrained from relying on that fact in its decision.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B6

diversion.[18] Finally, you indicate that since the imported merchandise lacks a yoke, affirmation of our current classification would be inconsistent with certain antidumping findings listing those components necessarily contained in a television receiver.

Initially, we know of no doctrine which specifically precludes merchandise from being classified under either an eo nomine provision, such as item 685.14, TSUS, or as an unfinished article pursuant to General Headnote 10(h), TSUS, because it may be substantially transformed after importation into the United States. We do recognize that some principles involved in making a substantial transformation determination may be similar to criteria mentioned in the Daisy - Heddon case. However, Daisy - Heddon does not specifically mention substantial transformation and we do not here assume that the court in that case wished it as such to be a consideration. Accordingly, having already decided that the merchandise in question is properly classifiable under item 685.14, TSUS, either as an eo nomine article or as an unfinished article, the doctrine of substantial transformation is irrelevant to our determination.[19]

With regard to your contingency of diversion argument, it should be noted that 19 U.S.C. 1516 allows interested parties to contest only the "appraised value, classification, or rate of duty." In the instant case, our prior discussion of the issues involved led us to conclude that the imported merchandise was properly classifiable under item 685.14, TSUS, dutiable at 5 percent ad valorem. That determination was neither dependent on, nor affected by, either the country of origin or exportation of the merchandise involved. Likewise, even had we ruled that the chassis and control panels were classifiable separately from the picture tubes (which would then have been dutiable at 15 percent ad valorem), such determination would neither have depended on, nor been affected by, either the country of origin or exportation of the merchandise. Accordingly, to the extent that your petition addresses the country of origin of any of the merchandise involved in the present case, it is outside the areas specified by section 1516 (classification, value, rate of duty) as proper for a ruling.

Additionally, to the extent that your contingency of diversion argument was meant to support the notion that the merchandise in issue is not classifiable as an entity under either the eo nomine provision for assemblies in item 685.14, TSUS, or as an unfinished article pursuant to General Headnote

---

18. In the past, the doctrine of contingency of diversion has been used to ascertain the country of exportation for merchandise for appraisement purposes. Under the doctrine, "merchandise imported from one country, being the growth, production, or manufacture of another country, must be appraised at its value in the principal markets of the country from which immediately imported, unless it is shown that it was destined for the United States at the time of original shipment without any contingency of diversion." United States v. G. W. Sheldon & Co. (Damon Raike & Co.), 53 Treas. Dec. 34, 36, T.D. 42541 (1928).

19. In this regard, because we find the doctrine of substantial transformation irrelevant to our classification determination, there is no need to rule on whether such a transformation occurs in the United States, and we therefore refrain from so ruling.

B1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

10(h), TSUS, we have previously discussed all of the relevant classification issues involved. Indeed, we have been unable to find any citation indicating that contingency of diversion may affect the classification of merchandise.[20]

Finally, regarding the alleged inconsistency between our current classification and prior government determinations under the antidumping laws, our previous discussion should make it clear that under Daisy - Heddon the omission of an essential part (such as a yoke) does not preclude the application of General Headnote 10(h), TSUS. More importantly, Footnote 1 in your Exhibit 6, a memorandum authored by the Chief Counsel, U.S. Customs Service, specifically indicates:

> We note at this point that determinations of the "class or kind" of merchandise subject to a dumping finding under the Antidumping Act do not turn on the same issues as those presented when classifying merchandise under the Tariff Act of 1930.

The above conclusion is fully consistent with our ruling MFG 431.51 WR, 018022, dated June 15, 1972, a copy of which is enclosed, in which we indicated that television tubes and chassis imported in the same shipment were classifiable pursuant to General Headnote 10(h), TSUS, as television apparatus in item 685.20, TSUS. In the same letter, however, we specifically stated that: "The tariff classification of an article is not considered as determinative of the scope of an antidumping investigation." Accordingly, we reaffirm our previous decision that the principles involved in tariff classification under the Tariff Act of 1930 differ from those considerations involved in decisions under the antidumping laws; and that there is little if any relationship between the two.

HISTORY OF RULINGS

In addition to the foregoing, we would like to bring to your attention that Customs has a long and consistent history of ruling that merchandise similar to that here in question is classifiable either under item 685.14, TSUS, or its predecessor provision, item 685.20, TSUS; and that this history predates the rulings cited in your petition. We are therefore enclosing copies of the following decisions:

1. MFG 431.51 MA, 009050, dated February 3, 1971
2. MFG 431.51 WR, 018022, dated June 15, 1972

---

20. As noted on page 46 of your petition, contingency of diversion is used to determine the country of exportation for purposes of ascertaining export value when appraising merchandise. Likewise, under General Headnotes 3(a), 3(c) and 3(d), TSUS, we are required to ascertain whether merchandise was imported directly or indirectly from certain countries or insular possessions for purposes of ascertaining its dutiable status; however, such a determination is not involved in the instant case. Finally, because it is irrelevant to the classification of the merchandise in this case, we refrain from making any determination concerning a possible contingency of diversion for the picture tubes in question.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

3. CLA-2:R:CV:S L, 431.51, 029088, dated July 30, 1973
4. CLA-2:R:CV:MSP, 053119 SC, dated September 7, 1973
5. CLA-2 R:CV:MSP, 051204 SC, dated August 1, 1977.

Although your petition indicates that our most recent rulings may be somewhat confusing in their use of the words "kit," "entirety," and "assembly," all of the enclosed decisions clearly evidence a conclusion by Customs that the merchandise was an unfinished article classifiable as such pursuant to General Headnote 10(h), TSUS.

CONCLUSION

In summary, we conclude:

1. The U.S. Customs Service has no authority to rule on the legality of a presidential proclamation changing the wording of the tariff schedules. Rather, in performing our administrative ruling function, we must rely on whatever language is currently contained in the TSUS.

2. The merchandise here in issue is properly classifiable under the eo nomine provision for television receivers and parts thereof, having a picture tube, assemblies, color, in item 685.14, TSUS.

3. The merchandise here in issue is an unfinished article classifiable under the superior heading to item 685.14, TSUS, pursuant to General Headnote 10(h), TSUS.

4. The above ruling is consistent with and reaffirms a line of Customs rulings issued under item 685.20, TSUS, the predecessor provision to current item 685.14, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Cleveland, Ohio 44114

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 4110-3-000003, Dated May 6, 1983

The above-referenced protest was filed against the decisions in the liquidation of over 400 entries entered between 1978 and 1983. Said entries were liquidated on January 28, February 4, February 11, and February 18, 1983. Although the protest is dated according to the date it was received at the port of entry, a stamp on the face of the protest shows that it was first filed with your office, as the office whose decision was under protest, on April 27, 1983. Accordingly, the protest is considered timely filed within the time limits set forth in section 514 of the Tariff Act with respect to all entries covered by the protest.

ISSUES:

(1) Whether certain printed circuit board assemblies identified as part Nos. 16005256 and 16005285 are properly classifiable under the provision for solid-state (tubeless) radio receivers, designed for motor-vehicle installation, in item 685.21, TSUS (1983), or under the provision for radiobroadcasting reception apparatus, and parts thereof, other, other, other, in item 685.29, TSUS (1983).

(2) Whether certain printed circuit board assemblies identified as part Nos. 16000757, 16001249, 16001299, 16002962, 16008959, 16008964, 16011777, 16011778, 16016404, and 16020333 are properly classifiable under the provision for audio-frequency electric amplifiers in item 684.70, TSUS

B10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

(1983), or under the provision for machines not specially provided for, and parts thereof, in item 678.50, TSUS (1983), for part Nos. 16000757, 16001249, 16001299, 16011777, 16011778, and 16016404, and the provision for radiobroadcasting reception apparatus, and parts thereof, other, other, other, in item 685.29, TSUS (1983), for part Nos. 16002962, 16008959, 16008964, and 16020333.

FACTS:

The articles in question are printed circuit boards with various electronic components assembled onto them. These boards are used by the importer in the manufacture of radios and radio-tape players designed for installation into motor vehicles.

Two of the several types of boards (part Nos. 16005256 and 16005285), which are used to produce radios, contain all the circuitry and other apparatus needed to perform the amplification and detection functions for the radios into which they will be built. Additionally, those boards also contain some, but not all, of the circuitry and apparatus required by their respective radios to perform a selectivity function. In the final products, the remainder of the circuitry for performing the selectivity function is contained in an apparatus identified as a tuner assembly. The importer demonstrated that by soldering one of the imported boards to its corresponding tuner assembly, making a few relatively minor modifications, and connecting an antenna, a power supply, and a speaker thereto, AM and FM radio signals could be reproduced. However, the importer pointed out that in the actual production process, the tuner assembly is not soldered to the imported circuit board until that board has been assembled with many other pieces of the final product.

553024

B''

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Some of the remaining circuit boards (part Nos. 16002962, 16008959, 16008964, and 16020333) are incorporated into radios, while others (part Nos. 16000757, 16001249, 16001299, 16011777, 1601 78, and 16016404) are used in making radio-tape players. Each of these boards contains the circuitry and other apparatus for amplifying audio-frequency signals (audio amplifier), shaping the tone of the sound reproduced by the final article by attenuating the audio-frequency signals (tone control), adjusting the volume (volume control), apportioning the sound between the front and rear speakers (fader control), turning the radio or radio-tape player on and off (on/off switch), and connecting the completed unit to the vehicle's speakers, electrical system, and, on vehicles equipped with power antennas, the electric motor which raises and lowers the antenna mast (power harness). In addition, part No. 16002962 is equipped with a light bulb socket for a radio dial lamp, and part No. 16000757 is equipped with a pushbutton device located in its on/off switch for changing the tracks on the tapes used by an eight-track tape player.

553024

LAW AND ANALYSIS:

The importer maintains that the circuit boards identified as part Nos. 16005256 and 16005285 are parts of radiobroadcasting reception apparatus, and therefore are properly classifiable in item 685.29, TSUS (1983). However, TSUS General Headnote 10(h) provides that "unless the context requires otherwise, a tariff description for an article covers such article, ... whether finished or not finished." On that basis, Customs officers classified circuit boards 16005256 and 16005285 as unfinished solid-state (tubeless) radio receivers, designed for motor-vehicle installation, in item 685.21, TSUS (1983).

B12

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

Parts of an article may be classified as the unfinished article itself only when the imported pieces constitute a substantially complete article. Authentic Furniture Products, Inc. v. United States, 61 CCPA 5, 6, C.A.D. 1109, 486 F.2d 1062, 1063 (1973). In Daisy-Heddon, Div. Victor Comptometer Corp. v. United States, 66 CCPA 97, C.A.D. 1228, 600 F.2d 799 (1979), the court listed five factors that can be relevant in making a determination whether an article is substantially complete in a case such as this, where the article is incomplete due to the omission of one or more parts. Those factors are: (1) comparison of the number of omitted parts with the number of included parts; (2) comparison of the time and effort required to complete the article with the time and effort required to place it in its imported condition; (3) comparison of the cost of the included parts with that of the omitted parts; (4) the significance of the omitted parts to the overall functioning of the completed article; and (5) trade customs, i.e., whether the trade recognizes the importation as an unfinished article or merely as a part of the article. The court hastened to add that "[t]his list of factors is not exhaustive; it must be recognized that fewer than all of the above factors, or additional factors, may come into play depending on the particular importation. The outcome of each case will always depend on the particular merchandise involved." 66 CCPA at 102, 600 F.2d at 803.

Prior to examining the Daisy-Heddon factors in relation to the two imported circuit boards in question, an analysis of the tariff item covering the articles of which the boards are claimed to be unfinished versions is in order. Item 685.21, TSUS (1983), provides for solid-state (tubeless) radio receivers, designed for motor-vehicle installation. In

553024

B13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

the context of former item 685.24, TSUS, a radio receiver has been lexicographically and judicially defined as capable of performing three basic functions: selectivity, amplification, and detection. B & E Sales Co., Inc. v. United States, 9 CIT ____, Slip Op. 85-22 (Feb. 28, 1985); also see NEC America, Inc. v. United States, 8 CIT ____, Slip Op. 84-106 (Sept. 25, 1984), appeal docketed, No. 85-708 (Fed. Cir. Oct. 31, 1984); General Electric Co. v. United States, 2 CIT 84, 525 F. Supp. 1244 (1981), aff'd, 69 CCPA 166, 681 F.2d 785 (1982). Inasmuch as item 685.21, TSUS (1983), covers certain radio receivers by virtue of the same superior heading by which former item 685.24, TSUS, covered other radio receivers, the above definition of a radio receiver must apply equally to item 685.21, TSUS (1983), subject, of course, to the limitations imposed by the remainder of the language in that provision. With that in mind, we now examine the Daisy-Heddon criteria.

For purposes of making our examination, the importer submitted a chart comparing the imported circuit boards to the radio receivers into which they will be incorporated in terms of the first three Daisy-Heddon factors. That chart shows:

(1) It takes 0.39 hours to manufacture circuit board 16005285, which consists of 146 components costing a total of $12.54;

(2) It takes 0.84 hours and 300 additional components costing a total of $5.82 to produce radio receiver 16001700 from circuit board 16005285;

(3) It takes 0.40 hours to manufacture circuit board 16005256, which consists of 148 components costing a total of $12.61; and

(4) It takes 0.85 hours and 302 additional components costing a total of $6.95 to produce radio receiver 16001650 from circuit board 16005256.

553024

B14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

According to this information, two of the first three criteria listed in Daisy-Heddon indicate that the imported circuit boards should not be regarded as substantially complete radio receivers, for it takes roughly twice the number of parts and twice the time to complete the radio receivers as it does to produce the imported circuit boards. However, the parts figures include an unspecified number of components such as washers, studs, or screws whose purpose is merely to fasten other components together. Furthermore, although they number only about half of the remainder of the radio receiver parts, the circuit board parts cost approximately twice as much as the remaining parts needed to produce the radio receivers. Thus, the three statistical Daisy-Heddon criteria are in conflict on the substantial completeness issue in this case.

553024

The fourth Daisy-Heddon factor looks to the significance of the omitted parts to the overall functioning of the completed article. The imported boards perform two of the three functions by which a radio receiver is defined. Only about a third of the omitted parts participate in the selectivity of radio frequencies, according to information furnished by the importer. The rest of the omitted parts make the finished articles commercially practical for use as radio receivers in automobiles, but do not affect the way in which the finished articles function as radio receivers per se. In our estimation, then, the imported circuit boards would be considered substantially complete radio receivers judging by this criterion.

The last of the Daisy-Heddon factors concerns trade customs. In this regard, the importer submitted an affidavit from a Mr. Gerald M. LeRow, an electrical engineer with over 20 years' experience in the consumer and

E1

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

professional electronics industries. Mr. LeBow states in his affidavit that he does not believe that either of the circuit boards in question represents a substantially complete radio receiver. Noting that the circuit boards do not contain components to perform a selectivity function, Mr. LeBow concludes that:

> These missing essential circuit elements and the mechanical linkages for their operation are contained on a different circuit board not part of the 5256 or 5285 board in question. Which [sic] must be assembled to the 5256 or 5285 board in question in order to provide a substantially complete radio receiver.

Letter from Importer dated December 20, 1984, Exhibit D at 2. Thus, Mr. LeBow is basing his opinion on a criterion which has been described as the "essentiality" test, whereby the absence of a substantial or essential part precludes classification as the unfinished article itself. See Authentic Furniture, 61 CCPA at 7, 486 F.2d at 1064. However, Daisy-Heddon expressly rejected the use of that test to determine whether imported merchandise is classifiable as an unfinished article. 66 CCPA at 102, 600 F.2d at 802. Therefore, we cannot accord much weight to Mr. LeBow's opinion as reflected in his affidavit, which was the only documentary evidence submitted by the importer pertaining to the trade customs factor.

In General Electric, a case which is quite analogous to the situation at hand, the imported merchandise included three types of chassis which were capable of performing the basic functions of a radio receiver (i.e., selection, amplification, and detection of radio frequency) and were dedicated for use as the radio receiver portion of combination stereo systems. The plaintiff maintained that the chassis were not unfinished radio receivers because, inter alia, they were missing significant and substantial parts -- namely, a power transformer, a power cord, and

553024

E2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

loudspeakers -- without which the imports were inoperable as radio receivers. However, in its opinion, which was adopted on appeal by the Court of Customs and Patent Appeals as its own, the trial court, after reviewing various definitions of "radio receiver" as well as prior court cases, concluded:

> The several definitions of "radio receiver" cited by defendant disclose that the basic functions of a radio receiver are selectivity, amplification and detection, all of which are performed by the chassis in their condition as imported. The power transformers and power cords have no direct relationship to those basic functions and therefore no relationship to radio reception per se. Thus, it is obvious that the chassis are substantially complete radio receivers.

2 CIT at 90, 525 F. Supp. at 1246 (footnote omitted). Almost as an afterthought, the court added that an examination of the record in the case in terms of the Daisy-Heddon guidelines supported classification of the chassis as unfinished radio receivers.

It stands to reason that if a radio chassis which performs all three basic functions of a radio receiver is "obviously" a substantially complete radio receiver, then there can be an article which does not perform all three functions of a radio receiver but is nonetheless a substantially complete radio receiver, though not quite as clearly as if it performed all three radio receiver functions. We believe that circuit boards 16005256 and 16005285 are such articles. As noted earlier, those boards contain all the circuitry and other apparatus needed to perform two of the three basic functions of a radio receiver, and they also contain some of the circuitry and other apparatus required to perform the third radio receiver function. According to information furnished by the importer,

553024

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E3

84 percent of the component costs, 59 percent of the number of components, and 54 percent of the manufacturing time dedicated to producing the circuitry and other apparatus needed to perform the three basic radio receiver functions in the finished products are attributable to the imported circuit boards. Roughly two-thirds of the parts added after importation, like the power transformers and power cords in General Electric, have no direct relationship to the basic radio receiver functions and, therefore, no relationship to radio reception per se. Two of the four Daisy-Heddon factors for which persuasive evidence was submitted indicate that the circuit boards are substantially complete radio receivers, and one of those factors (i.e., significance of the omitted parts) is the major criterion that was used in General Electric. Based on all this, we conclude that circuit boards 16005256 and 16005285 are substantially complete radio receivers and, consequently, are classifiable as unfinished solid-state (tubeless) radio receivers, designed for motor-vehicle installation, in item 685.21, TSUS (1983).

As for the remaining circuit boards, the importer contends that the classification as audio-frequency electric amplifiers is incorrect because the articles in question are more than amplifiers by virtue of the several functions they perform in addition to amplifying audio-frequency signals.

Where an article is in character or function something other than as described by a specific statutory provision — either more limited or more diversified — and the difference is significant, it cannot find classification within such provision. It is said to be more than the article described in the statute. Dan-Dee Imports, Inc. v. United States, 7 CIT ____, Slip Op. 84-49 (Apr. 30, 1984); Robert Bosch Corp. v. United States,

553024

E4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

63 Cust. Ct. 96, 103, C.D. 3881 (1969). However, where the difference is in the nature of improvement or amplification and the essential character of the article is preserved or only incidentally altered, the applicable rule is than an unlimited eo nomine statutory designation includes all forms of the article in the absence of a contrary legislative intent or commercial designation. Dan-Dee Imports, supra; Robert Bosch, 63 Cust. Ct. at 104.

In order to determine if an article is more than that provided for in a particular tariff provision, it is necessary to ascertain the common meaning of the tariff provision and compare it with the merchandise in issue. E. Green & Son (New York), Inc. v. United States, 59 CCPA 31, 34, C.A.D. 1032, 450 F.2d 1396, 1398 (1971). In Customs Ruling CLA-2 CO:R:CV:S 061757 SC (Jan. 27, 1981), we noted that generally speaking, an audio-frequency amplifier is an electronic device used in an audio system to increase the strength of the signal output of other audio components such as tuners, microphones, phonographs, and tape players to the level desired or needed for operating that system. Audio-frequency amplifiers may consist of simple circuits, such as those inserted in portable phonographs, or they may be sophisticated systems that combine, control, and greatly amplify audio signals.

One of the general guidelines that have been used to determine whether audio amplifying equipment having functions in addition to amplification is classifiable under item 684.70, TSUS, as an audio-frequency electric amplifier is whether such or similar articles are bought, sold, and known in the trade as audio-frequency amplifiers. After all, as we observed in Customs Ruling 061757, if the term "audio-frequency electric amplifier" only encompassed articles that did nothing but increase the

553024

ES

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

amplitude of an audio signal, few, if any, of the articles commercially known as amplifiers would be classifiable under item 684.70, TSUS. Here, the nonamplifying features incorporated into each of the circuit board assemblies in question are tone control, volume control, fader control, an on/off switch, and a power harness. These features are also contained in many products which are bought, sold, and known in the trade as audio-frequency electric amplifiers. Consequently, the inclusion of these features in the imported circuit board assemblies does not make those assemblies more than audio-frequency electric amplifiers.

The addition of the light bulb socket for a radio dial lamp on part No. 16002962 and the incorporation of a pushbutton device to change tracks on eight-track tapes on part No. 16000757 do not make those articles more than audio-frequency amplifiers, either. Such additions are relatively insignificant and, at most, only incidentally alter the essential character of the imported merchandise. Thus, all of the remaining printed circuit board assemblies in question (i.e., those not classifiable as unfinished radio receivers) are classifiable under item 684.70, TSUS, as audio-frequency electric amplifiers.

553029

HOLDINGS:

(1) The printed circuit board assemblies identified as part Nos. 16005256 and 16005285 are classifiable under the provision for solid-state (tubeless) radio receivers, designed for motor-vehicle installation, in item 685.21, TSUS (1983).

(2) The printed circuit board assemblies identified as part Nos. 16000757, 16001249, 16001299, 16002962, 16008959, 16008964, 16011777, 16011778, 16016404, and 16020333 are classifiable under the provision for audio-frequency electric amplifiers in item 684.70, TSUS (1983).

E6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

The protest should be denied in full. A copy of this decision should be attached to your Form 19, Notice of Action, to be sent to the protestant.

Sincerely,

E7

JAN 0 2 1985

CLA-2 CO:R:CV:V
553146 EM

[redacted]

Dear [redacted]

In your letter of June 13, 1984, on behalf of [redacted] you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to a semi-circular plastic patch of self-adhesive plastic applied to the interior toe area of footwear uppers as reinforcement. This was the subject of a previous letter dated November 2, 1981, 067459.

A sample upper with the plastic patch attached was submitted. It was previously determined that no allowances could be made under item 807.00, TSUS, for the vamp components of the footwear uppers for the reason that molten thermoplastic material was deposited on the interior toe area of the vamp in a coated form rather than a solid patch component.

553146

In describing the specially designed feed mechanism of the process, melted plastic flows from the belt body into the applier body and deposits a layer of plastic of uniform thickness in a half-circle configuration on the box toe area of the workpiece. Different thicknesses may be obtained by making adjustments to the applier body and roll function of the process. The melted material is replaced in the applier at the same rate as it is dispensed.

In describing a transfer molding process as an assembly in Sigma Instruments, Inc. v. United States, Slip Op. 83-16, decided March 18, 1983, the plastic was in a transitory molten state, performed in a controlled operation that anticipated the rapid hardening of the plastic component before completion of the permanent joinder process. The molding compound had substantially assumed a definite solidification as to size and shape, and permanently fixed the subject terminals into their designed configuration and spacing so that the resulting headers could perform their intended function in an electrical relay system. The headers are different articles from the exported terminals alone, and result solely from the assembly of the terminals and plastic compound. The transfer molding process was determined to be an assembly of solids, comprised of the terminals and plastic base to form headers.

The plastic compound formed a substantial separate component that changed both terminals and plastic into a new and different article of commerce, described as headers, an assembly of different components.

E8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Similarly, in C. J. Tower & Sons of Buffalo, Inc. v. United States, C.D. 3840 (1969), imported film was composed of two plastic sheets, one of United States manufacture and the other of Canadian manufacture, with a bond in between to form a lamination. In both situations, the headers in one case and film in the other, different articles resulted from the assembly of respective components.

In the case at hand, however, as seen from the sample submitted, the layer of plastic is defined as little more than a transcribed coating process, as to shape and thickness, which merely changes the quality of the textile vamp, to give it the added characteristic of a reinforced box toe. The vamp remains the same except for the added reinforcement. Merely changing the exported component with the addition of a new property by a foreign process is not analogous to producing a new and different article by a foreign assembly of components.

In these circumstances, since the foreign process amounts to little more than a coating of plastic in a defined area, we remain of the opinion that the coating process performed on the exported vamp would preclude the vamp components from item 807.00 tariff treatment.

Sincerely,

(Signed) RUSSELL ARNOLD

DEPARTMENT OF THE TREASURY · U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

* U.S. GPO: 1981 417-788

DEC 11 1985

CLA-2 CO:R:CV:V
553657 EM

District Director of Customs
U.S. Customs Service
Patrick V. McNamara Bldg.
477 Michigan Avenue
Detroit, Michigan 48226-2528

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 3801-3-001960 dated September 15, 1983. The protest was filed against the decision in the liquidation of Entry Nos. 83-642081, et al., of October 19, 1982, et seq. All entries were liquidated on August 26 and August 19, 1983.

ISSUE:

The question raised concerns the applicability of item 806.20, Tariff Schedules of the United States (TSUS), to certain resistance welding electrode caps that were exported to Canada as parts of electric welding machines and coated with aluminum oxide.

FACTS:

Domestic-made welding tips, also referred to as resistance welding electrodes and copper forgings, were aluminum coated in Canada. The importer/protestant claims that the coated welding tips qualify as an alteration under item 806.20, TSUS, since the coating does not create a new and different article of commerce. The district director denies the applicability of item 806.20, TSUS, for the reason that the coating is a finishing step in the total manufacture leading to finished products.

LAW AND ANALYSIS:

Under item 806.20, TSUS, articles exported for repairs or alterations may be returned to the United States with duty assessed on the value of the repairs or alterations made abroad. However, this tariff provision

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

cannot be applied to a foreign process that goes beyond the contemplation of a repair or alteration performed on exported articles, as when a different product is returned from that which was exported, or when an unfinished manufactured product was exported for finishing.

In the circumstances described, if the welding tips had been used and were in need of an aluminum oxide coating, the recoated tips may be returned under item 806.20, TSUS. However, if the welding tips are newly manufactured products and the new tips are exported for coating as the last or finishing step in the manufacture of the welding tips, this goes beyond an alteration of an already finished product and the application of item 806.20, TSUS, would be precluded, especially in view of an importer's silence in the matter, or failure to produce contravening evidence. The tariff provision contemplates a repair or alteration of an already finished product and does not contemplate manufacturing or finishing operations performed abroad in order to obtain finished products ready for sale and their intended use upon return.

553657

CONCLUSION:

On the basis of the foregoing, you should deny the protest for item 806.20 tariff relief on the ground that the tariff provision cannot be used in the production of manufactured goods. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

(Signed) RUSSELL ARNOLD

Great Falls, Montana 59401

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 3304-3-000012 dated February 16, 1983. The protest was filed against the decision in the liquidation of Entry No. 82-313142, et al., of October 5, 1981, entered at the Port of Pembina, North Dakota. All four entries were liquidated on February 18, 1983.

ISSUE:

The question raised concerns the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to an imported Canadian truck on which domestic components were assembled while it was in the United States, before exportation to Canada for further assembly, and final return.

FACTS:

A Canadian-made Fracmaster (frac) Kenworth Pumper truck chassis used in oil-well drilling to determine the presence of certain gases, was imported into the United States and valued about $97,900 Canadian currency. Further equipment was assembled to the truck totaling $201,636 in the United States, including labor and a Cumins diesel engine and other parts made in England, valued at $95,900. The remaining parts installed included a transmission, radiator, support drive lines, an oil cooler, and hydraulic hoses.

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Before exportation to Canada, it is claimed that the vehicle comprised about 7[illegible] percent of a finished passenger unit, a special purpose vehicle. It was finished in Canada by installing an G.M.I. part and some additional items. G.M.I. parts are made in Canada with components of United States origin. The value of the part was about $[illegible],7[illegible]4 and contained about $[illegible],[illegible]7 worth of United States parts. Additional domestic components were added to the vehicle in Canada, which amounted to $[illegible],5[illegible], for a total of $[illegible],[illegible]2 United States parts contained in the vehicle in Canada. The vehicle was then returned to the United States in a knocked down condition as item 807.[illegible] treatment was claimed for the value of the domestic components.

The customs/treasury ruling [illegible] 807.[illegible] tariff treatment for all component parts of United States origin, including the imported Canadian [illegible] in a finished condition, on the basis of a resultant substantial transformation, it was determined, that the operation of final assembly into a special purpose vehicle. The district director ruled that 807.[illegible] duties are chargeable for the operation notwithstanding the fact that the final assembly of parts in the United States failed to change the identity of the special purpose vehicle upon exportation to Canada for completion.

[illegible]:

In order for an imported article to be considered a component of United States origin under item 807.[illegible], it must have been substantially transformed while in the United States by means of a manufacturing operation into a new and different article of commerce with a name, character, or use different from that previously possessed by the criminally imported article. In this case, the [illegible] in the United

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E13

553742

States on the imported pumper truck is not such a turnabout that results in a new and different article of commerce. Or, stated differently, was the work done in the United States (the intermediate country) sufficient to transform the truck after it left the country of origin and before it was imported into Canada? The Canadian-made truck comprised the essence of the article that was exported to Canada. The work done in the United States amounted to little more than adding finishing parts and equipment to the imported truck, to prepare and adapt it for final installation of the O.P.I. pumps.

Although the English diesel engines installed were claimed to be part of the pumping unit, the trucks were then exported to Canada where the final O.P.I. pumper parts were added and the trucks painted. The installation of the engines certainly did not change the identity since the intended use of the truck for a special purpose was already established and dedicated when the trucks were imported from Canada. The final conversion to a particular kind of special purpose vehicle was completed by installing the O.P.I. pumper as special equipment, which then marked each truck as a functioning special purpose vehicle.

Further, since an imported article is classifiable in that provision of the tariff schedules which most specifically describes it, whether assembled or not assembled, and whether finished or unfinished, the trucks were properly classifiable on importation into the United States under the appropriate tariff provisions therefor. See Headnote 1, Part 1 of Schedule 8, TSUS.

553742

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E14

In this view, the interim pass-through finishing preparations done in the United States are not considered sufficient to have transformed the Canadian truck into a domestic product, within the contemplation of item 807.00, TSUS.

CONCLUSION:

Accordingly, since the exported truck fails to meet the condition precedent of an American product for application of item 807.00, TSUS, you should deny the protest in full on the basis of the foregoing. A copy of this decision should be attached to your Form 19 Notice of Action, to be sent to the protestant.

Sincerely,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

JAN 14 1986

CLA-2 CO:R:CV:V
553794 IM

District Director of Customs
U.S. Customs Service
2039 Federal Office Bldg.
909 First Avenue
Seattle, Washington 98174

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 3004-5-000044 dated February 15, 1985. The protest was filed against the decision in the liquidation of Entry No. 708152 of November 14, 1984, filed at Blaine, Washington. The date of liquidation was December 28, 1984.

ISSUE:

The question raised concerns the applicability of item 860.30, Tariff Schedules of the United States (TSUS), to imported floor covering samples.

FACTS:

Sets of carpet samples, with holes punched in the fabric and destined for Anchorage, Alaska, were imported for use as sample fabric to assist customers in choosing merchandise from stock already available in this country. For this reason, the district director's position is that the samples are not eligible for free entry as samples under item 860.30, TSUS.

It is stated that in order to qualify for free entry under item 860.30, TSUS, the samples must be used to assist customers to choose merchandise of foreign origin. In effect, the question of the situs of the merchandise, either foreign or domestic, amounts to a critical element in the applicability of the tariff provision.

DOCUMENT MAY BE DISCLOSED TO THE

LAW AND ANALYSIS:

With respect to samples used in the United States for soliciting orders for foreign merchandise, item 860.30, TSUS, provides for the free entry of any sample valued not over $1 each, or marked, torn, perforated, or otherwise treated so that it is unsuitable for sale or for use otherwise than as a sample, to be used in the United States only for soliciting orders for products of foreign countries.

In United States v. London Records, Inc. (1968) C.A.D. 945, the court stated that the controlling factor is whether the importer uses the samples "only for soliciting orders" of foreign merchandise. The court found in this case that the sole motivating purpose behind the importation and distribution of the samples was the creation of a demand for future orders and the stimulation of sales of the foreign product. This was sufficient to warrant free entry. The controlling factor is whether the importer uses the samples for soliciting purchase orders for foreign merchandise. The purpose of the samples is the creation of demand for future orders and the stimulation of sales through exposure for public consumption.

With respect to stock merchandise imported and held at a convenient disposable level of distribution awaiting sale, so long as the sample floor coverings are used for the solicitation of orders to be supplied by foreign floor covering manufacturers, this conforms to the intent of the statute. The samples must be used for soliciting orders for foreign-made carpet, must represent the carpet to be ordered, and the carpet must have been produced in a foreign country.

Delivery of merchandise sold is predicated on a running inventory of readily available merchandise in keeping with common business practices. So long as the samples are used to create a demand for future orders of

DOCUMENT MAY BE RELEASED TO THE

553794

carpets from abroad, this should qualify the samples for free entry even though delivery is made from carpets already available in this country.

CONCLUSION:

Accordingly, if the sample floor coverings result in the solicitation of orders for carpet to be supplied by foreign carpet manufacturers by creating a demand for the carpets, and the samples represent the goods to be ordered, then the carpet samples should be regarded as samples used to solicit orders of foreign merchandise and entitled to free entry under item 860.30, TSUS. In the described circumstances, you should grant the protest for the relief requested under item 860.30, TSUS. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

(Signed) RUSSELL ARNOLD

F4

AUG 26 1985

CLA-2 CO:R:CV:V
553797 EM

Mr. Daniel M. Hazel
Materials Director
True Temper Sports, Inc.
871 Ridgeway Loop Road, Suite 201
Memphis, Tennessee 38119

Dear Mr. Hazel:

In your letter of August 12, 1985, you asked for information about the tariff status of golf shafts that have been exported to foreign customers and are now being returned to the United States as rejected merchandise.

You explained that the golf shafts have been made in the United States with imported steel and exported for sale in a series of numerous small shipments to foreign customers during a limited period of time. Rejected merchandise is then accumulated abroad over a longer period of time before being returned to the United States. The golf shafts are returned in the same condition as when they were exported and all are marked showing the United States as the country of origin.

Although no claims for drawback have been made on past exportations of the merchandise, you now propose to claim drawback refunds on future exportations of golf shafts.

Generally, American goods are returned free of duty under item 800.00, Tariff Schedules of the United States (TSUS), provided they were not advanced in value or improved in condition while abroad. However, articles that were exported with benefit of drawback are excluded from these free provisions for the reason that they were exported under claims of drawback. Under the drawback law (19 U.S.C. 1313(a)) the full amount of duties paid upon imported merchandise is refunded, less 1 percentum of such duties, upon the exportation of articles manufactured or produced in the United States with the use of imported merchandise.

However, since there is a general limitation expressed in the governing headnotes precluding free entry of articles under item 800.00, TSUS, that were exported with benefit of drawback, such articles may nevertheless be entered under item 804.20, TSUS, the stated exception to the exclusionary headnotes, upon repayment of the drawback of duties that were previously allowed under the drawback statute, and upon maintaining adequate records showing the amount of drawback allowed on specific shipments. Item 804.20, TSUS, is the express exception to the exclusionary drawback headnotes.

FS

DOCUMENT MAY BE RELEASED TO THE

So long as the identity of the golf shafts can be proven as American goods being returned, even though they were exported under the drawback statute, item 804.20, TSUS, need not be denied. While we would not approve any accounting system established as the sole basis for tracking the exported merchandise, we have no objection to any accurate method or other controls which ensure to the district director's satisfaction the return of the same articles that were previously exported with repayment of any drawback.

In the final analysis, and in accordance with the regulations, the question of whether any claim for 804.20 tariff relief is justified by the facts rests in the discretion of the area or district director of Customs.

Accordingly, dependent upon satisfactory proof showing that golf shafts were exported under drawback conditions, we are of the opinion that the rejected golf shafts may be returned to the United States under the provisions of item 804.20, TSUS, upon repayment of any drawback allowed.

Sincerely,

(Signed) RUSSELL X. ARNOLD

District Director of Customs
U.S. Customs Service
Post Office Building
Pembina, North Dakota 58271

JAN 14 1986

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 3304-3-000027 dated May 16, 1983. The protest was filed against the decision in the liquidation of Entry No. 79-101729 of November 8, 1978, entered at Sweetgrass, Montana. The entry was liquidated on April 1, 1983.

ISSUE:

The question raised concerns the tariff status of an International Harvester Company model 4070 truck upon which was mounted a mobile nitrogen converter, which was exported to Canada.

FACTS:

An IHC truck vehicle worth about $32,500, upon which was mounted a mobile nitrogen converter with a volume of 140,000 standard cubic feet and worth about $131,000, was exported to Canada in January 1979, for oilfield service. The vehicle was made in the United States in 1974 and was exported as a complete working unit.

Further work was carried out in Canada, consisting of a list of some 27 described further operations performed on the unit at the same time, pursuant to conditions for safety and convenience, as well as claimed running repairs. The vehicle was returned on November 8, 1979, and free entry was claimed under item 800.00, Tariff Schedules of the United States (TSUS). A shipper's Statement in lieu of a Certificate of Inspection on a CF 3311 was filed. Since there had been frequent importations of

F1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

mobile nitrogen converters by the same importer (Dresser Industries), further evidence of United States origin was requested on a CF 28. It was later explained through the Customs broker (Norman G. Jensen) that the vehicle did not qualify as American goods returned as its assembly operations had been completed in Canada.

LAW AND ANALYSIS:

Item 800.00, TSUS, provides for the free entry of American goods that have not been advanced in value or improved in condition while abroad.

Since the further work carried out in Canada was performed at the same time, such extensive work can hardly be referred to as running repairs. For this reason, the vehicle is considered to have been advanced in value and condition while abroad, beyond the contemplation of item 800.00, TSUS.

It was further claimed that the assembly operations carried out in Canada should qualify the returning vehicle under item 807.00, TSUS. However, the exported vehicle was an already assembled article when it was exported. As stated in Southern Air Transport, Inc. v. United States, C.D. 4836, the vehicle itself was never assembled abroad from fabricated components of United States origin, since it was an already assembled article when exported. Further, an already-assembled article such as the described vehicle cannot be considered a fabricated component under the tariff provision.

553818

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

CONCLUSION:

Accordingly, neither item 800.00 nor 807.00, TSUS, is applicable to the imported vehicle unit. You should deny the protest. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,
(Signed) RUSSELL ARNOLD

DEC 17 1985

CLA-2 CO:R:CV:V
553829 EM

David O. Elliott, Esq.
Barnes, Richardson & Colburn
Attorneys & Counsellors at Law
475 Park Avenue South
New York, New York 10016

Dear Mr. Elliott:

In your letter of June 10, 1985, on behalf of the Norton Company, you asked about the applicability of item 806.20, Tariff Schedules of the United States (TSUS), to certain abrasive grinding wheels that will be exported to Mexico for the purpose of "coring out" smaller size abrasive wheels which will be returned to the United States.

Smaller size abrasive wheels will be "cored out" in Mexico from larger exported abrasive wheels. It is proposed to export wheel blanks measuring up to 20 5/8 in. in diameter. The foreign operation will consist, as described, of "coring out" smaller size wheels ranging from 1 to 5 in. in diameter, using a diamond core drill that is similar to a hole saw. Center holes will be reamed out in the center of the resulting smaller wheels, using a drill press. The smaller abrasive wheels will be inspected and appropriately marked with wheel specifications, safety warnings, country of origin, etc., and packed for return to the United States.

Item 806.20, TSUS, provides for a duty upon the value of the repairs or alterations made on articles sent abroad for that purpose. The application of this tariff provision is precluded in circumstances where the operations performed abroad would result in new or commercially different articles, different in name, characteristics or use from that which was exported, or where the manufacturing process is continued on in the foreign operations.

Although it is stated that a series of smaller wheels are reamed out of larger exported wheels and abrasive wheels are both exported and returned, but in different sizes and adaptable for different uses, we believe that the foreign operation is a process that leads to the manufacture of smaller wheels, contrary to the requirements of the tariff provision. The cutting out of usable sizes of abrasive wheels from larger wheels together with reaming center holes constitutes a fabricating step in the manufacture of the imported smaller abrasive wheels. The foreign process of converting large wheels to finished usable smaller sizes is a fabrication that goes beyond the meaning of the term "alterations" under item 806.20, TSUS. What went out as a semi-finished product was returned as a completely finished component ready for use. Cutting little ones out of big ones creates new articles of commerce that had no prior existence.

FIO

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Accordingly, the imported small abrasive wheels would be precluded from classification under item 806.20.

Sincerely,

553832 EM

Luis Chavez, Esq.
Kemp, Smith, Duncan & Hammond, P.C.
Attorney at Law
Post Office Drawer 2800
El Paso, Texas 79999

Dear Mr. Chavez:

In your letter of August 19, 1985, on behalf of C-E Tyler, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to a certain article referred to as a Rotap testing sieve shaker, which is proposed for assembly in Mexico from component parts of United States origin.

An assembly description and accompanying photographs were submitted. The Rotap device produces a circular and tapping motion for use in testing laboratories or wherever analysis by sieve separation of materials is required. The list of components include, among others, rotap bases, pedestals, blocks, several kinds of metal plate, couplings, grommets, bearings, bushings, and electric motor and sprockets, timing belt, and several kinds of lock nuts and screws.

The assembly process is described in terms of a series of some ten operations, ranging through the assembly of the rotap bases, pedestals and blocks, painting the metal for protection, installing the main shaft and bearings, the guide blocks and carrying plates, installing the timer with knob and dial, and mounting the motor and sprockets to the rotap base and electrical wiring. The final operations consists of assembling the cam gear and bushing and placing a rubber channel around the base of the device in preparation for lubrication, testing, and final sealing of the unit within a shipping carton for return to the United States.

With respect to foreign assembly operations, item 807.00, TSUS, applies only to fabricated United States components that are designed to be fitted together in an assembly process, with no operations performed thereon except the attachment of the components to form the imported articles and operations incidental thereto.

On the basis of the described operations and photographs, allowances may be made under item 807.00, TSUS, for all components parts making up the device, that are of United States origin.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

With respect to marking, in the case where the components assembled are of United States origin the imported assembly may be marked "Assembled with U.S. Components in Mexico" and in case the assembly consists of Mexican components, it should be marked "Made in Mexico."

OCT 17 1985

CLA-2 CO:R:CV:V
553833 EM

S. Richard Shostak
Stein Shostak Shostak & O'Hara, P.C.
3580 Wilshire Boulevard
Los Angeles, California 90010-2597

Dear Mr. Shostak:

In your letter of September 20, 1985, on behalf of Brown Jordan Company, you asked for a review of the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to certain outdoor casual furniture made in Mexico from domestic aluminum tubing exported in 20-30 ft. lengths for that purpose. This was the subject of a previous letter dated May 24, 1985, under file No. 553630.

Because the exported tubing would be cut, formed, drilled, welded, and ground for assembly into the described furniture, it was determined in the previous letter that this processing satisfied only the foreign segment of item 806.30, TSUS. Upon return to the United States, the furniture would be sanded before applying a chromate conversion coating, dried, electrostatically painted with powdered paint, and again baked in order to fuse the powder to the metal. On the basis that sanding, coating, and painting, were not considered sufficient to satisfy the domestic segment of the processing cycle, it was determined that item 806.30, TSUS, was inapplicable.

It is stated in the present letter that, upon return of the furniture to the United States, it is sanded, processed in a chromate conversion washer, oven dried, painted with a powder coating, baked in an oven, and then finished by assembly with cushions, pads, or textile or plastic support material. Sample lengths of tubing were submitted to show the condition of the metal tubing as imported, its condition both after sanding and after the chromate conversion and before powder coating.

Despite slight differences in the appearances of the samples, it is stated in the accompanying literature submitted that chemical conversion coatings are intended to provide corrosion prevention when metal is left unpainted as well as to improve adhesion of finish paint applied to aluminum and its alloys. It is also stated that unpainted chromate conversion coatings will commence losing corrosion resistance properties and are readily removed if exposed to high temperatures, drying, or severe wear or erosion.

In order to meet the requirements of "further processing," some operation must be applied to the metal that will change its shape or form or impart new and different characteristics, which become an integral part

F14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

of the metal itself. The term also refers to a manufacturing process that looks toward the completion of the imported metal by operations other than those incidental to using it for the purpose intended.

However, it appears that some further act of processing the metal furniture other than sanding and applying chemical coatings which provide corrosion protection, must be undertaken in order to comply with the domestic processing requirement. Cleaning and coating or painting with corrosion preventatives do not constitute an acceptable processing of the metal under the statute.

Accordingly, since both processing segments must be met for compliance with the statute, we remain of the opinion that the requirement of further processing upon return to the United States is not considered to have been complied with and the imported metal furniture would not be entitled to item 806.30 tariff treatment.

Sincerely,

(Signed) Harvey B. Fox

Mr. L. J. Morpurgo
Hoechst-Roussel Pharmaceuticals Inc.
Route 202-206 North
Somerville, New Jersey 08876

Dear Mr. Morpurgo:

Thank you for your letter of October 8, 1985, regarding the tariff treatment of a drug for veterinary use prepared and packaged in Canada from domestic components.

You state that furosemide will be exported in bulk along with certain inert ingredients, glass vials, stoppers, aluminum seals, and packaging materials. In Canada, labor and distilled water would be supplied. The foreign processing would consist of mixing the various ingredients into an aqueous solution, filtering and filling the solution into vials (washed and sterilized abroad), sealing the vials with rubber stoppers and aluminum seals, and finally labeling and cartoning along with a package insert.

Your specific question is whether the packaged drug would be entitled to tariff treatment under either item 800.00, 806.20, or 807.00, Tariff Schedules of the United States (TSUS). Item 800.00, TSUS, would not apply because this provision is limited to returned American products which have not been advanced in value or improved in condition while abroad. Item 807.00, TSUS, is not applicable to chemicals as they are not the required solid components necessary for a qualified assembly. The mixing of the various ingredients into an aqueous solution to make the finished medical preparation exceeds an alteration so the provisions of item 806.20, TSUS, cannot apply.

Accordingly, none of the tariff provisions mentioned could be used to secure a lower duty on the imported furosemide preparation. However, the American usual containers, including the vial, stopper, and seal, and the packaging materials such as the label, carton, and insert may be imported free of duty under General Headnote 6(b)(i), TSUS, upon compliance with the regulations.

Sincerely,

G2

553663 EM

Mr. Timothy J. Manning
Fabex, Inc.
27950 Orchard Lake Road
Suite 101
Farmington Hills, MI 48018-4793

Dear Mr. Manning.

In your letter of October 2, 1985, you asked about the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to imported steel strip that would be exported to Mexico for processing into tubing and returned to the United States for further processing. A similar request was the subject of a previous letter dated September 25, 1985, No. 553828.

You stated that large steel sheets would be imported from a country of Europe and cut into specified widths while it was in the United States before exporting the sheets to Mexico for processing into steel tube.

Item 806.30, TSUS, provides that any article of metal (except precious metal) manufactured in the United States, or subjected to a process of manufacture in the United States, if exported for further processing, and if the exported article as processed outside the United States, or the article which results from the processing outside the United States, is returned to the United States for further processing, is subject to the payment of duty only upon the value of the processing performed outside the United States.

Based on the information submitted, it appears that cutting foreign-made steel sheets into special widths before exporting the metal would not qualify as a process of manufacture in the United States. The described cutting appears to be little more than a preparation for the further processing to be carried out in Mexico and certainly can not be considered a manufacturing process.

G3

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

Accordingly, before the foreign steel can be entitled to item 806.30 tariff treatment, the steel sheets must first be subjected to a process of manufacture before exportation to Mexico, and cutting the sheets into smaller sheets is not considered a sufficient manufacture.

Sincerely,

(Signed) RUSSELL ARNOLD

FILE: CLA-2 CO:R:CV:V
553868 EG

TO : Area Director of Customs
New York Seaport
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Reconsideration of Headquarters Ruling 553245 Regarding Classification of Ceramic Works by Gordon Thorlaksson

This is in reference to your memorandum of August 12, 1985, requesting reconsideration of Headquarters ruling 553245 which classified ceramic works by Gordon Thorlaksson under the provision for original sculptures in item 765.15, Tariff Schedules of the United States (TSUS), and entitled to duty-free treatment.

It is not necessary to reiterate that which was discussed in our prior memorandum. The articles, in order to be entitled to duty-free status under the provision for original sculpture in item 765.15, TSUS, must meet the criteria mentioned and discussed at length in our prior memorandum.

You indicate that the question of utility is crucial in the determination of whether an item can be considered a work of art. We agree that the utility of an object is important; however, it is our opinion that in the instant case this factor does not exclude the articles from the category of works of art. The works of the type at issue here merely constitute a mode in which the artist chose to express himself. As indicated in our prior memorandum, this fact will not negate the status of a work of art. In this case, the requisite elements of originality, professional status, specifically limited quantity, method of creation and individual merit are all present. The use of the articles as an everyday vase or bowl is entirely inconsistent with the elements listed.

Again, this conclusion is based on the facts presented. Every determination is made on a case-by-case basis.

It is our opinion that based upon all the information provided, Mr. Thorlaksson's work may qualify as original sculpture under item 765.15, TSUS, and is entitled to duty-free treatment.

(Signed) Harvey B. Fox

Saavedra Imports Co.
Post Office Box 1999
Hawthorne, California 90251

Dear Mr. Saavedra:

In your letter of November 9, 1985, and your letter of June 29, 1985, addressed to our New York office and referred to us for reply, you inquired regarding the tariff status of a cologne made in Chile with essential oils from the United States.

Colognes containing alcohol are classifiable under item 461.35, Tariff Schedules of the United States and may be free of duty under GSP if the product of Chile upon compliance with the Customs Regulations. Information on the GSP requirements is enclosed.

A copy of our publication on marking of country of origin is enclosed for your information. You will note that the English name of the country of origin is used for marking purposes unless there is an exception provided for by law. You state that the oils used are from the United States but do not say whether they were made here. You also indicate that these oils are not the only ingredients and that other foreign-made chemicals, such as alcohol, are added in the blending process. On the basis of the information furnished it appears that the finished cologne is manufactured and not merely packaged in Chile and should be marked accordingly.

Sincerely,

(Signed) RUSSELL ARNOLD

Mr. Steve M. Barringer
North Hand Protection
Post Office Box 587
Maiden, North Carolina 28650

Dear Mr. Barringer:

In your letter of November 13, 1985, you asked for information about the tariff status of rolling finger cots in Haiti and returning them to the United States.

You explained that finger cots are made by dipping finger forms into natural rubber (latex) and exporting them to Haiti for rolling up for customer use, and finally returned to the United States. Finger cots are used in the electronics industry to fit over the fingers to guard against moisture and contamination. Only the rolling process is carried out in Haiti.

Item 806.20, Tariff Schedules of the United States (TSUS), provides for a duty upon the value of repairs or alterations that are made on certain articles exported for that purpose. Repairs and alterations are considered an advance in value or improvement in condition of the exported articles.

Since you explained that they are rolled up in some cases for the customer and are exported for that purpose, it would appear that finger cots, whether or not rolled, may be sold in the same markets to the same classes of buyers and are, therefore, considered to be finished articles of commerce. Certainly rolled finger cots are not regarded as different articles of commerce from those that are unrolled. In these circumstances, the imported rolled finger cots may be classifiable under the alterations provision of item 806.20, TSUS, upon compliance with the regulations. This would also include those finger cots that are exported for the purpose of re-rolling.

Sincerely,

(Signed) RUSSELL ARNOLD

Peter Buck Feller, Esq.
Rose, Schmidt, Chapman, Duff
& Hasley
International Square
1825 Eye Street, NW.
Washington, D.C. 20006-5486

Dear Mr. Feller:

In your letter of November 5, 1985, on behalf of Consolidated Cigar Corporation, you asked for clarification of the Customs Regulations governing importations under item 806.20, TSUS. This was the subject of a previous letter dated November 1, 1985, 553881.

Sections 10.8 and 10.9 of the regulations have recently been modified by removing that portion of the section which provided for waiver of Certification of Registration CF 4455 if the district director is satisfied that the failure to comply with the registration requirement was due to inadvertence, mistake, or inexperience, and not to negligence or bad faith.

With this in mind, item 806.20, TSUS, will not be denied where the exporter of the wrapper tobacco fails to file a Certificate of Registration so long as the district director is satisfied that the imported wrapper leaves and stems are the same as the unstemmed tobacco that was exported, keeping in mind, however, that the district director still retains discretion to require additional documentation if believed necessary as proof of exportation.

Moreover, the modified provisions of the regulations, sections 10.8 and 10.9, are applicable to articles exported to any foreign country. In the final analysis, and in accordance with the rules and regulations, the question of whether claims for allowances under the tariff provision involved are justified by the facts rests ultimately with the area or district director of Customs.

Sincerely,

(Signed) RUSSELL ARNOLD

815851 NY

Donald W. Paley, Esq.
Sharretts, Paley, Carter
& Blauvelt, P.C.
Eighty Broad Street
New York, New York 10004

Dear Mr. Paley:

In your letter of October 17, 1985, on behalf of American Dade Division of American Hospital Supply Corporation, addressed to the New York Customs office, you asked for information about the tariff status of several articles used in hospital and clinical laboratories, including certain racks for holding glass tubes, all imported from Mexico.

The racks, referred to as sedimentation racks, are made of, as described, an easy cleaning plastic construction and are designed for holding up to 8 glass tubes in numbered positions in hematology laboratories. Each rack is imported with a package of 200 glass tubes and is described as having adjustable legs with a level indicator.

You explained that the racks may be made either in the United States or Mexico but, if of foreign origin, would be classified as an entirety when imported with glass tubes.

Under item 800.00, Tariff Schedules of the United States (TSUS), American goods may be returned free of duty after having been exported, without having been advanced in value or improved in condition by any process of manufacture or other means while abroad.

On this basis, assuming the racks to be of American origin and are imported separately from the packet of glass tubes, the racks would be entitled to free entry as American goods returned, without having been advanced in value or improved in condition while abroad, under item 800.00, TSUS. However, racks, whether of foreign or domestic origin, imported with laboratory glass tubes would be dutiable under the laboratory glassware provisions of the tariff schedules, in either item 547.53 or 547.55, TSUS. The importation, consisting of racks and laboratory glassware, would be classifiable as an entirety under the provision for glassware, whether or not furnished with support , frames or mounts of other materials. See Headnote 2, Subpart C of Part 3, Schedule 5, TSUS.

G9

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ——

This tariff provision for laboratory glassware would include racks of American origin that are imported with glassware since there can be no constructive segregation, or separating out for different classification, of components making up a tariff entity. The American origin of the racks is merged in the imported entity and the exemption for American goods returned is precluded.

Sincerely,

CLA-2 CO:R:CV:V
553925 KP

Mr. Tor Vatne
President
United Casing Inc.
16800 Greenspoint Park Drive
Houston, Texas 77060

Dear Mr. Vatne:

This is with reference to your letters dated May 23, 1985, and August 7, 1985, wherein you asked us to reconsider your request for a determination that certain pipe which is upset, heat treated, and threaded in the United States Virgin Islands may be imported free of duty under General Headnote 3(a), Tariff Schedules of the United States (TSUS), as a product of that possession.

In our letter of April 2, 1985 (our reference CLA-2 CO:R:CV:V 553539 KP), we indicated that we did not believe that the operations performed on the pipe imported into the Virgin Islands would be sufficient to substantially transform it into products of the Virgin Islands. However, in your recent correspondence, you more fully described the heat treatment aspect of the processing as one which incorporates a full heat treatment line that alters the metallurgical characteristics of the imported raw steel tubes accordingly to grade within the entire spectrum defined by the American Petroleum Institute, as well as special custom grades.

Without a complete description of the entire process to which the imported steel tubes would be subjected, we are unable to definitively state whether that process would effect a substantial transformation of the steel tubes. Nevertheless, we recently ruled that steel tubes used as constituent materials in producing oil country tubular goods were substantially transformed by undergoing a substantial process which included upsetting, quenching, tempering, threading, coupling, and testing operations. See Customs Ruling CLA-2 CO:R:CV:V 553739 KP (Nov. 21, 1985), copy enclosed. If the process which you are considering is substantially the same as the second processing stage described in the enclosed ruling, then it would be sufficient to substantially transform the imported steel tubes into products of the Virgin Islands. In that case, the finished

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

products would be eligible for duty-free entry into the United States under General Headnote 3(a), TSUS, provided that all other pertinent requirements were satisfied.

Sincerely,

553936 MS

Richard J. Kaplan, Esq.
Lamb and Lerch
233 Broadway
New York, New York 10279

Dear Mr. Kaplan:

In your letter of November 1[illegible], 1995, you request a ruling regarding the tariff classification and General System of Preferences (GSP) eligibility of certain footwear uppers which your client, Converse, Inc., intends to import from Mexico.

Converse will ship to Mexico raw materials consisting of leather in sides, vinyl in sheets, plastic in sheets, polyfoam in sheets, rolls of laminated nylon and foam, and non-woven fabric in sheets, all of which are the growth, product or manufacture of some country other than Mexico. In Mexico these materials will be rye cut to size and shape and converted into assembly-ready components. The leather sides will be converted into quarters, vamps, eyelet stays, toe pieces and heel pieces and tabs. The vinyl sheets will be converted into tongues and collars. The plastic will be converted into collar lacs, the non-woven fabric sheets into vamp reinforcements, and the nylon/foam into quarter reinforcements.

After the raw materials have been converted into assembly-ready components, they, along with labels, thread and foil (the products of countries other than Mexico) will be used in assembling and producing complete footwear uppers. The assembly of the components into footwear uppers in Mexico will involve perforation of the quarter and vamp using a Freeman press machine, the trimming or skiving of the toe piece, various stitching operations, punching eyelet holes, inserting and tacking the counter, applying lasting lace through the eyelet holes and cutting the lace keeper into the tongue.

While well over 50 percent of the value of the component materials of the complete footwear uppers is represented by the value of the leather, the uppers contain a substantial amount of material other than leather.

As Customs has ruled in the past, the correct classification of complete footwear uppers that are in chief value of leather, but contain substantial amounts of material other than leather, is under item number 791.0010, Tariff Schedules of the United States. Products receiving this classification, "Articles not specially provided for, of leather: Other... Footwear uppers," are entitled to GSP treatment, if they otherwise qualify.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A3

It is Customs view that the described uppers which Converse plans to import into the United States from Mexico would be considered products of Mexico for purposes of GSP; that the conversion of the raw materials (leather sides, vinyl, plastic, polyfoam, non-woven fabric and nylon sheets) into finished parts for footwear uppers results in a substantial transformation of such raw materials into intermediate products of Mexico; and that the cost or value of such intermediate products may be included as part of the 35 percent value requirement for determining the GSP eligibility of the finished footwear uppers.

Sincerely,

(Signed) Harvey B. Fox

553936 EM
814513 NY

Mr. James J. Kelly
Campbell Soup Company
Post Office Box 202
Essington, Pennsylvania 19029

Dear Mr. Kelly:

In your letters of July 11 and November 11, 1985, on behalf of Campbell Soup Company, you asked about the applicability of item 806.20, Tariff Schedules of the United States (TSUS), to sliced frozen mushrooms and diced chicken meat, that are proposed for export to Canada for the purpose of freeze-drying and return to the United States.

Freeze-drying is defined as a drying process whereby ice in frozen products is transformed or sublimated into vapor without passing through the liquid state. The frozen product is placed in a vacuum under a gradual application of heat, the ice is drawn off as a vapor, and the result is a freeze-dried food product that weighs less than its original weight.

Item 806.20, TSUS, provides for a duty upon the value of repairs or alterations that are made on certain articles exported for that purpose. Repairs and alterations are considered an advance in value or improvement in condition of finished goods.

In the described circumstances, both foods are considered finished products and their identities as foods are not lost or destroyed in the process. On this basis, we believe that these foods, whether in the frozen or freeze-dried state, retain their same value and quality as foods and, therefore, the change in condition is considered to be within the alterations provisions of item 806.20, TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

Ms. Patricia Jester
Creative Foods Limited
1700 Vine Street/West
Des Moines, Iowa 50265

Dear Ms. Jester:

In your letter of July 22, 1985, which was recently referred to this office for reply, you inquired concerning the duty-free status of lithographs, Canadian Indian wood carvings, paintings signed by the artist, and handwoven wall hangings.

Paintings, pastels, drawings, and sketches, whether or not originals, if executed wholly by hand (no stencils or mechanical methods) are free of duty under item 765.03, Tariff Schedules of the United States (TSUS).

Lithographs, etchings, woodcuts and other prints, if printed by hand from plates, stones, or blocks (etched, drawn, or engraved with hand tools) are free of duty under item 765.10, TSUS. They need not be signed or numbered by the artist. The United States Customs Service does not maintain an accepted artists list.

There is no free entry provision applicable to Canadian Indian totem poles or animal carvings so they would probably be dutiable unless by a professional sculptor who qualifies for the benefits of item 765.15, TSUS. Handwoven wall hangings would be subject to duty at various rates depending upon the textile material used in their weaving.

A copy of Part II, Subpart A, Schedule 7, TSUS, which covers works of art is enclosed for your information.

Sincerely,

(Signed) RUSSELL ARNOLD

Ronald A. Daley, Esq.
Charrette, Daley, Carter
& Blauvelt, P.C.
Forty Broad Street
New York, New York 10004

Dear Mr. Daley:

In your letter of December 10, 1985, on behalf of C. R. Bard, Inc., you ask for information about the tariff status of certain urethral tray units that are assembled and packaged in Mexico from components of United States origin.

Samples of complete trays and accessorized components were submitted. The urethral tray units are designed to facilitate closed-system or timed drainage procedures in hospitals and clinics and are identified as urethral tray #772414Y and Foley trays #897400Y and #864100Y. All components, including packaging materials, are of United States origin. It is explained that the foreign operations generally consist of packaging the components in a tray, sealing each tray in a polybag, and packaging a quantity of polybag units in corrugated cartons for return to the United States.

The components for each tray unit are similarly listed as drainage bags, drainage bag hangers, drainage tubes, catheter assemblies, clamp/outlet assemblies, suturing clamps, specimen containers with lids and labels, cleansing solution, underpads, lubricant jelly, foam balls, forceps, and tag and letter trays with insert sheets and adhesive, of polymers.

In addition to packaging the trays, some foreign components are joined together in an assembled condition, such as drainage tubing and bags, hangers, catheter assemblies, connector [illegible], bags, and suturing clamp assemblies.

With respect to the packaging of articles abroad, item 807.00, Tariff Schedules of the United States (TSUS), provides that products of the United States may be returned free of duty after having been exported, without having been advanced in value or improved in condition by any process of manufacture or other means while abroad. The test specified in item 807.00 cases is whether the percentage of foreign origin has itself been the effect of an advance in value or improvement in condition while abroad.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A9

So long as most of the exported articles making up the trays have not been the subject of some change, such as a permanent bond, the mere packaging of the products is not sufficient to preclude them from being classified as American goods returned free of duty under item 800.00, TSUS.

On the other hand, with respect to foreign assembly operations, item 807.00, TSUS, provides for the assembly of American components abroad, that are exported in condition ready for assembly without fabrication.

On the basis of the samples and information submitted, allowances would be made under item 807.00, TSUS, for those components of United States origin that are considered to have been joined together in an assembly. This would include bonding parts with glue and assembling connectors, port connectors, sheeting clamp assemblies, joining catheters to drainage tubes or drainage bags, in a fitting together of components, are all regarded as assembly operations within the tariff provision.

Containers or holders of United States origin may be returned free of duty under the provisions of General Headnote 6(b)(i), TSUS, as the usual type of unreusable containers ordinarily sold with their contents.

Sincerely,

(Signed) RUSSELL ARNOLD

JAN 14 1986

CLA-2 CO:R:CV:V
553959 EM

District Director of Customs
U.S. Customs Service
Post Office Box 3130
Laredo, Texas 78041-3130

Dear Sir:

This is in reply to the request for Internal Advice No. 85/65, concerning the eligibility of belt loops used in the assembly of jeans and other trousers.

ISSUE:

The question raised concerns the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain belt loops made in Mexico for use in the assembly of jeans that are returned for sale in the United States.

FACTS:

Sample fabric and belt loop strip materials were submitted. Belt loop fabric is determined by the style trousers to be assembled and the belt loop length is based on the width of the belt contained within the loops. Strips are cut from matching fabric making up other components that are exported for assembly into trousers.

Belting fabric material is cut to length and width before being exported to Mexico. In making a roll of belt loop material, the foreign process consists of placing the exported fabric material on a two-needle chainstitch sewing machine which not only folds the fabric material upon itself but also stitches the folded strip into a roll of belt loop material.

A11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In a further operation, the length of sewn belt loop material is mounted on an automated belt loop attaching machine which cuts the loop material to appropriate length in assembly line fashion, depending upon the belt width to be contained, and at the same time attaches the cut lengths of belt loops by two bartacks to the trousers in a machine cycle.

LEGAL ANALYSIS:

With respect to a textile assembly, item 807.00, TSUS, applies to United States components that are required to be fitted with other components in an assembly process, with no operation performed except the attachment of the components to form the imported merchandise and operations incidental thereto.

On the basis of the samples and information submitted, the intermediate operation carried out in Mexico of first making the belt loop strip from the exported fabric and then cutting the strip into individual belt loops and attaching to the pants, constitutes a fabrication of the exported textile strip fabric. The belt loops must be manufactured first from the exported strip fabric. Making belt loop strip from exported fabric is not an assembly operation. Nor is it considered incidental to assembly. On basis of these conditions, the requirement under the tariff provision that a component "be ready for assembly without further fabrication" dictates that the component be a finished article ready for assembly, except for the process of assembly itself and operations incidental thereto. Cutting the belt loop strip into proper lengths to form belt loops is considered incidental to the assembly but the intervening operation of first making the belt loop strip material is not within the contemplation of item 807.00, TSUS.

A12

553959

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

CONCLUSION:

Accordingly, no allowances can be made under item 807.00, TSUS, for the belt loops made abroad from exported fabric in the manner described.

Sincerely,

(Signed) RUSSELL ARNOLD

CLA-2 CC:R:CV:V
553976 EM

Mr. J. Gilbert Donaldson
Vice President
The Jennings Company
Post Office Box 10126
Savannah, Georgia 31412

Dear Mr. Donaldson:

In your letter of January 10, 1986, on behalf of the Arrow Company, you asked about the applicability of item 860.30, Tariff Schedules of the United States (TSUS), to certain shirts that will be entered as samples and marked with a "sample" stamp.

With respect to samples used in the United States for soliciting orders for foreign merchandise, item 860.30, TSUS, provides for the free entry of any sample valued not over $1 each, or marked, torn, perforated, or otherwise treated so that it is unsuitable for sale or for use otherwise than as a sample, to be used in the United States only for soliciting orders for products of foreign countries.

Accordingly, if the entered sample shirts are indelibly marked with at least 3-inch "sample" stamp across the front or back panels, or mutilated in such manner that there is no question but that they may only be used as sample merchandise for soliciting orders for foreign merchandise, they may be accorded free entry under the tariff provision.

Sincerely,

[illegible]

Mr. C. Arnone
Manager
International Distribution
ICI Americas, Inc.
Wilmington, Delaware 19897

Dear Mr. Arnone:

In your letter of May 28, 1985, addressed to our New York office and forwarded to us for reply, you asked for information about the tariff status of a certain pesticide called Atroban, which you propose to export to the United Kingdom for packaging into aerosol cans and return to the United States.

You explained that the pesticide and aerosol propellant gas (butane) will be filled on a tolling basis into foreign-made aerosol cans. The can will be housed as cartridges on battery-operated garden sprayers. When the trigger of the sprayer is pressed, as explained in a brochure submitted, electrostatically charged droplets of the insecticide or weedkiller are propelled from the nozzle of the container cartridge. Presumably, the aerosol cans will be filled with the insecticide, capped and sealed, and charged with the propellant gas.

With respect to the packaging of American products abroad, item 800.00, Tariff Schedules of the United States (TSUS), provides for the free entry of American goods returned which have not been advanced in value or improved in condition while abroad. The test specified in these cases is whether the merchandise of American origin has itself been the object of an advance in value or improvement in condition. Absent some change or alteration in the packaged products themselves, the mere packaging of goods is not sufficient to preclude the American merchandise from being classified as American goods returned under item 800.00, TSUS.

The foreign operations consist merely of filling foreign-made cans with the insecticide and returning them to the United States. The propellant gas appears to have no effect on the exported insecticide other than as a means for expelling the product from the cans. The propellant appears to be a part of the packaging process. In these circumstances, the contained packaged insecticide product may be entitled to free entry as American goods returned under item 800.00, TSUS.

B1

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ____

Further, with respect to foreign-made containers, the Customs Service will accord duty-free treatment to packaging costs and the usual unreuseable containers holding duty-free merchandise under item 800.00, TSUS. The containers may be marked to show the United States as the country of origin.

Mr. Frank Brennan
Consultant
Mudge Rose Guthrie Alexander
& Ferdon
2121 K Street, NW.
Washington, D.C. 20037

Dear Mr. Brennan:

In your letter of January 16, 1986, on behalf of Sidermex International, Inc. you asked about the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to certain metal static arms used in transmission line structures, that are made in Mexico from alloy steel plate of United States origin.

A drawing was submitted. The arm shaft is about 6 ft. 7in. long and is made in Mexico from exported steel plate material. On return to the United States, a series of some six holes, each presumably about 1/2 in. in diameter are burned into the shaft. In addition, the shafts undergo a dulling process of the galvanized steel by immersion in an oakite bath at a raised temperature and a rust-prevention coating is applied.

With respect to a duty allowance for articles of metal made abroad from United States-made base metal, item 806.30, TSUS, requires further processing to be performed on exported articles both in the foreign country and again upon return to the United States. In order to meet the requirements of "further processing," some operations must be applied to the metal articles that will change their shape or form or impart new and different properties and characteristics to the metal that did not exist before and which become an integral part of the metal itself.

On the basis that steel alloy plate of United States origin is exported and converted into static arm structures which are returned for further processing mainly by the drilling of a series of holes through the metal arms, it appears that both the foreign and domestic segments of the processing cycle are met. In these circumstances, we are of the opinion that the processing requirements are satisfactorily complied with and the imported static arms are eligible for item 806.30 tariff treatment, upon compliance with the regulations.

Sincerely,

(Signed) RUSSELL J. ARNOLD

Internal Advice Request: Disposition of Forfeited and Abandoned Gold Coins

An internal advice request from your office, dated July 30, 1979, concerned the auctioning process for forfeited and abandoned gold coins.

In answer to your first question, the Customs Service may now sell gold at auction inasmuch as restrictions on importing gold were lifted, effective December 31, 1974 (P.L. 93-373).

The auction must be open rather than done under sealed bids since there is no provision in the law, the regulations, or the Customs Manual which authorizes the use of sealed bids.

In respect to the question concerning the treatment at auction of formerly restricted gold coins and those which were seized for failure to declare and similar violation, all such gold items are treated alike when they reach the auction stage since the importation of gold is no longer restricted.

If entry of the merchandise were presently restricted, the buyer at auction would have to obtain the approval of the appropriate government agency before taking possession of the article. It therefore makes no difference, for auction purposes, whether some of the gold coins were originally detained as restricted merchandise.

SUBJECT : Request for Internal Advice; [redacted]
District Case No. 81-1001-53039

This is in regard to the request for internal advice submitted by counsel for [redacted] Such request is based on facts arising in the above-noted case. Specifically, counsel asks for a ruling on the issue of whether Customs is, in accordance with the provisions of section 1.97 of the Food and Drug Administration Regulations (21 CFR 1.97), bound by the recommendation of that agency in all cases for liquidated damages arising from violations of bonds issued pursuant to section 801(b) of the Food, Drug, & Cosmetic Act.

Counsel also includes a supplemental petition for relief with the internal advice request. This memorandum will make no recommendation as to cancellation of the claim for liquidated damages imposed in this case, but will only deal with issues regarding liquidated damages cancellation authority.

It is current practice for Customs to forward to FDA for recommendation all petitions for relief regarding claims for liquidated damages arising from any violation of the bond when the merchandise involved is refused admission into the United States by the FDA. The recommendations of FDA regarding cancellation are routinely followed by Customs in all cases. The basis for this procedure is 21 CFR 1.97(b) which states, in pertinent part, that the collector (sic) of Customs "may cancel the liability for liquidated damages ... upon payment of a lesser amount or upon such terms and conditions as shall be deemed appropriate ... but the collector shall not act under this regulation in any case unless the District Director (i.e., of FDA) is in full agreement with the action."

Counsel suggests that this procedure has developed as a result of an incomplete reading of section 1.979. He posits that Customs is only bound by the FDA recommendation in limited instances. It is claimed that the regulation does not provide a wide swath of jurisdiction for the District Director of the FDA. We agree.

BS

As counsel aptly notes, section 601(b) of the Food, Drug and Cosmetic Act authorizes the Secretary of the Treasury to release imported articles to the owner upon execution of a "good and sufficient bond providing for payment of liquidated damages in the event of default as may be required pursuant to regulations of the Secretary of the Treasury (emphasis theirs)." The authority to cancel claims for liquidated damages is generally granted to the Secretary of the Treasury pursuant to section 623(c) of the Tariff Act of 1930, as amended (19 U.S.C. 1623(c)). Section 1.97 of the FDA Regulations is promulgated pursuant to authority granted the Secretary of (then) HEW to prescribe regulations for the efficient enforcement of section 801.

We concur with counsel's close reading of section 1.97, which limits the requirement of full agreement of the District Director of FDA with regard to cancellation of claims for liquidated damages to two specific situations.

Section 1.97 reads as follows:

> (a) The bonds required under section 801(b) of the Act may be executed by the owner or consignee on the appropriate form of a Customs single entry or term bond, containing a condition for the redelivery of the merchandise or any part thereof upon demand of the collector of Customs and containing a provision for the performance of conditions as may legally be imposed for the relabeling or other action necessary to bring the article into compliance with the Act or rendering it other than a food, drug, device or cosmetic, in such manner as is prescribed for such bond in the Customs Regulations enforced on the date of request for authorization. The bond shall be filed with the collector of Customs.
>
> (b) The collector of Customs may cancel the liability for liquidated damages incurred under the above-mentioned provisions of such bond, if he receives an application for relief therefrom, upon the payment of a lesser amount or upon such other terms and conditions as shall be deemed appropriate under the law and in view of the circumstances, but the collector shall not act under this regulation in any case unless the District Director is in full agreement with the action.

B6

Counsel avers, and we concur, that subsection (a) of section 1.97 requires that the bond contain a clause that authorizes demands for redelivery and two specific provisions that (1) require performance by the bond principal of conditions that may be legally imposed for relabeling or other action necessary to bring the article into compliance with the Act, or (2) require a rendering of violative merchandise into that which is other than a food, drug, device or cosmetic.

Accordingly, the provisions of the regulation are only in force in those two limited situations. For example, a claim for liquidated damages based on the exportation of refused merchandise without Customs supervision would not fall into the specific language of the regulation. Exportation without supervision is not a circumstance which involves bringing the article into compliance or rendering it into a product not within the purview of the act.

The provisions of subsection (b) strictly limit the requirement of agreement of the District Director (FDA) to any mitigation decision regarding a breach of a bond and assessment of a claim for liquidated damages for violation of the "above-mentioned provisions of the bond", i.e., those provisions listed in subsection (a). If the gravamen of the offense is not related to those specific provisions, agreement of the District Director, FDA, would not be required. A recommendation as to cancellation should still be solicited, but Customs would not be constrained by law to follow it.

This situation is not dissimilar to current procedures regarding remission of forfeitures incurred pursuant to title 22, United States Code, section 401, in which recommendations as to remission are solicited from the Department of Commerce or Department of State (as appropriate). Remission authority in those cases lies with the Secretary of the Treasury pursuant to section 618 of the Tariff Act of 1930, as amended (19 U.S.C. 1618), and the recommendations of the other agencies, while persuasive, are advisory only.

Accordingly, we are of the view that the subject case, which involves a failure to export refused merchandise under Customs supervision, may be administratively processed by your office and it is not mandatory that the recommendation of the District Director, FDA, be followed.

[redacted]

Dear [redacted]

This is in reference to two supplemental petitions filed by you on behalf of your client [redacted]. These petitions were filed in relation to Seattle District Penalty Case No. 73-[illegible]-13193 and Anchorage District Penalty Case Nos. 74-3123-[illegible], 10123, -33, and 10360.

After careful consideration of your submissions on these matters and a review of the comments provided by the involved field personnel, it has been decided that the issue relating to the retroactive application of the current regulations found at 14, CFR, Part 171 to the facts and circumstances of these cases presents a significant policy issue. As such, the issue is being referred to the Department of Treasury for their review and comments. You will be notified further upon the completion of the review by the Department.

Sincerely,

Marilyn G. Morrison

ENF-4-02.2 CO:R:E:C
652754 HL

[redacted]

Area Director of Customs
Airport International Plaza
Newark, New Jersey 07114

Dear Sir:

Your letter of July 30, 1981, forwards the submission of [redacted] dated June 15, 1981, which attempts to settle a claim for monetary penalty of $17,553,111.00 proposed in a pre-penalty notice issued against the [redacted] in Newark Area Case No. 81-4601-50867. The proposed claim was issued for violation of 19 U.S.C. 1592 in connection with the importation of wearing apparel entered under cover of 467 Customs entries filed during the period from January 1978 through December 1980. Entry documents falsely described blue jeans as culottes, short sets as swimwear, boys' wearing apparel as girls' wearing apparel, sweaters as dresses, short sets as playsuits, tops as shirts, shorts as underwear, and jackets as sweaters.

Misdescription in this case resulted in the entry into the United States of wearing apparel with incorrect Textile Visa (Quota) Category Numbers. The total appraised domestic value of the merchandise entered or attempted to be entered by withdrawal from warehouse exceeded $17.5 million. The record shows that [redacted] the principal officer of [redacted] plead guilty in United States District Court, District of New Jersey, to charges that he paid a Customs officer $1,000.00 in order to allow blue jeans valued at $1,554,364.00 and misdescribed as culottes to enter the United States with improper Textile Visa licenses. [redacted] also plead guilty to similar charges. Investigation has revealed that other wearing apparel imported by [redacted] was misdescribed in order to obtain Textile Visa (Quota) Category Numbers which were more readily available. No loss of revenue is claimed.

Seizure of children's wearing apparel entered by [redacted] into warehouse was effected as security for collection of the proposed monetary penalty. This merchandise valued at nearly $4.5 million is restricted from entering the commerce of the United States without the proper Textile Visa (Quota) Category Numbers. Security of $514,000.00 has been deposited in order that a portion of this merchandise be released. The value of these warehouse entries is included in the proposed claim for monetary penalty.

652754

89

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The seized merchandise consisted of short sets which were attempted to be entered for quota purposes as swimwear. It is pertinent to note that [redacted] has sued in the United States Court of International Trade on the issue of quota classification following its failed attempt to enjoin Customs from denying release of this merchandise from warehouse. In this regard, [redacted] contends that a bona fide quota classification question should not form the basis for a penalty case.

Pursuant to the proposed settlement of June 15, 1981, amended as to financial terms by further submission of September 28, 1981, [redacted] would pay an initial sum of $300,000.00, and each year thereafter, for three years, a sum of $75,000.00, to be evidenced by three notes, each bearing interest at 12 percent per annum. [redacted] would also agree to dismissal of its quota classification case pending in the United States Court of International Trade noted above. In return, the Government would release its claim in the penalty action, release the security deposit, cancel the pre-penalty notices issued against [redacted] foreign suppliers, and cease investigation of undervaluation of certain wearing apparel imported by [redacted]. According to [redacted] the proposed settlement takes into account the company's financial stringency, and the fact that criminal sanctions have already been imposed.

Inasmuch as [redacted] claims that its poor financial condition will affect the collectibility of any penalty claim, it has submitted on the question of financial ability to pay various financial information. This information includes audited, combined financial statements for [redacted] and its affiliate, [redacted]. These statements are prepared on a combined basis since both companies share common ownership, the same location, facilities, and employees. In fact, [redacted] is an officer of both companies, effecting the importation of merchandise on behalf of both companies. However, one company deals in girls' wearing apparel, and the other in boys' apparel. Federal income tax returns for each company have also been submitted.

Headquarters Regulatory Audit Division has reviewed the financial information submitted and advised that ability to pay should be determined with respect to the combined equity of both [redacted]. It has also been determined that the original pre-penalty notices to [redacted] should be cancelled and new pre-penalty notices issued against [redacted] and, in addition [redacted].

Investigation of other violations sought to be encompassed by [redacted] in its settlement proposal is still underway. Since this investigation involves an undetermined loss of revenue, we cannot negotiate a settlement until the extent of loss to the Government is ascertained.

DOCUMENT ... TO THE PUBLIC

652754

B10

In view of the foregoing, we cannot now reach a settlement decision in this matter. However, counsel for [redacted] may submit an amended proposal at a more appropriate date in the future after completion of the pending investigation and opportunity to respond to the new pre-penalty notices.

You may provide counsel for [redacted] with a copy of this letter.

Sincerely,

Marilyn H. Morrison

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

16 APR 1982

EMF 4-02.2 CO:R:E:C
652806 LR

Dear Sir:

This is in reference to your letter dated October 1, 1981, which forwarded the petition for relief submitted by counsel on behalf of [redacted] in connection with Penalty Case Nos. 79-4701-02425 (Case A) and 79-4701-59814 (Case B).

Case A involves the seizure of 20,973 pieces of men's and women's wearing apparel domestically valued at $192,486 which was entered at J.F.K. Airport under cover of Immediate Delivery No. 3176917 on September 13, 1979. Case B involves a claim for monetary penalty in the amount of $21,670 in connection with the importation of 19,024 pieces of men's shirts entered at J.F.K. Airport under cover of Consumption Entry No. K533433 on August 29, 1979. The merchandise was seized and the claim was assessed pursuant to title 19, United States Code, section 1592 (19 U.S.C. 1592) and 19 U.S.C. 1592, as amended by P.L. 95-410, respectively, because the documents submitted upon entry allegedly contained the material false statement that Dubai was the country of origin when in fact it was India. If, as alleged, the merchandise was made in India, it was subject to quota restrictions and would not have been permitted entry into the commerce of the United States.

The seized merchandise was released on November 6, 1979, and was re-exported upon deposit of a letter of credit in the amount of $32,000.

Petitioner requests remission and in the alternative mitigation of the claim for forfeiture and the monetary penalty based on its primary contention that it never intended to defraud or violate any statutes or regulations. In particular, petitioner maintains that it is not aware that Dubai is not the country of manufacture, that it has always had good relations with Customs, that it knew that quotas for Indian garments similar to the garments in issue were subject to reopening, that there has been no loss of revenue or other adverse effect on the Government, and that it has already been financially penalized.

Before addressing petitioner's claims, we will discuss whether there was a material falsity on the entry documents, an essential element of the alleged violation.

Material Falsity

Under the provisions of 19 U.S.C. 1592, any person who enters or attempts to enter merchandise into the commerce of the United States by means of any document which is material and false may be subject to penalty. As indicated above, the instant penalties are based on the allegation that petitioner's statements on the entry documents with regard to country of origin constituted material falsities. There can be no question that petitioner's statements in this regard were material since they directly affected whether the merchandise

652806

B12

NOT RELEASED TO THE PUBLIC

could be entered into the commerce of the United States. At the time of these two importations, the subject merchandise if manufactured in India was subject to quota restrictions and would not be permitted entry. If, as stated, [redacted] was the country of origin, there were no such quota restrictions. Furthermore, we believe that petitioner's statements that [redacted] is the country of origin are false. Although there is evidence in the record which supports a determination that either India or [redacted] is the true country of origin, the preponderance of the evidence supports the former conclusion.

The evidence supporting the conclusion that Dubai is not the country of origin consists of the following.

The Customs Import Specialist responsible for handling this line of merchandise has indicated that there are no facilities in Dubai for the manufacture of the imported garments. He further reports that the only two importations on record which had ever shown this type commodity having been made in [redacted] are the ones involved in these penalty cases. The record further shows that petitioner had previously imported all of its garments from India. In fact, it is reported that a comparison of a shirt allegedly made in [redacted] with a shirt made in India revealed that they are absolutely identical and were no doubt produced by the same manufacturer. It is also significant that a close inspection of the garments revealed that underneath the present labels showing "Made in [redacted]" were stitches from previously removed labels, indicative of the fact that these labels may have been substituted for previous labels. Also, despite the fact that petitioner imported close to 4[illegible] garments, the record indicates that there was virtually no contact between petitioner and Abu-Khalil General Establishments, the alleged Dubai manufacturer. The only correspondence presented is a letter of introduction by [redacted] stating that it was aware that petitioner had a quota problem on deliveries from India and that it could manufacture and export garments as per petitioner's specifications and models and a purchase order dated June 1[illegible], 1976, for the purchase of 2[illegible] different items from the [redacted] firm. There is no other written communications regarding the means by which orders were placed or any communications involving specific manufacturing requirements.

In addition to the letter of introduction and the purchase order referred to above, the evidence in the record which supports the opposite conclusion, i.e. that [redacted] is the country of origin, consists of a certificate of origin issued by the [redacted] stating that the goods in question "are of fabrics of Indian Origin and garments manufactured in [redacted]." Petitioner has also presented proof of payment to [redacted] General Establishment for one of the shipments.

Upon consideration of the above, we believe that the evidence of record supporting the conclusion that [redacted] is not the true country of origin of the subject merchandise is more credible and probable than evidence to the contrary. The statements of the Import Specialist that there are no facilities in [redacted] for the manufacture of the imported garments are especially persuasive. Also, the absence of communication between petitioner and the alleged [redacted] manufacturer is significant. Accordingly, we find that petitioner's statements that Dubai is the country of origin constitute material falsities.

B13

MAY BE RELEASED TO THE PUBLIC

652 806

Degree of Culpability

The claim for $21,870 (Case B) was based on the preliminary determination that the violation occurred as a result of gross negligence. No preliminary determination has been made with respect to Case A.

For the reasons set forth below, we find that there is insufficient evidence to support either a finding of fraud or gross negligence.

Although it has been established that petitioner's statement regarding country of origin was false, there is no evidence that petitioner had actual knowledge of the true facts, a prerequisite for either a finding of fraud or gross negligence.* Although it is possible that petitioner knew that India was the country of origin and was involved in a scheme to avoid quota restrictions, the record contains no evidence of such knowledge or involvement. It is also possible that petitioner was totally unaware that [redacted] was making misrepresentations to him regarding the country of manufacture. Indeed, the documents presented by petitioner are consistent with the latter interpretation.

After reviewing the record, we are of the opinion that the material falsities were a result of negligence on the part of petitioner. Although petitioner may not have been aware of the fact that the garments were manufactured in India, such lack of knowledge was the result of its failure to use due care is ascertaining the true facts. In view of the fact that petitioner was in the business of importing garments from India and that during the time in question such garments were subject to quota restrictions, we believe that it had an affirmative obligation to verify that the imported garments were not in fact manufactured in India. In these circumstances, petitioner's total reliance on letter of introduction by the [redacted] firm was misplaced. Accordingly, petitioner's request for total remission of the penalties is denied.*

Mitigating Factors

As mitigating factors petitioner claims that it has no previous violations, that there has been no loss of revenue or other adverse effect on the Government, and that it has already been financially penalized.

The record supports petitioner's claim of no prior Customs violations. We find this to be a mitigating factor.

Although petitioner is correct in its assertions that there was been no loss of revenue in this case, we cannot consider this to be a mitigating factor. By its very nature, a quota violation usually results in no loss of

---

*Under the mitigation guidelines, a finding of gross negligence is also proper if it can be established that petitioner acted with a wanton disregard for the relevant facts. Although the record clearly establishes that petitioner failed to use due care to ascertain what the true country of origin was, there is insufficient evidence showing a wanton disregard for the facts.

---

*In light of our finding that there is insufficient evidence of fraud, petitioner's claim that it knew that quotas for Indian garments similar to the garments in issue were subject to respondent is irrelevant.

MAY BE RELEASED TO THE PUBLIC

652806

B14

revenue. However, it is potentially a very serious violation in that it may result in prohibited merchandise entering the commerce of the United States. Indeed, in this case one of the shipments did enter the commerce of the United States.

With regard to petitioner's claim that it has already been financially penalized, it claims that substantial business was lost because it was unable to fill orders, that costs have been incurred and will be generated in the search for new suppliers, and that money was spent to release the merchandise for removal from its warehouse area to Customs custody and to reexport the goods back to [redacted]. Although there is notable in the record contradicting these claims, we decline to grant further mitigation on this basis. As indicated above, we believe that petitioner's conduct contributes to the violations in this case and as a result it should bear the resulting financial burdens.

Conclusion

In light of our findings of negligence and one mitigating factor, the forfeiture is remitted upon payment of $[illegible] and the penalty claim is mitigated to $[illegible]. Upon such payment, the letter of credit should be returned to petitioner.

Please notify petitioner, through counsel, of this decision enclosing a copy of this letter thereto.

Sincerely,

(Signed) [illegible]

WASHINGTON

14 JUL 1982

REFER TO

ENF-4-02.2 CO:R:E:C
652908 HL

District Director of Customs
DFW Airport, Texas 75261

Dear Sir:

Your memorandum of February 5, 1982, forwards the petition of [redacted] of Dallas, Texas, requesting relief from a claim for monetary penalty of $731,398.00 assessed for violation of 19 U.S.C. 1592 and 1595a in connection with Dallas/Fort Worth Penalty Case No. 80-5501-50560 and Seizure Case No. 80-5501-00176.

On May 13, 1980, two forty-foot containers imported by petitioner from Taiwan were seized for violation of 19 U.S.C. 1592 and 1595a. Entry papers filed in connection with one container (CE 80-109209-7 dated May 12, 1980) described the merchandise therein as 1000 cartons (2000 dozen) of men's ornamented polyester-cotton jeans. The first four rows of boxes in the container contained 220 boxes of jeans as described. However, beginning with the fifth row, 100-percent cotton jeans were bulk-packed in bundles, followed by 77 boxes of women's blouses, 47 boxes of men's shirts, as well as more rows of 100-percent cotton jeans. In total, there were 2,373 dozen bulk-packed 100-percent cotton jeans, 770 dozen blouses, and 235 dozen shirts, which were not invoiced.

Entry papers filed in connection with the second container (CE 80-109199-1 dated May 5, 1980) also described the merchandise as 1000 cartons of men's ornamented polyester-cotton jeans. The container was packed in a manner similar to the other. The first two rows of boxes contained 101 cases of polyester-cotton jeans. Beginning with the third row, however, 100-percent cotton jeans were bulk-packed or in boxes. total, 2,827 dozen 100-percent cotton jeans were unmanifested.

The total loss of revenue associated with the two entries was reported to be $58,567.48. However, because visas for the unmanifested 100-percent cotton articles were not provided, both shipments were in violation of quota restrictions. The penalty amount of $731,398.00 represents the domestic forfeiture value of the merchandise seized. The 321 cases of polyester-cotton jeans covered by visa were released on October 2, 1980, upon submission of a letter of credit in the amount of $52,695.00.

652908

C2

RELEASED TO THE PUBLIC

REPLY TO COMMISSIONER OF CUSTOMS WASHINGTON, D.C. 20229

Customs is convinced that the subject containers were packed in a manner designed to conceal and smuggle non-visa merchandise into the United States. The entry papers were false because they failed numerically to report the large overage of wearing apparel and, in addition, misdescribed the contents of the containers. The record shows that [redacted] own agent in Taiwan gathered the merchandise from small Taiwanese suppliers and packed the containers. An audit of [redacted] financial records obtained through grand jury subpoena compared petitioner's domestic sales of record to imports of record during the period November 1979 through May 1980. Audit results indicated that [redacted] imported at least 11 percent more blue jeans than reported to Customs on consumption entries. Following criminal investigation with respect to the subject entries, [redacted] was indicted and pled guilty to two counts of criminal fraud under 18 U.S.C. 542 and two counts of criminal smuggling under 18 U.S.C. 545. It is pertinent to note that a third and fourth container of jeans, packed in the same manner as those seized, and also containing a large number of unmanifested non-visa 100-percent cotton jeans, were both refused upon arrival by [redacted] after the first seizure and placed in General Order Warehouse.

We conclude from the foregoing that [redacted] intended to smuggle non-visa, 100-percent cotton apparel into the United States in order to avoid quota restrictions and, in addition, intended to avoid the payment of duties on the unmanifested and misdescribed articles, in fraudulent violation of 19 U.S.C. 1592.

Petitioner alleges no violation of 19 U.S.C. 1595a pursuant to which the 321 cases of polyester-cotton jeans with correct visas were seized. These boxes were used to conceal the non-visa merchandise, but (as petitioner contends) are not ejusdem generis with vessels and vehicles subject to seizure and forfeiture under 1595a for their use in smuggling. The terms of the statute are broad, however, referring to any "other thing used in . . . concealing . . . any article which is being or has been introduced . . . into the United States contrary to law . . . ." Customs policy subjects to seizure and forfeiture under 1595a non-prohibited merchandise used to conceal smuggled merchandise. We find, therefore, that the 321 cases of polyester-cotton jeans were properly seized under 1595a. Petitioner also finds fault with Customs for assessing a monetary penalty against these 321 cases under 1595a when the proper remedy is forfeiture. (The 321 cases were released upon deposit of a letter of credit of $52,695.00.) We are not persuaded by this argument especially in view of the fact that the 321 cases of polyester-cotton jeans were falsely described in the entry papers as 2000 in number, subjecting them to assessment for monetary penalty under 19 U.S.C. 1592.

Illegal seizure is also claimed by petitioner on the ground that notice of seizure was defective in failing to state the reasons

Page 908

(3

for seizure, by omitting a description of the acts forming the basis of the alleged violations as well as a breakdown of the loss of revenue attributable to each entry. The language of 19 U.S.C. 1592(c)(5) requires that a written statement containing the reasons for the seizure be issued to the person concerned within a reasonable time after any such seizure is made. Section 162.31, Customs Regulations, contains more precise requirements. The seizure notice in question consisted of a May 20, 1980, letter to petitioner citing the fact of seizure, entries involved, and type of merchandise. Attached was a receipt for merchandise seized which specified the precise contents of both containers, values associated with the merchandise, applicable duty rates, and total loss of revenue of $58,567.48. The statutes violated were cited, and the pre-penalty case number was cross referenced. Further attached was a "Notice of Seizure and Information to Claimants" letter. Within two days thereafter, on May 22, 1980, the cross-referenced pre-penalty notice was issued expounding upon the facts establishing the violation, loss of revenue, and a tentative determination of culpability regarding avoidance of quota requirements and payment of duties. The reasons for seizure were thus made readily apparent to petitioner. [redacted] was not prejudiced, but rather was made fully aware of the circumstances of seizure as required by 19 U.S.C. 1592 within a very short time after seizure was made. Notice was therefore prompt, explanatory, and descriptive, offering avenues of recourse open to petitioner.

In support of its claim of illegal seizure by defective notice, petitioner cites United States v. Eight (8) Rhodesian Stone Statues, 449 F.Supp. 193 (1978), in which a particular Customs seizure notice was held to be inadequate. In that case, however, notice was finally accorded claimant 16 months after seizure. The court stated that the minimum requirements for notice contents are: (1) that a seizure has occurred, describing what has been seized and where; (2) the authority under which the seizure has been made, i.e., the alleged violation of law; and (3) that the claimant has the right to file a petition for remission and mitigation under 19 U.S.C. 1618. The seizure notice before the court failed to contain even these minimum items of information. That is not the case in the matter of [redacted] Petitioner received prompt notice of seizure which exceeded the minimum requirements set forth above. The seizure was therefore legal.

Mitigating factors cited by petitioner include cooperation, inability to pay the assessed penalty amount, and improper Customs action in releasing details of the case to the public. As to the latter charge, we note that criminal indictment of petitioner was a matter of public record. Bad press in this instance therefore cannot be blamed on Customs. Furthermore, whatever cooperation has been demonstrated by [redacted] is cancelled out by a prior violation attributable to the principal officer and stockholder, [redacted]

RELEASED TO THE

who, doing business in 1977 as [redacted] was fined $22,792.00 for failure to declare ornamentation on men's coveralls in violation of 19 U.S.C. 1592. A finding of gross negligence was made.

Financial inability to pay the assessed penalty amount has been claimed. Financial information has been submitted and reviewed by the Regulatory Audit Division at Headquarters which has concluded that over a period of time, 5 years for instance, [redacted] is capable of paying a mitigated penalty amount as set forth below.

The claim for monetary penalty is hereby mitigated to $468,540.00, provided the loss of revenue of $58,567.48 is immediately paid upon liquidation of the subject entries. Payment of the penalty amount may be made by promissory note executed in accordance with Circular FIS-4-A:A:O dated April 26, 1977, and coordinated with the regional financial management division. Following execution of such note, seized merchandise covered by CE 80-109209-7 and CE 80-109199-1 may be released provided petitioner posts a bond equal to the mitigated penalty amount and pays prior to release any costs of hauling and storage associated with the two containers.

Petitioner must comply with this decision within thirty (30) days of notice thereof. Accordingly, please notify petitioner (through counsel), enclosing a copy of this decision with your letter of notification.

03 DEC 1982

HQ 4-02.2 CO:R:E:C
653157 RJP

Dear Sir:

Re: Your May 27, 1982, request for internal advice; your file
R108CT134004

The questions you raise in your request for internal advice concerning temporary importations under bond (TIB) entries and their relationship to potential violations of title 19, United States Code, section 1592, and title 18, United States Code, sections 496, 542 and 1001, have been forwarded from the Carriers, Drawback and Bonds Division to this office for a separate reply.

With respect to title 19, United States Code, section 1592, you ask whether the fact that a TIB importer submitted false documents to Customs containing forged signatures constitutes a violation of section 1592. Specifically, you indicate that [redacted] imported certain articles from Brazil under TSUSA 864.30 duty free as TIB entries. Some of the articles were imported under TSUSA 685.00 as duty paid consumption entries. The TIB entries were otherwise proper except for the fact that in several instances, a Customs Form 3495 (Application for Exportation of Articles under Special Bond) was submitted with a xeroxed (forged) Customs Inspector's Signature.

You also indicate that investigation thus far has revealed that some of the articles imported under TIB entries were subsequently commingled with the duty paid articles and shipped to another location in the United States. However, no hard evidence is presented which establishes that the articles were used domestically, instead of exported according to the terms of the TIB. As indicated by the Carriers, Drawback and Bonds Division, there is no prohibition against shipping articles from one location to another in the United States, so long as there is the ultimate intent to timely export or destroy the articles.

While it is certainly conceivable that an importer could well be liable for a section 1592 penalty in cases involving entry under a TIB, the circumstances and evidence you describe illustrate the difficulties in applying section 1592 to the TIB situation.

First, in order to establish a violation of section 1592, there must be a material omission or false statement. Thus, for example, if merchandise is entered under TIB and circumstances cause the importer to alter his plans for the merchandise and he duly informs Customs of the disposition of the goods, there would be no false statement or material omission and hence no penalty under section 1592.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

653157

It is clear from the facts you describe that [redacted] has not informed Customs of any intention to depart from the terms of the TIP entries in question. But, there is evidence which may indicate that [redacted] never intended to use the merchandise in the manner required under TIP entry (e.g., commingling of TIP articles with duty paid merchandise, forged proof of export documents). At this stage of the investigation, we do not believe that this evidence is sufficient to establish a violation of section 1592. Although the TIP merchandise was commingled with duty-paid merchandise in certain instances, there is no proof that the TIP goods were not timely exported and/or diverted for domestic use.

However, further investigation may reveal a pattern of conduct which demonstrates that the importer never intended to use the merchandise in the manner required under TIP entry, and, in fact, diverted the merchandise for domestic use. In that case, a section 1592 penalty would be warranted on the basis of the fact that the statements made by the importer were false. Consequently, it would be possible to demand a monetary penalty in addition to any liquidated damages under the TIP entry.

With respect to title 18, United States Code, sections 496, 542 and 1001, we recommend that you contact the Regional Counsel in Boston to discuss the applicability of these criminal provisions to the situation you describe.

Sincerely,

(Signed) DONALD W. LEWIS

NOT TO BE RELEASED TO THE PUBLIC

FMF 4-02.2 CO:F:E:C
653362 LR

09FEB 1984

District Director of Customs
Duluth, Minnesota 55802

Dear Sir:

This is in reference to the petition submitted by counsel on behalf of [redacted] requesting relief from a penalty claim in the amount of $50,000, assessed for an alleged fraudulent violation of title 19, United States Code, section 1592 (District Case No. 83-3613-00013).

The case, which involves the importation of a Mercedes automobile from Germany, has been held in abeyance pending review by [redacted] for possible criminal prosecution. By letter dated January 27, 1984 (copy enclosed), our office was advised by [redacted] that although he intends to prosecute [redacted] the importer of record, for his involvement with the importation, no such action will be taken against the owner, [redacted] (According to [redacted] could reasonably argue that [redacted] made all the false statements on this own).

Although the United States Attorney would like to obtain [redacted] cooperation, he recognizes that this is not feasible so long as the $50,000 civil penalty is looking over [redacted] shoulder. Apparently [redacted] is willing to cooperate with the United States Attorney provided the Customs Service assures [redacted] that it will not find higher than negligence in the 1592 penalty action pending against him and that the car will eventually be released to him. [redacted] states in his January 27 letter that he believes that a negligence penalty against [redacted] is a reasonable disposition in the case. Thus, consistent with a reasonable view of the facts and with the need to obtain complete candor, he recommends that Customs impose a negligence penalty against [redacted] Furthermore, he states that if [redacted] speaks candidly and truthfully, he will recommend that the vehicle be returned to [redacted] upon the posting of a bond to assure that the vehicle is brought into compliance.

C8

Upon review of the record, it is our view that at this time there is insufficient evidence of [redacted] involvement in the alleged fraudulent importation to warrant the imposition of any section 1592 penalty against him. At most, we could possibly establish that [redacted] was negligent for permitting the violations connected with the importation of his car to occur. Accordingly, we are in a position to assure [redacted] that we will not find higher than negligence in the 1592 penalty action pending against him, provided he cooperates with the U.S. Attorney. Furthermore, since the evidence establishes that [redacted] is the owner of the vehicle and the U.S. Attorney intends to recommend that the car be released to [redacted] after he cooperates, we are also in a position to advise [redacted] that the car will eventually be released to him.

Based on the above, please advise [redacted] through counsel, only of the following:

1) Upon the receipt of a statement from either the U.S. Attorney or Special Agent [redacted] that [redacted] has spoken candidly and truthfully to the U.S. Attorney about the importation of the 1983 Mercedes Benz automobile, VIN WDB12604412003082, Customs Headquarters will issue a mitigation decision in the related section 1592 action (Case No. 83-3613-00013) finding that [redacted] was no more than negligent.

2) Upon receipt of the above statement, the filing of a proper entry for the vehicle, the payment of duties, the filing of a bond to ensure compliance with EPA/DOT standards, and the payment of all seizure and storage expenses, [redacted] may obtain release of the vehicle under seizure.

If you have questions or comments concerning this action, please do no hesitate to contact us. Enclosed for your records are copies of hold harmless agreements submitted by [redacted] and [redacted]

Sincerely,

/s/ Edward T. Rose

C9

23 AUG 1984

ENF 4-02.2 CO:R:E:C
653597 SLG

Dear [redacted]

This is in response to your letter to the Regional Commissioner of Customs, Miami dated April 3, 1984, and to your telex to the Commissioner of Customs dated April 12, 1984 concerning Customs seizures of wearing apparel in Miami (84-5201-00282) and in Secaucus (84-4601-00182). A response to the above correspondence was not made by the Customs Service prior to your July 27, 1984 letter to the Secretary of Treasury concerning this matter because, as you were advised telephonically, the relevant report of investigation had not been completed.

The seizures in the above cases were made pursuant to title 19, United States Code, section 1592, because the goods, which consisted of men's and women's wearing apparel subject to visa requirements, reportedly had been smuggled into the United States via a diversion of an Immediate Exportation entry by Exporther Bonded Corporation (hereinafter, "Exporther"). In addition, the required visas for importation of the goods into the United States did not accompany the shipments. Consequently, in light of the material omissions in violation of section 1592 (i.e., failure to file entry as required under section 1484, for the subject shipments) seizure was necessary to prevent the introduction of restricted or prohibited merchandise into the commerce of the United States. We are advised further that title 18, United States Code, section 545, also has been included as a basis for the subject seizures. Our discussion herein, however, will address only the propriety of the seizures pursuant to section 1592.

It is your primary contention that the seizures of wearing apparel from the [redacted] and from the bonded warehouse of Exporther in Miami and the seizures of the same type of goods from the [redacted] warehouse in Secaucus were made from an innocent purchaser, your client, [redacted] (hereinafter, [redacted]). Thus, you submit that the seizures were contrary to the provisions under title 19, Code of Federal Regulations, section 162.41(a)(2), that merchandise in the possession of an innocent purchaser, shall not be seized. In addition, you claim that the above seizures were not authorized under section 1592, because these shipments already had been "introduced" into the commerce of the United States. Consequently, you request release of the above shipments to your client for import into the United States, without payment

653597

C10

PUBLIC

of duties and filing of appropriate visas. As to the goods seized while still in Customs physical custody in Miami, you request release to your client for immediate export or for the filing of a duty paid entry.

First, it is our position that textile goods subject to export visas requirements are absolutely prohibited from importation into the United States without the requisite visas at the time of importation. Accordingly, under no circumstances will any of the seized merchandise be released to [redacted] for importation into the United States without the required visas or a waiver thereof by the Government of Taiwan. We believe that our position is supported by the administrative arrangement made between the Republic of China (Taiwan) and the United States to facilitate the implementation of the Agreement on the Trade in Cotton Textiles and the Agreement on the Trade in Wool and Manmade Fiber Textile Products. By letters dated August 16, 1972 and September 20, 1972, the United States and the Republic of China established a visa system whereby

> "Cotton, wool, and man-made fiber textiles and textile products produced or manufactured in the Republic of China and exported to the United States shall be accompanied by an export visa issued by the Government of the Republic of China...." and if such goods "are not accompanied by an export visa... shall be denied entry" by the United States, "except upon specific request by [the Republic of China]".

In light of the above, even assuming arguendo that [redacted] was an "innocent purchaser" of the goods seized in Miami and in Secaucus, section 162.41(a)(2), is of no avail to invalidate the subject seizures. The regulatory history of section 162.41(a), clearly indicates that the provision that merchandise in the hands of innocent purchasers shall not be seized, does not apply to cases where the merchandise involved is prohibited from importation into the United States in the first instance. In discussing the general purpose of section 162.41(a), to avoid the harsh consequences of seizure, the Department of Treasury specifically noted that the regulations were applicable only to "circumstances where absolutely prohibited importations are not involved." (Emphasis added.)(T.D. 77-136 at 261.) Thus, it was recognized that seizure to prevent the introduction of prohibited goods into the United States can be made even when such prohibited goods have been transferred to an innocent purchaser.

653597

NOT RELEASED TO THE PUBLIC

Inasmuch as a material omission (failure to file an entry) had been made in connection with the attempted introduction of prohibited goods into the commerce of the United States, we find that each of the subject seizures was authorized under section 1592, to prevent the introduction of prohibited merchandise "into the customs territory of the United States." (19 U.S.C. 1592(c)(5).) Although the wearing apparel seized from the railway in Miami and from the [redacted] warehouse in Secaucus were beyond the physical control of Customs, they still were under the legal custody of Customs. As merchandise that had been smuggled into the United States via diversion of an Immediate Exportation entry, they remained in "constructive" Customs custody, inasmuch as a "formal release" of the goods which had entered into Customs custody under the Immediate Exportation entry, had not been obtained.

It is well-settled that "imported goods are in the constructive custody of Customs from the moment of their arrival in a United States port until their formal release by the Customs Service, regardless of whether Customs has actual, physical possession." United States v. Slocum, 708 F. 2d 587, 597 (11th Cir. 1983) (Citing the weight of authority on this issue.) In United States v. Slocum, supra, the Court held that a shipment of diseased birds, which by law were condemned to extermination and accordingly prohibited from entry into the United States, remained under Customs custody or control even when they were outside of the physical possession of Customs. Therefore, we find that inasmuch as the goods in this case had not been formally released from Customs custody at the time of seizure under section 1592, was still available as a provisional remedy to prevent the importation of prohibited goods (See S. REP. NO. 95-778, 95th Cong., 1st Sess. 19 (1978).

Notwithstanding your contentions regarding the propriety of the seizures under section 1592, we find with regard to the seizures in Miami, that there is a serious question of whether or not title to these goods had passed to your client at the time of the seizure. Relevant to this issue, the Uniform Commercial Code, [adopted by Florida, New Jersey and New York] provides as follows:

> "Unless otherwise explicitly agreed title passes to the buyer at the time and place at which the seller completes his performance with reference to the physical delivery of the goods,...and... (a) if the contract requires or authorizes the seller to send the goods to the buyer but does not require him to deliver them at destination, title passes to the buyer at the time and place of shipment; but (b) if the contract requires delivery at destination, title passes on tender there." U.C.C. 2-401(2)

C12

053597

Throughout this proceeding, you have represented on behalf of [redacted] that the subject wearing apparel had been purchased on a landed duty paid basis. As evidence of its ownership interest in the seized goods, [redacted] has submitted copies of accounts payable and statements of account from the exporter [redacted] (hereinafter, [redacted]) pertaining to the subject shipments as well as the relevant purchase orders. [redacted] invoices pertaining to the seized shipments also have been reviewed in this regard. In our view, the most important evidence of the terms of the contracts governing the subject shipments are those reflected on purchase orders corresponding to the invoices forwarded with the subject shipments. The terms reflected on the purchase orders for the subject shipments reflect that the goods were to be shipped to New York, with "delivery" to be made in New York on specified dates and that the prices therefor were described as "landed."

Based upon the foregoing evidence of record, we conclude that the contracts represented by the foregoing purchase orders and invoices did require "delivery" of the goods by [redacted] to New York [which reasonably included delivery to [redacted] leased space at the [redacted] warehouse in Secaucus]. In this regard, U.C.C. 2-503(1), provides that "tender of delivery requires that the seller put and hold conforming goods at the buyer's disposition and give the buyer any notification reasonably necessary to enable him to take delivery." Inasmuch as the seizures of the goods in Miami were made prior to tender of delivery to [redacted] as provided under the contract, we cannot conclude that at the time of these seizures, [redacted] had completed its performance under the terms of the contract. To release the goods seized in Miami to [redacted] under the foregoing circumstances would be tantamount to concluding that title to those goods had passed to [redacted] prior to the seizures. Such a conclusion is not supported by the facts.

Although in the absence of specific agreement, the time of payment for goods is not determinative of when title thereto has passed to the purchaser, this fact is relevant to the question of the parties' intent regarding the passage of title. In this case, however, we cannot conclude based upon [redacted] accounts payable and [redacted] statement of accounts, that payment for the goods seized in Miami had been made prior to the dates thereof. First, [redacted] accounts payable ledger cannot be accepted at face value as evidence of [redacted] payments for shipments received from [redacted]. For Example, none of the $71,100, worth of charges reflected on [redacted] statement of account for June 30, 1985, were reflected on [redacted] accounts payable ledger for [redacted]. Secondly, notwithstanding that the [redacted] accounts payable is unreliable as reflecting all of the [redacted] charges incurred, they

653597

C13

still show that as of January 16, 1983, [redacted] owed [redacted] approximately $80,606, for those [redacted] charges that were shown on [redacted] books. More significantly, while Kemtrade's accounts payable show no new charges from [redacted] after January 16, 1984, at the same time they show that two payments to [redacted] in the amounts of $133,920, and $36,873, were made on February 21, 1984, after [redacted] was aware of the seizures of the subject goods in Miami.

In sum, we find with respect to the goods seized in Miami, that there is insufficient evidence to support a conclusion that title thereto had passed to [redacted] prior to January 24, and 25, 1984, the dates of the seizures. Consequently, we cannot authorize release of these goods to [redacted] for export. We find totally irrelevant and self-serving, [redacted] and Exporther's statements, made after the seizures, renouncing their ownership interests in the subject goods. This is especially relevant in light of the fact that the above parties reportedly were responsible for the smuggling or attempted smuggling of the goods into the country, a matter now under criminal investigation. If [redacted] still owned the subject goods at the time of seizure they could be forfeited under section 545 (at least the goods seized at the railway). In the event that some of the goods are not referred for forfeiture under section 545, but rather are held as security for a penalty that may be assessed against the appropriate parties under section 1592, [redacted] may file a petition in connection with that proceeding and obtain release of the goods for export upon payment of security (either by [redacted] or by the party charged with the violation). [redacted] of course, would be required to provide a hold harmless agreement in accordance with 19 CFR 162.75(d)(2)(ii), in light of the fact that the apparent owner of the goods seized in Miami is [redacted]

With respect to the goods seized from the [redacted] in Secaucus, New Jersey, on February 3, and 29, 1984, we are satisfied that title to the subject cartons of wearing apparel had passed to [redacted] by the dates of seizure. Although it is not clear as to whether [redacted] had paid [redacted] for all of the cartons of wearing apparel by the date of seizures, it reasonably clear that in accordance with U.C.C. 2-401(2), [redacted] had completed its performance with reference to delivery of the goods to [redacted] in New York [which included delivery to [redacted] in Secaucus, reportedly authorized to receive shipments for [redacted] since June 1983] as provided on [redacted] purchase orders. In addition, there is no report of either [redacted] involvement in the diversion of the Immediate Exportation entry which resulted in the smuggling of the goods into the United States or [redacted] knowledge thereof. Accordingly, release of the goods seized in Secaucus is authorized to be made to [redacted] without requirement of a security deposit, for export only.

659597

C14

under Customs supervision, unless the appropriate visas or a waiver thereof is obtained from the Government of Taiwan and the goods are formally entered.

After careful consideration of your request and the evidence presented thus far, we have concluded that the goods seized in Secaucus may be released to [redacted] only for export under Customs supervision. There, however, is insufficient evidence of [redacted] ownership of the goods seized in Miami at the time of the seizures. Therefore, at this time we cannot authorize release of the wearing apparel under seizure in Miami to [redacted] The Area/District Directors of Miami and New Jersey will be advised of the foregoing respective dispositions regarding the release of the subject seized goods to [redacted] Moreover, the Area Director of Newark will be advised to obtain a hold harmless agreement from [redacted] before the goods are released.

Sincerely,

John M. Walker, Jr.
Assistant Secretary
(Enforcement and Operations)

653648

District Director of Customs
Portland, Maine 04112

Re: District Case No. 84-00015-00027, [redacted]

Dear Sir:

This is in reference to your letter dated August 9, 1984, in which you forwarded a petition on behalf of [redacted] customhouse broker, requesting relief from a monetary penalty of $291,973, assessed under title 19, United States Code, section 1592.

The record shows that the merchandise was presented for entry at the port of Calais, Maine, with the use of a pro-forma invoice reflecting that the value of the goods was $65,935. The petitioner was identified as the shipper and consigee. No country of origin information was submitted with the invoice. However, three commercial invoices subsequently provided by the truck driver after questioning by the Customs Inspector revealed that the merchandise had apparently originated in Hong Kong, Taiwan, and Korea, and that the required visas were not included with the shipment. These invoices reflected, in each case, that the shipper was a Taiwanese, Korean, and Hong Kong company, and that the consignee was [redacted], a company based in Panama. Closer examination of the shipment revealed that labels describing the originating country as "Lebanon" had been placed over labels showing Korea, Hong Kong, and Taiwan as the country of origin. In addition to the false markings, the merchandise was found to be grossly undervalued. The shipment was seized in order to prevent the entry of prohibited merchandise.

The notice of penalty alleges fraud on the part of petitioner in connection with the attempted entry of this merchandise.

Petitioner denies any interest in the transactions other than as coordinating broker, and rejects any claims regarding its involvement in the alleged violations. Petitioner alleges the following sequence of events with regard to its role in the subject transaction:

By letter dated December 19, 1983, a company called [redacted] requested that petitioner move the goods from Halifax, Canada, to Miami, Florida, in bond. [redacted] advised that 2 containers of merchandise were in Halifax, purchased from a company in Paris, and that [redacted] should place the merchandise under their bond and then "we

D2

will ship it to South America". At this time [redacted] claims that it had no knowledge of an earlier seizure of merchandise at Savannah, also involving the [redacted] family. [redacted] is said to be the controlling stockholder in [redacted]

When the containers were ready to move, [redacted] contacted [redacted] the Customs broker in Miami, to prepare the necessary documents for a Transportation and Exportation entry ("T&E"). However, both the Canadian broker [redacted]) and [redacted] failed to follow instructions. First, [redacted] prepared a manifest and invoice erroneously showing [redacted] as the shipper and consignee. The invoice was also incomplete and failed to provide the country of origin and description of the merchandise, although [redacted] claims that this information was available to [redacted] and had previously been provided by [redacted] and [redacted] Second, [redacted] contends that [redacted] failed to prepare the requested T&E, contrary to its instructions.

In summary, [redacted] claims that it has no proprietary interest in the merchandise; that it was [illegible]ely acting as coordinating broker; that it had never seen the goods, and had assumed the merchandise was properly marked; that as coordinating broker it had no obligation to examine merchandise prior to entry into the United States; that the designation of [redacted] as consignee was erroneous since the intention was to have the goods shipped care of [redacted] on behalf of [redacted] the ultimate consignee in Panama. [redacted] claims that it had no hand in preparing the invoices, handled by [redacted] and [redacted] nor was it responsible for their accuracy.

As support for its claim, petitioner submits in evidence certain telexes between itself and [redacted] regarding the transaction. By telex of December 30, 1983, [redacted] advises [redacted] to move the merchandise in bond to Miami consigned to [redacted] responded on January 17, 1984, that "We must also know ultimate consignee". A third telex from [redacted] discusses rates and provides that this was an "in-bond shipment".

Contrary to petitioner's claims, you question whether a T&E was ever intended. If so, you ask why [redacted] failed to prepare invoices, etc., showing [redacted] as consignee and forward them to [redacted] for inclusion with the shipping documents. You also point out that while [redacted] claims it advised [redacted] and [redacted] of the intended movement in bond, no documentary evidence in this regard is submitted. Rather, both [redacted] and [redacted] (the importing carrier) have denied they were ever advised to enter the merchandise on a T&E. While you take note of references in the correspondence to moving

D3

the merchandise in bond, in your view these references more realistically suggest a request for an Immediate Transportation entry, rather than a T&E. Furthermore, you note that the claimed consignee in Panama has denied any involvement with the subject transaction.

Under these circumstances, you believe that petitioner was the correct shipper/consignee, and failed to exercise due care to assure that proper documentation was provided to Customs at the port of entry. You recommend that the penalty against petitioner be mitigated to $10,000.

While petitioner is unable to satisfactorily explain why its alleged instructions to [redacted] and [redacted] to file a T&E were never communicated, we find no evidence that petitioner was involved in preparation of the false invoices, or was aware of the fraudulent nature of these documents. However, we do find that as coordinating broker, petitioner failed to exercise reasonable care to ensure that the proper entry was filed and the proper consignee shown.

Under the circumstances, the penalty is mitigated to $500. Please advise petitioner of this decision and furnish a copy thereof with your notice.

Sincerely,

/s/ Donald W. Lewis

District Director of Customs
Portland, Maine 04112

Re: District Case Nos. 84-0115-50015 and 84-0115-00027;
[redacted]

Dear Sir:

This is in reference to your letter dated August 9, 1984, in which you forwarded a petition on behalf of [redacted], requesting relief from a monetary penalty of $291,973, assessed under title 19, United States Code, section 1592. The record reflects that the involved merchandise, 595 cartons of women's wearing apparel, is currently under seizure in Savannah, Georgia.

The record shows that the merchandise was presented for entry at the port of Calais, Maine, on February 16, 1984, with the use of a pro-forma invoice reflecting that the value of the goods was $65,935. No country of origin information was submitted with the invoice. [redacted] was identified as the shipper and consignee. However, three commercial invoices subsequently provided by the truck driver after questioning by the involved Customs inspector revealed that the merchandise had originated in Hong Kong, Taiwan, and Korea, and that the required visas were not included with the shipment. These invoices reflected, in each case, that the shipper was a Taiwanese, Korean, and Hong Kong company, and that the consignee was [redacted] Closer examination of the shipment revealed that labels describing the originating country as "Lebanon" had been placed over labels showing Korea, Hong Kong, and Taiwan as the country of origin. In addition to the false markings, the merchandise was found to be grossly undervalued. The shipment was seized in order to prevent the entry of prohibited merchandise.

In order to determine ownership, notices of seizure were sent to various parties, including [redacted] The latter did not respond directly to the notice, however, a company called [redacted] did respond, claiming ownership of the goods, and sought their return. [redacted] also responded, but denied any interest in the merchandise or any connection with the transaction.

Subsequently, pre-penalty and then penalty notices were issued to [redacted] detailing the circumstances of the attempted entry, as heretofore described, and alleging false declarations and material omissions, and violation of title 19, United States Code, section 1592, the culpability alleged was fraud.

DS

The background file reveals that in September, 1983, [redacted] had been involved with the attempted entry of textile merchandise at the port of Savannah under circumstances similar to the instant case. The merchandise was seized and a criminal prosecution initiated. The prosecution resulted in a plea agreement pursuant to which [redacted], who operated [redacted] pleaded guilty to violations of title 19, United States Code, section 542, fraudulent entry of merchandise by means of false declarations and to value.

We note that while [redacted] has not responded directly to the assessed claim, [redacted] has directed a response to the penalty, and, therefore, we are treating their reply as a petition on behalf of [redacted]. In this regard, the record is unclear as to the exact relationship between [redacted] and [redacted]. However, [redacted] advises that [redacted] the father of [redacted] is the controlling stockholder in [redacted], and that the [redacted] are also stockholders in [redacted] also advises that were it not for the seizure in Savannah, the paperwork would have reflected [redacted] as the shipper, and [redacted] as the consignee, [redacted]

In its explanation of the transaction, [redacted] advises that the goods were originally intended to be shipped in the same manner as the goods seized in Savannah. However, when Customs made its Savannah seizure, it was decided not to disembark in the United States, and thus a bill of lading was issued reflecting [redacted] as shipper and [redacted] as consignee (rather than [redacted] and [redacted] as shipper and consignee, respectively). Sometime after the goods arrived in Halifax, Canada (October 17, 1983), a buyer in Panama, [redacted] was located. Since the cost of shipping by vessel from Halifax to Panama was too expensive, it was decided to have the goods moved by truck from Halifax to Miami, and from that point by vessel to Panama. Thus, the shipment was to move in bond through the United States, and at no time did petitioner intend that the merchandise enter the commerce of the United States. However, [redacted] also claims that [redacted] incorrectly prepared the paperwork, so that the documents failed to reflect that the shipment was to move in bond, with the ultimate desti-nation [redacted]. The petitioner includes in evidence the following documents in support of its claim:

1) A letter dated December 19, 1983, in which [redacted] advises [redacted] of the merchandise in Halifax, to place it under their [redacted] bond, and that subsequently "we will ship it to South America".

D6

2) A telex dated February 9, 1984, from [redacted] to [redacted] advising of cost problems with a freight forwarder because this was an in-bond shipment;

3) A letter dated March 5, 1984, in which [redacted] advises [redacted] that the goods were mistakenly consigned to [redacted] rather than [redacted] that the merchandise should have been sent in-bond, and it was never intended to enter the commerce of the United States;

4) Copy of a bill of lading reflecting [redacted] as shipper to [redacted] in Halifax;

5) Shipper's manifest from [redacted], [redacted] to [redacted] reflecting that the shipment was to be in-bond.

Contrary to petitioner's claims, you question whether a T&E was ever intended. If so, you ask why [redacted] failed to prepare invoices, etc., showing [redacted] as consignee and forward them to [redacted] for inclusion with the shipping documents. You also point out that while [redacted] claims it advised [redacted] and [redacted] of the intended movement in bond, no documentary evidence in this regard is submitted. Both [redacted] and [redacted] (the importing carrier) have denied they were ever advised to enter the merchandise on a T&E. While you note references in the correspondence to movement of the merchandise in bond, in your view these references more realistically suggest a request for an Immediate Transportation entry, rather than a T&E. Furthermore, you note that the claimed consignee in Panama, [redacted] has denied any involvement with the subject transaction. You also believe that [redacted] was the true owner of the merchandise, and that the false declarations as to country of origin and value was the result of fraud on the part of [redacted]

With regard to [redacted] you question the bona fides of this petitioner's claimed ownership of the merchandise, since the only evidence of ownership submitted is a bill of lading. You believe that [redacted] became involved only because of [redacted] problems with Customs in Savannah. You also note certain inaccuracies or contradictions in this petitioner's response which reflect upon its credibility. Thus, while [redacted] claims that a buyer (allegedly [redacted]) was located sometime after October 17, 1983 (after the goods arrived in Halifax), the commercial invoices found with the shipment reflect that [redacted]

DM

as the consignee was known in August and September 1983. There is also evidence that at least one these invoices was fraudulent not only as to value, but also as to the shipper involved. Based on all of these factors you recommend that the [redacted] petition be denied.

Initially, we note that petitioner has not challenged the assertions set forth on the notice of penalty with regard to the alleged false invoicing, false labeling, material omissions, etc. Rather, petitioner has sought to circumvent these issues by contending that the merchandise was intended to be transported through the United States via a T&E entry, and was not intended to enter the commerce of the United States. However, this intent was said to be thwarted due to the negligence of the coordinating broker, [redacted]

While there is evidence which tends to show that the petitioner intended to enter the merchandise on a T&E entry, this intention, even if established, is not proof positive of the fact that petitioner intended to ship the merchandise in transit through the United States. In fact, the alleged consignee's disclaimer of any involvement with the transaction leads to the inference that had the goods been entered on a T&E, a diversion into the commerce of the United States would have occurred. This inference is supported by the record and reputation of the involved principals.

In conclusion, we find that whether or not a T&E was ever intended, petitioner's intention was to enter the merchandise into the commerce of the United States by means of false and fraudulent declarations, and material omissions, as set forth on the notice of penalty. Under these circumstances, the claim against [redacted] is mitigated to $160,205, an amount equal to 80 percent of the dutiable value ($200,256) of the merchandise. This is in accordance with our guidelines involving fraudulent, non-revenue loss violations, and is conditioned upon payment of storage and transportation charges, and exportation of the merchandise under Customs supervision. In addition, the merchandise should be released to [redacted] for exportation only upon adequate proof of ownership.

Sincerely,

[redacted]

SUBJECT: Wearing Apparel under Seizure in San Francisco District
Case No. 84-2808-00109

This is in reference to the request from counsel for the importers of the above seized wearing apparel, [redacted] et al. and [redacted], for permission to export the seized goods. The seized goods consist of ladies wearing apparel containing 50 percent or more cotton by weight, which were falsely labeled and described as having fiber content of less than 50 percent cotton by weight (e.g., 55 percent linen and 45 percent cotton). As garments with more than 50 percent cotton by weight, they were subject to a duty rate of 16.5 percent ad valorem instead of the duty rate of 5.3 percent, as entered. Since they were imported from China, Hong Kong, Taiwan, Korea and Macau, the garments also were subject to textile quota and visa restrictions.

[redacted] through counsel, have waived their rights to timely issuances of seizure and prepenalty notices, until the matter of releasing the seized goods for export has been reviewed by Headquarters. As we advised in our telex to all field offices dated September 18, 1984 (653682 SLG), textile quota goods seized for violation of title 19, United States Code, section 1592, should not be released, even for export, without the deposit of security in an amount not to exceed the maximum penalty that may be assessed for the violation pertaining to the seized goods.

Notwithstanding the current waivers of notice rights by the importers and the ongoing foreign investigation on this matter, it is not advisable to withhold issuance of a seizure notice and notice of the required security deposit, any longer. Based upon the evidence developed thus far, it is recommended that a deposit in an amount equivalent to a maximum penalty for a gross negligence violation, be required for release of the goods seized in this case. The required deposit, of course, would be based upon a gross negligence penalty attributable only to the

653678

D9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

goods under seizure. [It appears from the record that a penalty claim against the importers also would include goods already released from Customs as well as goods that were not entered but authorized to be exported; the value and/or loss of revenue attributable to these goods, however, would not be computed in determining the security deposit required for releasing the seized goods.]

With respect to the alleged violations and seizure, counsel for the importers essentially claims that his clients fulfilled their obligations to exercise due care in entering the subject garments, notwithstanding that Customs has determined that fabric contents described on the invoices as well as on the labels were false. In this regard, counsel has presented numerous telexes between the importer, [redacted] and its Hong Kong agent, [redacted], wherein [redacted] is shown to have stressed to Colby & Staton, the importance of ensuring that the fabric content consisted of chief weight, ramie, as opposed to cotton. Counsel also has presented copies of laboratory tests supposedly performed on the fabric prior to the subject importations, which showed a chief weight content of ramie [although the laboratory report of testing performed at the China Textile Testing and Research Center is dated December 9, 1972]. Counsel further claims that both the importers and their agent, [redacted] relied upon the results of the tests in claiming to Customs that the garments were chief weight, ramie.

Our review of the documents forwarded by counsel for the importers confirms that [redacted] (Hong Kong) was advised by [redacted] that articles containing more than 50 percent cotton by weight were subject to quota and visa restrictions and that fabric with more than 50 percent ramie should be used. Nevertheless, it appears from the facts developed thus far, that [redacted] was the primary buying agent for the importers' shipments from the Orient and reportedly was responsible for (1) placing the importers' orders with the mills for the fabrics, (2) placing the importers' orders for the garments with the manufacturers, as well as (3) shipping the finished products. Moreover, telexes such as the following from [redacted] (Hong Kong) dated October 7, 1983, suggest that [redacted] was delegated specific responsibility regarding the fabric weight content of the garments.

> "... THE WEIGHT OF THE RAMIE VS. COTTON IS ALSO CALCULATED N IF CTN CONTENT MORE THEN VISA IS REQUIRED U MUST FIGURE OUT THE WEIGHT AS WELL AS PX N ADV WE REALIZE IT SOUNDS MORE N MORE COMPLICATED HOWEVER, THIS IS WHAT IS REQUIRED N THE FAB SUPPLIERS DEFINITELY SHLD HV THE INFO U NEED TO FIGURE THIS OUT PLS RESPOND GERI"

THIS DOCUMENT HAS BEEN RELEASED TO THE PUBLIC

D10

Even if [redacted] did not have actual knowledge of the true fabric content of the subject seized articles which were falsely labeled, they had the ability to obtain this information prior to shipment of the merchandise. The fact that the fabric content by weight as indicated on the garments were so grossly disproportionate to the actual content demonstrates in our view a wanton disregard on the part of [redacted] for the relevant facts as well as a disregard for its legal obligations. Evidence as to whether or not there also was intent to violate the law or defraud the revenue may be established by the ongoing foreign investigation.

Reportedly, [redacted] has admitted that in connection with the subject shipments [redacted] selected the manufacturers and obtained the sample of fabrics pursuant to styles, fabrics, and prices specified or approved by [redacted]. Moreover, Tres [redacted] admitted that it is [redacted] only customer in the United States and that [redacted] has offices in every country in which [redacted] does business. Thus, [redacted] hardly can deny at this point that [redacted] was its buying agent with respect to the subject import transactions. Although the facts developed thus far do not clearly reveal the direct relationship between [redacted] reportedly admitted that the subject importations represented a joint venture between [redacted] For a 15 percent commission to cover expenses and profit, [redacted] selected the styles, colors, etc., of the garments and sent the orders to [redacted] while [redacted] in turn issued the letters of credit covering the orders.

It is well-settled that the acts and culpability of an agent, such as [redacted] acting within the scope of its authority in connection with an import transaction, may be imputed to a principal, importer, such as [redacted] for purposes of determining liability under section 1592. See Clicquot's Champagne 70 U.S. 114, 141-144 (1865). In light of our conclusion that there is reasonable cause to believe that the false descriptions and labels resulted from gross negligence on the part of [redacted] there is sufficient grounds for demanding a security deposit from [redacted] principals in these transactions, in an amount commensurate with this degree of culpability. In the event that evidence establishing greater culpability is developed prior to the issuance of the penalty notice, the fact that a security deposit based upon gross negligence has been demanded for releasing the seized goods would not preclude issuance of a penalty claim in an amount based upon the degree of culpability established by the evidence.

10 DEC 1984

ENF 4-02.2 CO:R:E:C
653701 RJP

District Director of Customs
Houston, Texas 77052

Dear Sir:

Your memorandum dated October 1, 1984, forwarded the petition submitted on behalf of [redacted] (petitioner), requesting relief from a claim for monetary penalty of $302,967.76, assessed for an alleged violation of title 19, United States Code, section 1592, in Houston District Case No. 84-5309-51025. The alleged violation was determined to have been the result of fraud, and involved four immediate delivery ("ID") entries consisting of 13 cases of watches imported into the United States in 1984.

The basis for the alleged violation involves petitioner's false certification regarding the country of origin marking for the subject watches. Upon presentation of the subject ID entries to Customs, requests were submitted to move each shipment to the petitioner's premises for marking. Each request was granted by Customs. Subsequently, one of petitioner's employees certified to Customs on each Customs Form 4647 that the marking of the watches had been completed. Customs inspectors visited the petitioner's premises and, upon inspection, discovered that of the total of 3509 watches covered by the four ID entries, 2500 watches had not been marked. Because petitioner had certified that the marking of the watches had been completed, when in fact, it had not, Customs initiated the instant penalty case. (We note that consumption entries were filed for the subject watches and that the appropriate duty has been paid, therefore, no loss of revenue is involved in the case.)

With respect to the section 1592 action before us, a pre-penalty notice alleging fraud was issued to the petitioner on May 14, 1984, and a response was submitted on May 17, 1984. After consideration of the response, a no-change penalty notice was issued by Customs on June 6, 1984. The instant petition has been submitted for our consideration, and petitioner's claims are set forth below.

First, petitioner claims that Customs has failed to identify the unmarked watches as those described on the consumption entries subject to the instant penalty action, and that these unmarked watches may have been domestic purchases...i.e., not subject to marking requirements. Further, petitioner indicates that because Customs inspectors found many marked as well as unmarked watches, Customs is incorrectly penalizing petitioner for those watches which had been properly marked.

D13

Second, petitioner maintains that the failure to properly mark the watches (if in fact they required marking), resulted from an innocent mistake, in that petitioner's employees who certified the goods as being properly marked, reasonably believed the merchandise had been so marked. According to petitioner, when its owner was overseas, the owner phoned one of petitioner's employees responsible for marking and inquired whether the subject shipments were "ready to go" (i.e., were they marked?). The employee told the owner "yes," because the employee was aware that the watches were located in the storage area where watches were put after marking. The owner then informed the employee who handled Customs matters for the petitioner that it was appropriate to certify to Customs that the watches had been marked.

Petitioner cites its unblemished prior record with respect to Customs marking requirements, and requests that the penalty claim be cancelled, either because Customs failed to identify the watches examined as those corresponding to the entries in question, or because the failure to mark was merely the result of inadvertence on the part of an employee acting in good faith.

Our review of the evidence in this case leads us to conclude that petitioner's claims are unsupported by the record. The file reveals that petitioner kept a tight inventory control, and the petitioner's owner has stated that "a shipment is kept together and when it is ready for marking, it is moved into the marking room, and when the marking is over, the shipment is moved into a separate area." This statement, coupled with the lack of evidence that the unmarked watches were of domestic origin, indicates that it would not be expected that petitioner would have mixed a shipment not yet released by Customs with a domestic shipment. Moreover, in a letter presented to a Customs Inspector, the petitioner's owner stated that the "unmarked 2500 watches are from the 4 April shipments" (i.e., the shipments subject to the instant penalty action). The record also reveals that at the time of Customs inspection, petitioner's owner initially produced marked watches which he selected from boxes identified with a red mark. Subsequently, petitioner's owner attempted to conceal the unmarked watches which were discovered in unmarked boxes in a separate room. The file reflects that the behavior of petitioner's owner during the course of the inspection does not support a claim that the failure to properly mark was an inadvertent employee error or mistake. Also, we note that petitioner's prior marking record is not relevant to the instant case, inasmuch as Customs had not verified petitioner's previous importations. Finally, the proper marking of a minority of the subject watches does not obviate the falsity of petitioner's certification that the goods in question were correctly marked.

D14

In view of the above, we agree with your office that petitioner committed a grossly negligent violation of title 19, United States Code, section 1592, in that petitioner certified to Customs that the shipments were properly marked, when in fact, they were not. The penalty incurred under section 1592 will be remitted upon payment of $121,187.

Please notify petitioner (through counsel) of this decision, and enclose a copy of this letter with your notification.

Sincerely,

(Signed) Edward T. Rose

ENF 4-02.2 CO:R:E:C
653711 SLG

653711

District Director of Customs
Ogdensburg, New York 13669

Dear Sir:

This is in reference to the supplemental petition filed by the firm of [redacted] on behalf of [redacted] ("petitioner"), requesting further relief from the penalty assessed in the amount of $553,850, for violation of title 19, United States Code, section 1592 (Ogdensburg District Case No. 83-0701-50019).

The penalty was assessed because petitioner, allegedly as a result of fraud, entered shipments of sugar into the commerce of the United States during the period of November, 1977 through January, 1978, by means of false contract claims. Petitioner falsely claimed that shipments of sugar identified in the penalty notice, were being entered to fulfill contracts that were executed prior to November 11, 1977, the effective date of Presidential Proclamation No. 4539 (42 Fed. Reg. 59039, November 15, 1977). Inasmuch as the higher duty rates for sugar imposed under the foregoing proclamation applied to the subject entries, if they, in fact, were not covered by a contract entered into prior to November 11, 1977, the false claims in this case resulted in an actual loss of duties of $15,458.97, a potential loss of duties of $53,772.38, for a total loss of duties of $69,231.35. Based upon determinations made in the previous decision, however, the amount of the actual loss of duties has been adjusted to $15,170.93.*

By our decision dated January 17, 1984, the following findings of facts and conclusions of law were made:

1. The [redacted] Confirmations, which petitioner claimed with respect to 96 of the 123 entries involved in this case, were not the actual contracts under which the shipments were made;

*Due to a arithmetical error the previous decision cited $14,788.43 as the adjusted actual loss of revenue amount because the amount of $670.54, instead of $288.04, was mistakenly subtracted from the original actual loss.

E2

2. The true contracts covering the subject shipments represented the terms of sale reflected under the numbers and dates recorded in petitioner's contracts ledger and on the R.F.Q.'s, which petitioner claimed represented "calls" against "master contracts;"

3. Petitioner's claims of the [redacted] Confirmations as pre-November 11, 1977, contracts covering the subject shipments were made as a result of petitioner's intent to defraud the revenue;

4. Petitioner's claims of [redacted] Confirmation numbers, 7054, 7060, 6868, 6982, 6946, with respect to the remainder of the entries involved in this case also were false either with respect to the identities of these contracts as covering the shipments or with respect to the dates indicated for these contracts; and

5. Finally, with the exception of the entries covered by the claimed contract 6868, there was sufficient evidence that the false contract claims involving [redacted] Confirmation numbers also resulted from petitioner's intent to avoid payment of the higher duties imposed under the Proclamation.

On supplemental, petitioner essentially claims as follows:

1. Petitioner has not been provided a fair opportunity to make a reasonable response to the allegations in this case due to a claimed insufficiency of the facts provided by Customs prior to the initial decision and a claimed bias in the Customs investigation;

2. The entries made under [redacted] Confirmation numbers 6982, 6946, 7060, and 7054, were properly claimed as covered by contracts made prior to November 11, 1977;

3. The 7000 series [redacted] Confirmations represented the true contracts covering the remaining entries in this case against which the 7000 series calls were made; and

4. Even assuming arguendo that the [redacted] Confirmations were not contracts, they were reasonably believed to have represented binding commitments made prior to November 11, 1977, for the purchase of the subject sugar.

At the outset it must be stated for the record that we find no merit in petitioner's claim (1) above. First in our view, the penalty notice sufficiently provided notice to petitioner or the

charges alleged by Customs with respect to petitioner's importations of sugar into the United States. Secondly, petitioner has not demonstrated that it has been prejudiced by the lack of facts not disclosed until the initial decision in this case. Moreover, petitioner was one of the first parties interviewed during the Customs investigation which began around mid-1978, almost five years before the penalty notice was issued in this case. Our record of those interviews reflect that petitioner was aware, long before the initial decision in this case, of the entries involved and nature of the Customs problem relating thereto. Finally, there is no merit in petitioner's claims that the Customs agents "either ignored or refused" certain "exculpatory documentary evidence". As will be later referenced in some instances herein the Customs agents affirm all facts reported and previously discussed in our initial decision in this case. Petitioner should be advised, however, that the ten-page initial decision hardly could be proffered as an outline of the 57-page initial report of investigation, the 10 page report on the initial petition, as well as collective documentary exhibits, "A" through "GG" that we have considered in this proceeding. Hence, we are confident that this is <u>not</u> a case where the Customs agents "either ignored or refused" during the investigation any documentary evidence, exculpatory or otherwise.

[redacted] <u>Confirmation Contract Claims</u>

With respect to the [redacted] Confirmation type contract claims (item 2 of petitioner's supplemental claims), in our initial decision we found:

> 1) Contract 7054 covering shipments to [redacted] and contract 7060 covering shipments to [redacted] actually were made on November 15 and 18, 1977, respectively, rather than on November 7 and 8, 1977, as claimed by petitioner; 2) Some of the shipments to [redacted] claimed as covered by contracts 6946 and 6982 [contracts actually made prior to November 11, 1977], in fact were covered by contract 7096, made after November 11, 1977; and 3) Shipments to [redacted] under entries 112220, 112221, and 111525 that were claimed by petitioner as covered by contract 6982, actually represented "Spot" shipments, not covered by any contract.

There was no finding in our initial decision that contracts 6982 and 6946 were backdated.

E4

It is our position that petitioner has not presented any evidence on supplemental to refute the basis for the foregoing findings of facts. Concerning contracts 7054 and 7060, petitioner now claims that the foregoing agreements were reached on November 7 and 8, 1977, with the price terms to be determined on the dates of the calls from [redacted] for deliveries. Thus, as has been similarly claimed with respect to petitioner's [redacted] Confirmation contract claims, petitioner now claims that the dates of November 15 and 16, 1977, noted on the Refined Futures Quotation (R.F.Q.'s) and in its contract ledger, represented the dates of calls against contracts 7054 and 7060, which themselves were made on November 7 and 8, 1977.

Concerning contract 7054, we find unpersuasive on the foregoing claim petitioner's submission of a copy of 7054 which has been signed by the customer and which shows the date of November 7, 1977. Petitioner admits that the contract was not "written up" until November 15, 1977. More importantly as to having agreed even orally on November 7, 1977, to purchase sugar from petitioner at an LDP (London Daily Price) + points price, [redacted] of [redacted] specifically advised Customs during the investigation that he had no recollection of making an LDP + 766 points price arrangement covering shipments from petitioner,* but commented that such arrangement might have resulted from "blind booking" by a broker. Therefore, based on record of the Customs interview of [redacted] in January 1979, we find that petitioner's present claim that [redacted] (petitioner's employee) and [redacted] made an oral agreement on November 7, 1977, to purchase up to 195,000 kilo grams of sugar at an LDP + points price, is not substantiated.

As with respect to both contract 7054 and 7060, the Customs agents affirm their original report that both [redacted] and [redacted] of petitioner's company stated during the investigation that the dates of November 7 and 8, 1977, shown on the contracts, were not correct. More significantly, on November 29, 1978, [redacted] reportedly presented to the Customs agents, three entries claimed under contract 7060 that had been entered previously at the pre-proclamation duty rate, which he stated should have been dutiable at the post proclamation duty rate. Thus, petitioner's claims on supplemental that contracts 7054 and 7060 were made on November 7 and 8, 1977, not only are refuted by the documentary evidence in petitioner's contract ledger and R.F.Q.'s but also by the previous statements and

*These were the terms of [redacted] Confirmation 7520, also claimed by petitioner for a shipment to [redacted]

ES

actions of petitioner's employees and customer. In view of the foregoing, we affirm our decision that petitioner's presentation of the false dates for contracts 7054 and 7060, resulted from its intent to avoid payment of the higher duties under the proclamation.

We also cannot accept petitioner's present contention that it did not act with intent to avoid the higher duties in falsely claiming that certain shipments to [redacted] were covered by pre-November 11, 1977, contracts 6982 and 6946, when in fact they were covered by contract 7096 (December 13, 1977). Petitioner states on supplemental that it did not realize that contracts 6946 and 6982 were filled until after the shipments were sent. The billing invoices covering the above shipments showed the correct contract number, 7096. These billing invoices, however, are dated December 16 and 21, 1977, when as late as January 19, 1978, petitioner (through its agent [redacted]) claimed in a letter to Customs that entry 112520 dated December 15, 1977, and made under the 6982 con tract claim, was covered by a contract entered into prior to November 11, 1977. It appears that around January 31, 1978, a copy of contract 6982 was forwarded in response to the specific request for such from Customs. Thus, even after petitioner's own record reflected that it knew that the shipments were covered by contract 7096 (dated December 13, 1977), petitioner not only did not advise Customs of the true contract but also took deliberate steps to ensure that Customs liquidated the entry at the pre-proclamation duty rate on the basis of their previous false claim that the shipment was covered by a pre-November 11, 1977, contract. In view of the above, we affirm our decision finding fraud with respect to petitioner's false contract claims for shipments made under the above entry (112520) as well as the others involving false contract claims of 6946 and 6982 for petitioner's shipments to [redacted] that actually were covered by contract 7096 (113280, 113281, and 113385).

We also find no support for petitioner's present contention that the shipments to [redacted] under 112525, 112220, and 112221, actually were covered by contract 6982 as claimed, but merely were billed at "spot" prices at the request of [redacted] made after the shipments were sent. As stated in the initial decision, neither the billing invoices nor the bills of lading for the above shipments reflected either a contract number or a running contract balance. In addition, there was no reference to a [redacted] 2360-purchase order number, which petitioner has claimed corresponded to pre-November 11, 1977, contract 6982.

E6

Moreover, in contradiction to the foregoing claims by petitioner is the fact that petitioner billed [redacted] at prices which included the higher post-proclamation rate of duty. Even after the date of the billing invoice (November 28, 1977) for the shipment covered by entry 111525, reflecting prices which included the higher duty rate, petitioner persisted in its attempts to convince Customs to liquidate the entry at the pre-proclamation rate of duty based upon the false contract claim. By memorandum dated January 30, 1978, to [redacted] subject: "Exemption from Increased Duty Rates", petitioner provided a list of orders shipped after November 11, 1977, which cited contract 6982 for the shipment covered by entry number 111525. Hence, petitioner charged [redacted] prices which included the amount of duties properly owed on the post-proclamation transaction and then, subsequently, tried to get Customs to liquidate the entries on the basis of a false claim of a pre-proclamation contract. In view of the above as well as other evidence in the record, we affirm our previous decision that 1) the shipments entered by petitioner under cover of entries 112220, 112221, and 111525, represented spot shipments, falsely claimed as covered by contract 6982, and 2) these false contract claims resulted from petitioner's intent to defraud the revenue.

[redacted] Confirmation Contract Claims

As to the shipments for which petitioner claimed [redacted] Confirmation numbers as the applicable contracts, we found in our initial decision that the true contracts governing these shipments were represented by the terms recorded in the 7000 series entries of petitioner's contract ledger and corresponding R.F.Q.'s. On supplemental, petitioner has not presented any evidence that would persuade us to change these findings.

Primarily, it should be noted that petitioner's latest claim, that the R.F.Q.'s never were prepared for calls against a contract with a pre-determined fixed price, is directly refuted by the record. The record at Customs Headquarters alone reflects that R.F.Q.'s were prepared by petitioner in connection with at least the following contracts which did not provide for a variable price term, but rather a fixed unit price per 100 pounds of sugar: 6868, 6917, 6927, 6946 and 7038.

Secondly, we still find no merit in petitioner's claim that an analogy of its "C" and "V" Canadian contracts to the [redacted] Confirmations supports the conclusion that the latter represented the contracts under which the shipments in this case were made. With regard to the lack of references to the [redacted] Confirmations

in the contract ledger, petitioner claims that the cross-references between "C" and "V" contracts, which we noted in our previous determination, were not made as a general practice. Even accepting as true, the foregoing statement, it remains our opinion that the "C" and "V" contracts were separate and distinct from one another: the shipments by petitioner were made pursuant to either the "C" contract or the "V" contract. Hence, assuming arguendo that the transactions covered by the 7000 series numbers were related to the [redacted] Confirmations and that the [redacted] Confirmations represented actual contracts, we still would conclude that the shipments in this case were made pursuant to the new and separate agreements represented by the 7000 series transactions entered into petitioner's contract ledger.

As was noted in our initial decision, in addition to the fact that the 7000 series numbers were reflected in the contract blocks of the bills of lading and billing invoices relating to the subject entries, the quantity of the "balance of contract" shown thereon always corresponded to the remainder of the total quantity reflected in the contract ledger for the applicable 7000 series number and on the applicable R.F.Q. Moreover, based upon the records obtained during the investigation, it appears that the prices shown on the R.F.Q.'s rarely were calculated under the "LDP + 766 points" formula reflected in the [redacted] Confirmations. A review of the approximately 40 R.F.Q.'s in the record pertaining to [redacted] Confirmation numbers revealed only two instances where a net margin of $7.66, over the LDP, was used to determine the unit prices.* Hence, in further consideration of the record in this case, we find that petitioner has not presented sufficient evidence to support its threshold contention that the [redacted] Confirmations represented commitments made prior to November 11, 1977, by the customers identified therein to purchase sugar for delivery during the fourth quarter of 1977. On the other hand, we affirm our previous findings that the record does show that true contracts covering the shipments entered by petitioner under the [redacted] Confirmation contract claims, represented the dates and terms corresponding to the 7000 series numbers recorded in the normal sequence of petitioner's contract ledger.

---

*1) R.F.Q. for contract 7099 covering shipments to [redacted] which petitioner has claimed under [redacted] Confirmation 7531 and 2) R.F.Q. for contract 7093 covering shipments to [redacted] claimed under [redacted] Confirmation 7501.

ES

653711

On supplemental, petitioner has claimed with precision as to the time and date (5:30 p.m., November 10, 1977), that by telex [redacted] confirmed "that various customers had agreed to purchase sugar for the fourth quarter of the year" and that based on the "broker's written assurances"... [it] "reasonably believed...that its offers had been accepted by the various customers indicated on the [redacted] telex and corresponding confirmations". In addition to the fact that no evidence of such written assurance or confirmation from the broker has been submitted by petitioner, petitioner's present claim of total reliance upon [redacted] (broker) is inconsistent with statements made in the petitions as well as with those made by [redacted] of [redacted] repeatedly has claimed just as petitioner that both [redacted] and petitioner contacted the customers identified in the [redacted] Confirmations presented to Customs, prior to November 11, 1977, and received agreements to purchase sugar. More significantly, in our view, none of the customers identified in the [redacted] Confirmations who were interviewed either by Customs or by petitioner either have stated that the agreements purported to be reflected by the [redacted] Confirmations were made prior to November 11, 1977, or in any other way have supported petitioner's contention of having reasonably believed that the [redacted] Confirmations were pre-November 11, 1977, "contracts".

Petitioner has submitted on supplemental an affidavit from [redacted] wherein she states that she "recall[ed] retrieving a copy of the [redacted] Confirmation number 7500 from [redacted] files and offering it to the investigating Special Customs Agents." The foregoing statement, however, is directly contradicted in the record, which reflects that while during the Customs interview of [redacted] and [redacted] on January 23, 1979, bills of lading showing [redacted] Confirmation number 7500 in the "special instructions" blocks were provided, a copy of the [redacted] Confirmation, itself, neither was provided nor discovered by Customs at that time. Customs was advised by [redacted] [who stated that he never had seen nor known of [redacted] Confirmation 7500] during a September 16, 1978, interview that the person in charge of purchasing for [redacted] during the period of the subject shipments was no longer with the company. [redacted] who was not in charge of purchasing and who now states that it was not unusual for [redacted] to purchase sugar at "a market price, e.g. #11 or LDP, plus a refining margin, e.g., 766 points", however, was unable to verify from a review of the relevant purchase orders during the Customs interview on January 23, 1979, whether or not the LDP even was used during the period the subject entries. In view of the foregoing, we

F9

find that the affidavit by [redacted] submitted by petitioner on supplemental does not support petitioner's contentions that the [redacted] Confirmations constituted pre-November 11, 1977, contracts or that petitioner reasonably believed such.

The representative from the single company that did have a [redacted] Confirmation (unnumbered) on hand,* [redacted] of [redacted], could neither explain the meaning of the pricing formula, "LDP + 766 points" stated therein nor confirm when the purported purchase agreement was made. Although [redacted] advised that [redacted] orders from petitioner were placed through [redacted] Confirmations covering [redacted] purchase orders filled by petitioner's shipments under [redacted] Confirmation 7531, however, did not reflect any terms even remotely related to those of the [redacted] Confirmation. [redacted] Confirmation 7531 called for 8,000 bags of sugar to be shipped on an LDP + 766 points basis, while [redacted] Confirmation No. DY 7066 and [redacted] purchase requisition 17624 both of which were dated November 16, 1977, called for the shipment of five truckloads (475 bags/load) at the fixed price of $.1755 per pound and $15.48 per bag. In fact, rather than the 766 points over LDP specified in [redacted] Confirmation 7531, petitioner used a net margin of $8.60 over LDP to fulfill [redacted] purchase order 17624. It is hardly likely that [redacted] would have paid the foregoing price for its purchase order 17624, if it perceived the order to have been made pursuant to a contract calling for a lower margin (766 points) over LDP.

It remains our opinion that as was done with respect to a few other R.F.Q.'s in the record, petitioner's notation of [redacted] Confirmation 7531 on the R.F.Q. corresponding to the true contract covering its shipments to [redacted] (7057 dated November 16, 1977), was made primarily for the purpose of ensuring that a pre-November 11, 1977, contract was claimed to Customs in order to avoid the impact of the Proclamation. As was noted in our initial decision, our records reflect that at least one R.F.Q. noted in the remarks sections thereof, a [redacted] Confirmation number representing a contract made prior to November 11, 1977 (e.g. R.F.Q. for contract 7064 dated November 18, 1977, showed a "reference to e-7018-0", dated October 31, 1977). Notwithstanding the foregoing, however, we recognize

*This [redacted] Confirmation (7531) was produced two weeks after the initial Customs interviews of petitioner as well as other customers concerning the [redacted] Confirmations.

E10

that as to the false [redacted] Confirmation contract claims made by petitioner at the time of entry*, the evidence established thus far, might not be considered "clear and convincing" as to petitioner's intent to defraud the revenue or otherwise violate the laws.

On the other hand, we find that the evidence of record is overwhelming that petitioner acted with actual knowledge of or wanton disregard for the fact that the [redacted] Confirmations did not represent contracts covering most of the shipments in this case, and with a disregard for its obligations under the laws requiring true facts to be reported to Customs. Compelling evidence the foregoing can be noted from the following facts inter alia, established in the record:

1) While [redacted] Confirmations were claimed to Customs petitioner always indicated the true contracts in the "contract" blocks of both the relevant bills of lading and billing invoices;
2) At the same time, petitioner indicated a [redacted] Confirmation number in the "Special instructions" block on some of the relevant bills of lading; and
3) Petitioner at all times referenced on the bills of lading as well as on the billing invoices, as the "balance of contract", the quantity outstanding under the 7000 series contract reflected in the contract ledger, as opposed to any quantities indicated on the [redacted] Confirmation.

Decision

In view of our finding that petitioner's false claims involving the [redacted] Confirmations resulted from at least gross negligence, the penalty assessed against those entries filed with false [redacted] Confirmation contract claims is mitigated further on this basis. In accordance with the foregoing determinations the instant penalty claim is mitigated further to the amount of $340,416, provided that the actual loss of revenue amount of $15,170.93, is deposited as withheld duties.

*Petitioner during the penalty proceeding changed some of its false contract claims that were not [redacted] Confirmation claims to [redacted] Confirmation contract claims. As to the false [redacted] Confirmation contract claims our conclusion that these false claims were made with intent to defraud the revenue remains the same.

E11

In view of the fact that petitioner's waiver of the statute of limitations will expire July 7, 1985, petitioner should be notified by telephone through counsel that it must comply with the terms of the decision within 30 days of the decision, or the matter will be referred to the Department of Justice for enforcement proceedings.

Please provide counsel with a copy of this decision.

Sincerely,

/S/ Donald W. Lewis

11 JAN 1985

ENF 4-02.2 CO:R:E:C
653762 EKC

District Director of Customs
Chicago, Illinois 60607

Dear Sir:

Your memorandum in District Case No. 84-3901-50214 forwarded the petition of [redacted] requesting relief from a penalty in the amount of $31,500 assessed for violation of title 19, United States Code, section 1592. The penalty was assessed under a culpability determination of negligence and is approximately twice the $15,702 loss of revenue.

The penalty was assessed because, although it accurately declared the unit price of jewelry purchased from the Italian concern [redacted] did not disclose interest charged by and paid to [redacted] on the purchases. The discrepancy ran through 47 entries, the first of which was filed July 11, 1980, and the last of which was filed December 17, 1982.

Apparently [redacted] had 45 days in which to pay the original invoice value of the merchandise purchased. Payments beyond 45 days resulted in interest charges. The interest was identified to specific purchases of jewelry. Under these circumstances the interest charged and paid is considered part of the transaction value of the jewelry and the failure to report it constitutes a material omission under the statute.

[redacted] petition asserts that the failure to report the interest was not done with the intention of violating any law. To interviewing agents [redacted] owner made the statement that the interest was not declared because it was not thought to be dutiable. She also characterized the interest charges as monies paid in addition to the cost of the merchandise.

The file does not establish that [redacted] failed to disclose the interest in an effort to conceal it from duty or that [redacted] in fact knew the interest would be dutiable. We nevertheless find [redacted] negligent in that it failed to apprise itself of the Customs laws and regulations regarding the reporting of all charges and payments in respect of the imported merchandise. Accordingly, the penalty is mitigated upon payment of $7,851, provided duties on the interest charges are paid under section 1592(d).

E13

Please notify petitioner of this decision and include a copy of this letter with your notification.

Sincerely,

/s/ Donald W. Lewis

RES-2-11-RIR
708059 O

708059

The Honorable
Frank E. Evans
House of Representatives
Washington, D.C. 20515

Dear Mr. Evans:

This is in further response to your letter of July 6, 1977, enclosing a copy of correspondence you received from [redacted] concerning the procedures for importing silver coins, silver bars or gold coins into the United States. [redacted] is particularly concerned with the permit requirements of Public Law 91-508, "Currency and Foreign Transactions Reporting Act."

Silver bars and gold coins are not subject to the currency reporting requirements of Public Law 91-508. The Secretary of the Treasury has determined that, in addition to U.S. coin and currency all foreign coin and currency which circulate and are customarily used and accepted as money in the issuing country must be reported when the amount being transported exceeds $5,000. Based on information currently available, gold coins do not at this time customarily circulate as money anywhere in the world; and, therefore, they currently are not required to be reported.

Gold or silver bullion and coins may be entered free of duty. While not subject to the currency reporting requirements, gold coins and other coins imported for non-monetary purposes must be declared and are subject to Customs entry requirements as merchandise. Additional information which may be helpful to your constituent is contained in the enclosed pamphlet entitled, "United States Import Requirements."

If we can provide any additional information or be of further assistance, please feel free to call on us. Your enclosures are returned herewith.

Sincerely yours,

[redacted]

[redacted]

Dear [redacted]

You asked for information about the tariff status of samples of "Party Gags" from Korea or Japan. Samples were submitted.

The submitted samples were examined.

Section 305 of the Tariff Act of 1930, as amended (19 U.S.C. 1305), prohibits the importation into the United States of any article which is obscene. The definition of that term was enunciated by the Supreme Court in Miller v. California, 413 U. S. 15 (1973). The basic guidelines are (a) whether the average person, applying contemporary community standards, would find that the work, taken as a whole, appeals to the prurient interest; (b) whether the work depicts or describes sexual conduct in a patently offensive way; and (c) whether the work, taken as a whole, lacks serious literary, artistic, political, or scientific value.

It is our policy to refrain from issuing advisory opinions for purposes of the obscenity provisions of section 305, since it appears contrary to the sound administration of the Customs and related laws to issue a ruling in this situation.

Sincerely,

(Signed) Harvey B. Fox

[redacted]

Dear [redacted]

This correspondence is in reference to your letter of June 15, 1979, concerning the importation of gold coins into the United States.

Genuine gold coins which have been officially issued by a foreign government are admissible into the United States upon proper declaration and are entitled to entry free of duty under the provision for metal coins in item 653.22 of the Tariff Schedules of the United States, TSUS.

Please note, however, that copies of coins are prohibited entry unless marked "COPY" in accordance with the Hobby Protection Act regulations administered by the Federal Trade Commission. Copies of coins must be marked with country of origin and are also dutiable at a rate depending on the metal of which they are made.

There are no restrictions on the importation of gold coins into the United States.

The pamphlets entitled, "GSP and the Traveler" and "United States Import Requirements" are enclosed for your information.

Sincerely,

(Signed) D. D. [illegible]

Darrell D. Kast

[redacted]

Dear [redacted]

This in reply to your letter of October 17, 1980, requesting a ruling concerning the application of the effective date set forth in Presidential Proclamation 4768, Annex II, Section C as to the new valuation system and the new effective rates of duty.

Annex II, Section C of this Presidential Proclamation is "effective as to articles both exported to the United States on and after July 1, 1981, and entered or withdrawn from warehouse for consumption, on and after July 1, 1981."

We have been advised by the special trade representative that this means that the merchandise involved must meet both criteria before the new valuation system and effective rate of duty apply.

Section 315, Tariff Act of 1930 as amended (19 U.S.C. 1315) sets forth the usual effective date of the rates of duty changes. However, section 315(a), Tariff Act of 1930, provides that "except as otherwise specially provided for," the provisions of that section apply. We believe that the effective date, as written by Annex II, Section C of Presidential Proclamation 4768 was not limited to the new valuation system and therefore, specially provides, as well, for the effective rate of duty.

The old valuation system and the old effective rates of duty would apply in all the situations set forth in example A of your letter because the footwear was exported on June 1, 1980, prior to July 1, 1981. The new valuation system and the effective rates of duty would apply in all the situations set forth in example B of your letter because the footwear will be exported on July 2, 1981, and the new valuation system and the new rates of duty would apply to such merchandise exported on July 1, 1981, or afterward.

If you have any further questions on this matter, please feel free to contact us.

Sincerely,

(Signed) Anthony L. Piazza

RES-1 CO:R:E:E
720599 SO

720599

Dear Mr. Brock:

Thank you for your letter of October 5, 1982, bringing to our attention certain laws and practices of foreign governments which limit the ability of U.S. trademark owners to control the use of their trademarks by foreign licensees. You stated that these laws may indicate that the time has come for the U.S. Customs Service to change our present enforcement practices with regard to articles bearing trademarks owned by U.S. citizens or corporations imported in violation of Section 1526 of Title 19, United States Code (19 U.S.C. 1526). You suggested that importation of trademarked merchandise would be lawful only if written consent of the U.S. trademark owner is produced at the time of making entry and that the U.S. Customs Service could enforce the law simply by requiring the importer to produce the written consent of the trademark owner when entering his merchandise.

You will be pleased to hear that we are considering changing our enforcement practices as you have suggested. However, pursuant to Section 177.10(c)(2) of the Customs Regulations (19 CFR 177.10(c)(2)) and Sections 552 (a)(1)(D)&(E) of the Administrative Procedure Act (5 U.S.C. 552(a)(1)(D)&(E)), publication of notice of our proposed change in position in the Federal Register and consideration of the comments of the public is required before the change can be implemented. Early, publication of a Notice of Proposed Rulemaking is contemplated.

We appreciate receiving your views on this important matter.

Yours faithfully,

(Signed) Alfred R. De Angelus

The Honorable
William E. Brock

This ruling concerns the country of origin marking requirements for imported wooden lids.

ISSUE:

Whether imported wooden lids need to be individually marked to comply with 19 U.S.C. 1304.

FACTS:

The importer is a manufacturer of glassware in the United States. They purchase wooden lids for their line of storage jars from a vendor in Pennsylvania who imports them from Taiwan.

It is their request to have the requirement of a label on each individual lid waived. This request is being made to avoid any form of misrepresentation of finished products.

Samples of the lids as they arrive have been submitted to Customs with the "Made in Taiwan" labels on them. Also, included are samples of the lids as assembled with other U.S. made components. Those components being a rubber gasket which is attached to the lid itself, a wire bail assembly, and the jar bottoms.

The importer further processes the lids via attachment of the rubber gasket etc., and feels the identity of the wooden lid changes to that of a storage jar. Additionally, they feel that there is a very good possibility that they would be the "ultimate purchaser" within the contemplation of Section 304 of the Tariff Act of 1930, as amended.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires that every article of foreign origin (or its container) imported into the United States shall be marked in a legible and conspicuous manner to indicate the English name of the country of origin to the ultimate purchaser in the United States. The ultimate purchaser of an imported article is broadly defined in 19 U.S.C. 1304(a) as the last person in the United States who will receive the article in the form in which it was imported.

After viewing the samples, it appears to Customs that the jar is the most important item and the basis of the entirety. The rubber gaskets, the wire bail assembly and the wooden lid are accessory type items and not integral to the jar, but part of the overall item.

In this case, the manufacturer who combines the imported wooden lids with United States manufactured jars, rubber gasket and wire bail assembly knows Taiwan to be the country of origin and is the ultimate purchaser of the lids. Accordingly, the imported lids may be excepted from marking under 19 U.S.C. 1304(a)(3)(D), if the containers in which they are imported are legibly and conspicuously marked to indicate the country of origin, and Customs officers at the port of entry are satisfied by the vendor that the lids will reach the ultimate purchaser in the United States (the manufacturer) in the original marked containers in which imported and will be used only in the further processing into finished decorative jar sets and are not otherwise sold. The importer (the vendor) should be prepared to furnish statements or affidavits to this effect for each entry for which the exception is requested.

THIS DOCUMENT [illegible] TO THE PUBLIC

731706

HOLDING:

The imported wooden lids are excepted from individual marking pursuant to 19 U.S.C. 1304(a)(3)(D) if the above requirements are met.

JUL 2 7 1983

TMK-3 CO:R:E:E
722700 SO

The Honorable
Wyche Fowler, Jr.
Member of Congress
32 Peachtree Street
Atlanta, Georgia 30303

Dear Mr. Fowler:

Thank you for your letter of July 18, 1983, on behalf of [redacted] concerning the policy of the U.S. Customs Service with regard to the importation of "gray market merchandise." [redacted] feels that the Customs Service should change its interpretation of Section 526 of the Tariff Act of 1930, as amended, which permits the unrestricted importation of articles bearing genuine trademarks applied overseas by firms related to the U.S. trademark owner. Customs' present position is based on a judicial decision in the consolidated "perfume" cases which held that the American part of a single international enterprise could not avail itself of the provisions of section 526 to prevent the importation into the United States of authentic products sold abroad by the foreign part of the enterprise.

[redacted] is aware that the Customs Service has prepared a draft Federal Register notice to begin the process of changing the Customs Regulations to restrict the importation into the United States of goods bearing genuine American-owned trademarks, except by or with the consent of the American trademark owner. This change is supported by a recent decision of a Federal District Court (now on appeal) which presents a strong case that Customs' current position may be incorrect. The draft Federal Register notice is currently under review. When published, it will request public comment on this important matter. You may be assured that [redacted] views, and those of others who submit comments supporting [redacted] position, will be given full consideration before a final decision is reached.

If we can provide any additional information or be of further assistance, please feel free to call on us.

Sincerely,

(Signed) Robert B. Schaffer

OCT 17 1983

MAR-2-05 CO:R:E:E
722764 FDC

This ruling concerns the country of origin marking requirements for china plumbing fixtures used in toilets.

ISSUE:

Whether the china plumbing fixtures need to be marked with the country of origin.

FACTS:

The importer will import china plumbing fixtures used in a completed toilet. In the United States, a flushing mechanism is installed in the water closet tank.

LAW AND ANALYSIS:

Section 304 of the Tarrif Act of 1930, as amended (19 U.S.C. 1303), provides that all articles of foreign origin imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

Section 134.35, Customs Regulations, (19 CFR 134.35) states that an article used in the United States in manufacture which results in a article having a name, character, or use differing from that of the imported article, will be within the principle of the decision in the case of United States v. Gibson Thomsen Co. Inc., 27 C.C.P.A. 267 (C.A.D. 98). Under this principle, the manufacturer or processor in the United States who converts or combines the imported article into the different article within the contemplation of section 304(a), Tarrif Act of 1930, as amended (19 U.S.C. 1304 U.S.C. 1304(a)), and the article shall be excepted from marking.

F10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In this case, the addition of the flushing mechanism into the water closet tank does not amount to a substantial transformation. Marking the bowl and tank by good quality adhesive labels indicating the country of origin in a legible and conspicuous manner is adequate.

HOLDING:

The requirements of 19 U.S.C. will be met if both the bowl and tank are marked as indicated above.

722981

This ruling concerns the application of Presidential Proclamation 4991.

ISSUE:

Which rates of duty apply to merchandise exported from Poland under the factual situation presented?

FACTS:

Merchandise was exported from Poland to Canada prior to November 1, 1982, the effective date of Presidential Proclamation 4991. It is now desired to import the merchandise into the United States.

LAW AND ANALYSIS:

Presidential Proclamation 4991, signed October 27, 1982, suspended column 1 rates of duty under the Tariff Schedules of the United States (TSUS) for products of Poland, effective November 1, 1982. The relevant portion of the document states as follows:

> This Proclamation shall take effect with respect to articles exported on and after the third day following the date of publication of this Proclamation in the federal register. (47 F.R. 210, pp 49005, 6).

This Proclamation is unusual in that its effective date is not the date of entry for consumption or withdrawal from warehouse for consumption. Nevertheless, the language used is clear and unequivocal. Accordingly, the fact that the merchandise at issue will be imported into the United States subsequent to November 1, 1982, does not affect its eligibility for entry at the lower column 1 rates. It should be noted that Presidential Proclamation 5048 of April 14, 1983, amended Proclamation 4991, but its effect is not germane to the resolution of this case.

F13

HOLDING:

Products of Poland which are exported from that country prior to November 1, 1982, are eligible for column 1 TSUS rates of duty whenever imported into the United States.

723981

MAY 03 1984

BRO-3 CO:R:E:E
725085 PRO

This ruling concerns the billing procedure when a broker appoints another broker to act for an importer.

ISSUE:

1. Whether an importer may issue a Power of Attorney to one broker that would empower that broker to issue, on the importer's behalf, Powers of Attorney to other brokers in other ports?

2. May the outport broker bill the local broker or the importer?

FACTS:

A broker has considered the possibility of including on blank power of attorney cards a statement allowing them to appoint broker's in other districts to act on behalf of their clients. The broker wonders if a broker receives a copy of a power of attorney from a second broker to act for that broker's client may he file entries and bill the first broker or must the broker bill the importer directly.

LAW AND ANALYSIS:

Under C.S.D. 79-111, if the power of attorney between the principal (importer) and his local broker provides that the local broker may appoint one or more brokers in other districts to act as agents (customhouse brokers) of the importer, the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

G1

local broker in appointing a broker in another district to act on the importer's behalf creates a principal-agent relationship between the outport broker and the importer.

Therefore, the second broker, appointed by the first, may bill the importer directly and not go through the other broker, or the outport broker may go through local broker on the billing procedure.

HOLDING:

1. A broker who receives a power of attorney from an importer with authority to empower other brokers to act for the importer creates a principal-agent relationship between the outport broker and the principal-importer.

2. The outport broker may bill the local broker or the importer, depending on their agreed arrangement.

[redacted]

Dear [redacted]

This refers to our letter of November 15, 1984, concerning entry procedures pertaining to currency and numismatic coins.

In the first paragraph on page three of our letter we stated that a check made out to you, whether or not endorsed for deposit, was a negotiable instrument within the purview of the Currency and Foreign Transactions Reporting Act and must be counted in the computation of the $5,000 threshold reporting requirement. Actually, a check made out to you which is not endorsed is not a negotiable instrument in bearer form within the purview of the Act and need not be counted in the computation of the $5,000. An unendorsed check made out to cash or to bearer or with no payee indicated would be considered a negotiable instrument in bearer form for purposes of the Act.

Sincerely,

Steven I. Pinter

726396

[redacted]

Dear [redacted]

This refers to your letter of September 10, 1984, concerning entry procedures pertaining to "collector type" coins.

You furnished copies of 2 earlier letters that you sent to Customs asking certain questions about clearing coins into and out of the United States. However, we have no record of receiving your letters. In your April 4, 1982, letter you ask the following questions:

1. What U.S. Customs form should be used to declare merchandise (collector coins of silver and copper) leaving the United States and reentering the U.S.?

2. Should checks that have been made out to myself but not yet endorsed be declared as part of the $5,000 in currency or negotiable instruments that is to be reported?

3. Are there any special procedures to be followed in order to clear Customs coming or going that would make it as easy as possible for both Customs agents and myself?

You mentioned that you have cleared Customs with numismatic coins through both Houston and Los Angeles, but under different procedures. You state that you do not want to use a customhouse broker and you would like to know what the regulations are so that you can clear the coins yourself.

Currency (metal or paper) in current circulation in any country and imported into the United States for monetary purposes is considered an intangible pursuant to General Headnote 5(b), Tariff Schedules of the United States (TSUS). Currency meeting the definition of an intangible is not subject to declaration as imported merhandise nor is it subject to the provisions of the Tariff Schedules of the United States. Nevertheless, the Currency and Foreign Transactions Reporting Act of 1970, (31 U.S.C. 1101, et. sec.) requires, in general, that any

64

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

person transporting more than $5,000 in monetary instruments into or out of the United States must file a report (Customs Form 4790) with the Customs Service. For the purposes of this law, "currency" means "the coin and currency of the United States or any other country, which circulate in and are customarily used and accepted as money in the country in which issued". (31 C.F.R. section 103.11).

Notwithstanding the above, all coins imported into the United States for nonmonetary purposes (for example, for resale or numismatic purposes) are considered merchandise subject to Customs entry requirements. Therefore, any coins you acquire while you are out of the country should be reported on your Customs declaration (Customs Form 6059B) when you reenter the United States. The value which should be declared for the coins should be the actual price paid for them. You should be prepared to produce proof to Customs at the port of entry that numismatic coins being imported do not meet the definition of "currency" under the Currency and Foreign Transactions Reporting Act. Unless such proof is offered and accepted by Customs, the coins will be considered "currency" for purposes of the Act. For the purposes of the Act and the $5,000 threshold reporting requirement, the face value of the coins should be used.

We note that you mentioned that you used a Customs Form 4455, Certificate of Registration, on one of your trips. Any person, except a non-resident seaman, airman, or person engaged in similar employment, who intends to take effects of foreign origin abroad may register such articles before departure from the United States in order to facilitate their identification upon return. Only articles of foreign origin having serial numbers or other distinctive, permanently affixed, unique markings can be registered. It would not appear that most numismatic coins would have permanently affixed unique markings which would enable them to be registered on the Customs Form 4455. In any case, the major reason for using the form is so that a returning resident may avoid having to pay duties on personal effects which he had on his person when he departed the United States. Metal coins are free of duty pursuant to item 653.22 TSUS. Therefore the use of the registration procedure would not be appropriate in the case of numismatic metal coins which are being taken out of the country temporarily for display or for sale.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

726396

65

For purposes of the Currency and Foreign Transactions Reporting Act mentioned earlier, you must report on Customs Form 4790 at the time of entry into the United States in addition to coin or currency, all travelers checks, money orders, and negotiable instruments or investment securities in bearer form if they total more than $5,000. A check made out to you, whether or not endorsed for deposit, is a negotiable instrument within the purview of the Act and must be counted in the computation of the $5,000.

Concerning special procedures, there are no specific Customs Regulations which pertain exclusively to numismatic coins. However, we think it would be prudent to have a detailed inventory of all coins that you take out of the United States and appropriately notate the ones that are sold or traded during the course of your trip before returning to this country. This inventory will serve to corroborate your declaration if the Customs inspector at the point of entry questions you about the coins. As we mentioned earlier, you should be prepared to prove that the coins do not meet the definition of "currency" under the Currency and Foreign Transactions Reporting Act.

The usual procedure in the case of American residents returning from abroad is to handle the importation of articles carried in the traveler's baggage with the Customs declaration and such oral information as may be requested by the Customs inspector at the time of entry, regardless of the value of the articles being imported. However, you should be aware that the district director of Customs office at ports of entry has the descretion to require a formal Customs entry to be made if he is of the opinion that the particular importation could be handled more properly by that procedure. A commercial invoice is usually furnished with a formal Customs entry. We are of the opinion that it would be beneficial in any case for you to obtain an invoice executed by the seller for any coins that you purchase while abroad. Even if a formal entry is not required by the district director's office, the invoices will serve as corrobration for your declaration. You should be aware that Customs never requires an importer to utilize the services of a licensed customhouse broker.

You may be interested to know that while gold coins may actually remain legal tender in the United States and in other countries, they are not regarded as "currency" in general circulation within the meaning of the Currency and Foreign

THIS DOCUMENT MAY BE MADE PUBLIC

726396

G6

Transactions Reporting Act. Consequently, gold coins are exempt from the reporting requirements of the Act and should not be included in the $5,000 computation for purposes of deciding whether to file a Customs Form 4790.

[redacted]

Dear [redacted]

Your January 8, 1985, letter concerned the change in the country of origin marking of articles due to the enactment of the Trade and Tariff Act of 1984. In your letter you state two possible classifications for the articles imported by your client, items 657.25 and 696.15, Tariff Schedules of the United States (TSUS).

As you note in your letter, section 207 of the Trade and Tariff Act of 1984 changes the marking required on pipe and pipe fittings. A January 9, 1985, Federal Register notice (copy enclosed) sets forth the scope of the change created by this enactment. Articles affected by the change are identified by TSUS number.

Neither 657.25 nor 696.15, TSUS, are among those tariff provisions. For that reason, section 207 does not change the country of origin marking requirements applicable to the articles imported by your client, which are classified under these two tariff provisions.

Sincerely,

Steven I. Pinter

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

OCT 22 1985

REFER TO
TMK-3 CO:R:E:E
727744 SO

Mr. Efrain Picon
Assistant District Director, C&V
U.S. Customs Service
P.O. Box 2112
San Juan, Puerto Rico 00903

Dear Mr. Picon:

In your memo of November 28, 1984, you asked for advice as to when a trademark recorded for one class of merchandise is protected in another class. Specific problems have been encountered in cases where articles have been imported bearing famous trademarks registered for other lines of merchandise. Examples include (1) men's trousers from the Dominican Republic, hosiery from Panama and men's billfolds from Taiwan, all bearing the "Yves Saint Laurent" trademark (recorded with Customs for perfume and other articles in Class 51); (2) shirts from Panama bearing the "Oscar de la Renta" trademark (recorded for perfumery), and; (3) footwear manufactured in South Korea and imported from Panama bearing the "Kangaroo" trademark (recorded for handbags in Class 18). You asked us to furnish guidelines for use in determining whether the marks in question are "strong" marks.

You also mentioned our trademark recordation for "SEIKO," which states that "SEIKO" is a "strong" mark, and that "strong" marks are protected not only for articles to which the trademark is applied by the trademark owner (in this case watches, clocks and parts thereof in Class 27), but also for other goods which might naturally come from the same trademark owner. Please note that the numbered Classes of merchandise referred to above have been established for purposes of organizing the work of the U.S. Patent and Trade mark Office and are not legally significant for purposes of establishing Customs' trademark violations.

It is firmly established that the owner of a trademark which is "original, arbitrary, fanciful, or a strong mark," may exclude or prevent anyone from the use of that trademark, not only for the commodity he manufactures and sells, but for a wide variety of products. Where the mark itself is inherently unique or has been the subject of wide advertising, it is a "strong" trademark. The courts have pointed out such outstanding examples of this type of trademark as "Kodak," or "Aunt Jemima." In these cases, the trademark laws protect the senior user's interest in being able to enter a related field at some future time, with his good reputation intact.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

69

This issue is discussed in the Konica case (C.S.D. 79-410), copy enclosed. In that case, the Konica trademark was found to be a strong mark entitled to protection against infringing importations of watches, even though the "Konica" trademark had been applied exclusively to cameras and camera accessories. While it is not apparent from reading the Konica decision, we note that the trademark protected by Customs (Konica) appears in stylized script form. Even though the mark on the inexpensive imported watches was in block letters (KONICA) there was, nevertheless, a "counterfeit" trademark violation.

Applying the above guidelines to the specific questions you raised, we note that the protected trademarks "Yves Saint Laurent," "Oscar de la Renta" and "Kangaroo" are unique or "strong marks." The first two are the names of famous designers of a variety of high quality articles. The unauthorized use of the designers' names on poor quality items would strongly tend to confuse the public as to the source of those items. While the kangaroo is a creature of nature, its use as a trademark for handbags is unique and not descriptive of the handbags in any way. Through advertising, the "Kangaroo" trademark for handbags has become a "strong mark." Therefore, in our opinion, Customs cannot sanction the unauthorized use of the mark "Kangaroo" on footwear as simply being descriptive of the article. Certainly, the ordinary purchaser at retail would not expect to be buying footwear made of kangaroo hide because the shoes being purchased are marked "Kangaroo." Accordingly, we are of the opinion that the trousers, hosiery, billfolds, shirts and shoes in question, if imported bearing marks identical with or substantially indistinguishable from the "strong" trademarks "Yves Saint Laurent," "Oscar de la Renta" and "Kangaroo," applied without the authorization of the trademark owners, would be "counterfeit" trademark violations.

Section 526(e) of the Tariff Act of 1930, as amended (19 U.S.C 1526(e)) provides for the seizure and forfeiture of merchandise bearing a counterfeit mark (within the meaning of section 1127 of Title 15) imported in violation of the provisions of section 1124 of Title 15. A "counterfeit" is a spurious mark which is identical with or substantially indistinguishable from, a registered mark (15 U.S.C. 1127; 19 CFR 133.23a(a)).

Section 42 of the Act of July 5, 1946 (commonly referred to as the Lanham Act, 60 Stat. 440, 15 U.S.C. 1124) prohibits the entry at any customhouse of the United States of articles of imported merchandise which shall copy or simulate a U.S. registered trademark, provided a copy of such trademark registration is filed with the Secretary of the Treasury and recorded in the manner provided by regulations (19 CFR 133.1 - 133.7). Infringement of federally registered trademarks is governed by the test of whether defendant's use is likely to cause confusion, or to cause mistake, or to deceive.

610

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

When comparing conflicting marks to determine whether or not they are "counterfeit," we must first determine that the marks are "spurious." The term "spurious" refers to marks that are applied to goods without authorization of the trademark owner. Therefore, genuine trademarked articles could not fall within the definition of the term "counterfeit." It is also important to compare the accused mark with the protected mark as it appears on the trademark owner's merchandise, and that the comparison be made from the perspective of an average purchaser rather than an expert. If, upon examination of the marks as they appear on the imported merchandise, an average purchaser would find them to be "the spitting image of," or "substantially indistinguishable" from the trademark owners' merchandise, then a "counterfeit" trademark violation is established. See Montres Rolex, S.A., Plaintiff-Appellee, against Dennis Snyder, Regional Commissioner, U.S. Customs Service et al., U.S. Court of Appeals for the Second Circuit, 718 F.2d 524; 220 U.S.P.Q. 10. This was an appeal from a judgment of the U.S. District Court for the Southern District of New York, Vincent L. Broderick, Judge, declaring imported gold watch bracelets to be counterfeits and therefore subject to forfeiture under 19 U.S.C. 1526(e), and directing defendant U.S. Customs Service to dispose of the merchandise.

The imported articles in question, bearing marks which are "counterfeits" of the Customs protected trademarks "Yves Saint Laurent," "Oscar de la Renta" and "Kangaroo," are subject to seizure and forfeiture. The owner of the trademark shall be notified of the seizure and the quantity of the articles seized. Unless the trademark owner, within 30 days of notification, provides written consent to the importation of the articles, exportation, entry after obliteration of the trademark, or other appropriate disposition, the articles shall be disposed of (after removal or obliteration of the "counterfeit" marks) as follows: (19 CFR 133.23a)

(1) By delivery to federal, state or local government agencies which have a need for them, or

(2) By gift to charitable institutions which have a need for them, or

(3) By sale at public auction, after 1 year from forfeiture, after first determining that no federal, state or local government agency or charity has a need for them, or

(4) By destruction, if they are unsafe or a health hazard.

Please note that there is no preference stated in the law or regulations (19 U.S.C. 1526(e) and 19 CFR 133.52(c)) between options (1) and (2) above, and that option (3) cannot be used unless the district director is satisfied that no government

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

agency or charitable institution needs the goods. While it would appear that 19 U.S.C. 1526(e) authorizes Customs to dispose of forfeited articles with the "counterfeit" marks still in place in cases where it is not "feasible" to remove or obliterate the marks, we are no longer interpreting the law in that manner. We note that the Trademark Counterfeiting Act of 1984 (Public Law 98-473, 18 U.S.C. 2320) imposes criminal sanctions for trafficking in counterfeit goods. If Customs were to sell or give away forfeited articles bearing counterfeit marks, Customs would be acting contrary to the intent of Congress in enacting the Trademark Counterfeiting Act of 1984.

Therefore, articles forfeited to the Government bearing "counterfeit" marks shall no longer be given away or sold pursuant to options (1), (2) or (3) above unless the counterfeit marks are removed or obliterated. In cases where removal or obliteration of the marks is not feasible (the articles would be defaced, or obliteration would be disproportionately expensive considering the value of the articles), the articles shall be destroyed (19 U.S.C. 1611). However, before destroying a shipment of articles which would be useful to a government agency or charity, you may invite the trademark owner or a potential donee agency or charitable institution to assist in removing or obliterating the "counterfeit" marks.

Copies of this decision will be circulated to all Customs officers for their guidance.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and
Restricted Merchandise Branch

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

OCT 21 1985

REFER TO
RES-3 CO:R:E:E
728062 SO

Mr. Philip Metzger
Assistant Area Director, Commercial Operations
New York Seaport
U.S. Customs Service
6 World Trade Center, Room 423
New York, New York 10048

Dear Mr. Metzger:

In your memo of November 28, 1984, you asked for advice regarding the responsibility, if any, imposed on Customs officers by a recent amendment to Section 4 of the Textile Fiber Products Identification Act (15 U.S.C. 70b). Pursuant to this amendment, textile fiber product advertising in any mail order catalog or in mail order promotional material shall be considered to be false or deceptive, unless the product description clearly states that the textile fiber product is processed or manufactured in the United States, or imported, or both. Particularly, you asked if Customs officers would be responsible for examining imported mail order catlogs and promotional material to determine if there are any textile fiber products advertised therein which are falsely described. You also asked if any action should be taken against shipments of such printed matter found to contain false or deceptive advertising, as now defined.

We are of the opinion that the amendment to Section 4 of the Textile Fiber Products Identification Act referred to above does not impose a legal obligation on Customs officers to review shipments of mail order catalogs or promotional material specifically to discover violations of this type. The law (15 U.S.C. 70b(i)), in our opinion, does not grant authority to Customs officers to seize or otherwise detain shipments of mail order catalogs or promotional material which fail to meet the standards of fair advertising set forth in the law. If, however, a violation is discovered by a Customs officer in the normal course of his/her duties, it would be prudent to warn the importer that penalties may be assessed by the Federal Trade Commission if the catalogs are distributed with the "false advertising" in place.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and
Restricted Merchandise Branch

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

File card made 2/6/70 Bro

FEB 2 1970
799615
IN 363.2 K

Dear

This is in reference to your letter of December 4, 1969, enclosing two sample screwdriver blades which include a plastic and spring device attached to the blades to enable the user to clamp the screw to the end of the blade while the screwdriver is in use. The blades would be imported without handles and completed by the attachment of handles made in your Houston, Texas, facility.

The Bureau has previously advised you that in the case of ordinary screwdriver blades imported without handles, your company may be considered the ultimate purchaser of the blades within the meaning of 19 U.S.C. 1304(a), and such blades may accordingly be excepted from country of origin marking in the appropriate circumstances.

In the case of the screwdriver blades with the screw holding attachment, however, the Bureau is of the opinion that the portion of the finished screwdriver that will be represented by the imported component will be so substantial that the addition of the domestic handle cannot be considered to result in the manufacture of a new and different article in the United States, or a substantial transformation of the imported component. Accordingly, the Bureau is of the opinion that a marking such as "Blade made in (name of country)" must appear legibly and conspicuously either on the blade or the plastic screwholding attachment affixed to the blade.

Sincerely yours,

(Signed) R. E. TURNER

RAYMOND E. TURNER

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

2 JAN 1986

REFER TO

MAR-3 CO:R:E:E
729096 LR

729096

ISSUE:

Whether the country of origin marking at the base of the tongue or inside the heel on athletic footwear satisfies the requirements of 19 U.S.C. 1304 where the footwear and/or the box also displays symbols associated with a country other than the country of origin.

FACTS:

It has been brought to Customs attention that certain athletic shoes are being imported which may not satisfy the country of origin marking requirements of 19 U.S.C. 1304. The specific circumstances are described below.

Case I

The shoes in question are manufactured in the Republic of Korea. Although they are marked "Made in Korea" at the base of the tongue label, a variety of British symbols appear on the shoes. First, a British flag is prominently displayed on the top of the footwear. Second, the size labels on the inside of the shoe and on both ends of the box make reference to UK and USA sizing. Finally, the shoe box lid is a reproduction of the British flag. There is no country of origin marking on the shoe box.

Case II

The shoes are manufactured in the R.O.C. (Taiwan). The country of origin is printed on the inside of the heel of the shoe and on the bottom of the shoe box. The American flag appears on the side of the shoe. The box has a reproduction of the American flag as its lid and the sides of the box are labeled "Action Shoes Dallas, Texas."

APPLICABLE LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) requires that every article of foreign origin imported into the United States be marked in a conspicuous place as legibly, indelibly, and permanently as the nature of the article will permit in such manner as to indicate to an ultimate purchaser in

THIS DOCUMENT MAY BE DISCLOSED TO THE PUBLIC

A3

the United States the English name of the country of origin (emphasis added). The Customs Service has interpreted the requirement that articles be marked in a conspicuous place to mean that they must be marked in a place where the ultimate purchaser is able to find the marking easily. (See 19 CFR 134.41(b)).

Although Customs would normally consider a country of origin marking at the base of the tongue label or on the inside of the heel to be conspicuous, this is not necessarily the case where foreign symbols (other than that of the country of origin) appear on the article and/or its container.

The Customs Service has recognized that the presence of a geographic location other than the country in which the article was produced on an imported article or its container may mislead the ultimate purchaser as to the true country of origin. Thus, in cases where words indicating possible origin other than the actual country of origin appear on the article, Customs requires that the country of origin marking shall appear in close proximity to and in at least comparable size letters to such words, and preceded by "Made in," "Product of," or other words of similar meaning. (19 CFR 134.46). The purpose of this regulation is to alleviate the possible confusion that is created by these words.

We believe that the presence of symbols associated with a country other than the country of origin may also mislead the ultimate purchaser as to the country of origin. This is especially true where the foreign symbols are more readily visible than the country of origin marking.

In this case, the British and American symbols on the shoes and the boxes are far more prominent than the country of origin marking in the shoes or at the bottom of the box. After viewing the British or American flag on both the lid of the box and the shoes, the UK/USA size label on the shoes and the box (or the words "Action Shoes Dallas, Texas" on the box), we believe that most consumers would conclude that Great Britain or the United States is the country of origin. In light of these prominently displayed British or American symbols, it would take a very determined consumer to ascertain that the country of origin is the Republic of Korea or Taiwan. Based on the facts presented, we find that the country of origin marking at the base of the tongue or inside the heel is not conspicuous.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A4

729096

In order to satisfy the statutory requirements that the imported articles be marked in a conspicuous place, Customs will require that both the shoes and the shoe box be marked with the country of origin (in the manner described below). The marking of the shoe box will immediately alert the ultimate purchaser of the true country of origin and eliminate any confusion caused by the symbols. Although 19 CFR 134.24(d)(3) states that if the container is normally opened by the ultimate purchaser prior to purchase, only the article need be marked, this regulation would not apply where Customs finds that the article itself is not conspicuously marked and that the marking of the container was necessary to satisfy the basic requirements of section 1304.

We also find that the presence of the UK/USA size labels on both the shoes and the box or the words "Action Shoes Dallas, Texas" on the box creates confusion as to the country of origin which can be alleviated by application of 19 CFR 134.46.

729096

HOLDING:

Due to the presence of symbols associated with a country other than the country of origin on the shoe and/or the shoe box, the country of origin marking at the base of the tongue or inside the heel is not conspicuous. This defect would be cured by an additional permanent country of origin marking on the outside of the box which is: 1) preceded by the words "Made in" or "Product of"; 2) placed either on the top of the lid or the side of the box - preferably on the side of the box containing information about the size and style of the shoe; and, 3) in lettering at least 1/8 inch high.

Also, due to the presence of words of geographic location (e.g. UK/USA on the size labels on the shoes and the shoe boxes or the words "Action shoes Dallas, Texas" on the boxes) the country of origin marking on the inside at the base of the the tongue or on the inside of the heel does not satisfy the requirements of 19 CFR 134.46. This defect would be cured by placing a country of origin marking preceded by the words "Made in" or "Product of" in close proximity to and in letters of at least comparable size to such words.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

AS

Case I

In order to satisfy the statutory requirements, both ends of the shoe box must be permanently marked "Made in Korea" or "Product of Korea" in close proximity to and in at least comparable size letters to the UK and USA references. The shoes must also be permanently marked "Made in Korea" or "Product of Korea" in close proximity to and in at least comparable size letters to the UK/USA sizing labels.

Case II

In order to satisfy the statutory requirements, in addition to the country of origin markings on the shoes, both sides of the shoe box must be permanently marked "Made in Taiwan" or "Product of Taiwan" or other similar words in close proximity to and in at least comparable size letters (but not less than 1/8 inch high) to the words "Action Shoes Dallas, Texas".

EFFECTIVE DATE:

Merchandise entered for consumption or withdrawn from warehouse for consumption on or after March 1, 1986, is subject to the ruling.

Donald W. Lewis

JUL 27 1981

[redacted]

Dear [redacted]

In a letter dated June 4, 1981, you inquired as to the dutiable status of a smokehouse produced in Northern Ireland.

The smokehouse, which will be shipped in pieces for final assembly at your U.S. plant, is used in small meat plants to smoke and cook meat. General Headnote 10(h) of the Tariff Schedules provides that unless the context requires otherwise, a tariff description for an article covers such article, whether assembled or not assembled, and whether finished or not finished.

The smokehouse is classifiable under the provision for industrial machinery, whether or not electrically heated, for the treatment of materials by a process involving a change in temperature, such as heating, cooking, roasting... and parts thereof, other, other in item 661.68, Tariff Schedules of the United States, and dutiable at the rate of 5.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Sincerely,

John J. Martuge

Dear

In your letters of October 7, 1982, November 29, 1982 and January 7, 1983, you inquired on behalf of of Canada as to the dutiable status of fifteen concrete curing compounds manufactured in Canada.

Samples of Kurowax-Clear, Masterseal, MB-429, CLF-100-3 and CLF-100-2 were submitted.

Based upon our analysis and the additional information that you have furnished, Kurowax-Clear, Light Reflective Kurowax, Terra Cotta Kurowax, French Gray Kurowax, Nile Green Kurowax, Tile Red Kurowax, Cocoa Brown Kurowax, Hi-Reflective Kurowax, Battleship Gray Kurowax, Coral Gables Beige Kurowax and Black Kurowax are mixtures, in part, of products having a benzenoid structure, which are provided for in Schedule 4, part 1, subpart C, Tariff Schedules of the United States (TSUS).

Masterseal and MB-429 are mixtures, in part, of products having a benzenoid structure, which are provided for in Schedule 4, part 1, subpart B, TSUS.

CLF-100-3 and CLF-100-2 are mixtures of non-benzenoid compounds or materials.

Your letter states that each of these products, with the exception of Masterseal and MB-429, include wax as the major functional component and therefore you suggest TSUS item 494.22 as the correct classification. The waxes covered by TSUS item 494.22 embrace only crude or refined wax, not waxes which have been combined with other ingredients to make up formulated products.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A8

Kurowax-Clear, Light Reflective Kurowax, Terra Cotta Kurowax, French Gray Kurowax, Nile Green Kurowax, Tile Red Kurowax, Cocoa Brown Kurowax, Hi-Reflective Kurowax, Battleship Gray Kurowax, Coral Gables Beige Kurowax and Black Kurowax are classifiable under the provision for benzenoid mixtures, in item 413.51, TSUS, and dutiable at the rate of 17.5 percent ad valorem, but not less than the highest rate applicable to any component material. Currently, the highest rate applicable to any component material is less than 17.5 percent ad valorem.

Masterseal and MB-429 are classifiable under the provision for benzenoid mixtures in item 407.16, TSUS, and dutiable at the rate of 1.7 cent per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The component material with the highest rate is that of TSUS item 402.36 with a rate of duty of 1.1 cent per pound plus 17.5 percent ad valorem.

CLF-100-3 and CLF-100-2 are classifiable under the provision for mixtures not specially provided for, that are in whole or in part of hydrocarbons derived in whole or in part from petroleum, shale oil, or natural gas in item 432.10, TSUS, and dutiable at the rate of 5 percent ad valorem, but not less than the highest rate applicable to any component material. The component material with the highest rate is that of TSUS item 425.52 with a rate of duty of 7.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

for J. Mattuge

Dear

In a letter dated June 6, 1983, you inquired as to the dutiable status of two caramel pastes produced in Switzerland.

The two pastes, designated TM 52 and TM 30, are ingredients used in fillings in baked goods and confections. Your inquiry includes percentage breakdowns both by weight and by value for the component materials in each paste. The component value breakdowns, unfortunately, are defective in that they include a separate percentage allocated to "processing costs" involving heat transforming operations performed in the manufacture of these products. Please note that a component material breakdown by value is aimed at determining the cost or value of each ingredient at that point just prior to final assembly or mixing, when nothing further remains to be done to it. Consequently, such expenses as packing, overhead and, generally, labor (unless required to process or prepare a particular ingredient for assembly or mixing) would not be included in a component value breakdown. Processing costs, when they are applicable in such a breakdown, are included not as a separately itemized cost, but are added to the cost of an ingredient, if such processing is performed on that ingredient in order to prepare it for final assembly or mixing with other component materials in the product. Costs incurred for processing performed on all ingredients--such as, for example, costs incurred in mixing all the ingredients together, or in drying the mixture to obtain a specific moisture content--pertain to the product itself, rather than to any one ingredient. Such processing costs would not be included in a value breakdown.

The component weight breakdown included in your inquiry indicates that product TM 52 is composed of sugar (51 percent), vegetable fat (12 percent), sorbitol (17 percent), skimmed milk powder (5 percent), and water (15 percent). A product of this composition would be classified under the provision for other edible preparations not specially provided for in item 183.05, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 10 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A10

A sample of TM 52, previously forwarded by you under separate cover and analyzed by the Customs laboratory at New York, appears to have been of a different composition. The laboratory report on this sample states that TM 52 is composed of sucrose (27.0 percent), fat (12.2 percent), sorbitol (1.0 percent), nonfat milk solids (40.7 percent), and water (19.1 percent). A caramel paste formulated with ingredients in these amounts would be classified, if in chief value of milk, under the provision for malted milk; and articles not specially provided for, of milk or cream, in item 118.30, TSUS, and dutiable at the rate of 17.5 percent ad valorem. Articles classified in item 118.30 are subject to the quota limitations set forth in item 950.11, Appendix to the Tariff Schedules, which allows for a world-wide quota allocation of 6,000 pounds per quota year. Additionally, an import license, issued to the importer of this merchandise by the U.S. Department of Agriculture, would be required at the time of entry into the United States.

If TM 52 is not in chief value of milk or cream, and contains 5.5 percent by weight, or less, of butterfat, the product would probably be classified under the provision for other edible preparations not specially provided for, in item 183.0040 TSUS, and subject to quota proclaimed pursuant to section 22 of the Agricultural Adjustment Act, as amended, as provided for in item 950.19, Appendix to the Tariff Schedules. As no quota Quantity has been allocated under item 950.19, merchandise covered by this quota provision may not be imported into the United States.

The component breakdowns for TM 30 indicate that this product contains cream powder (70 percent fat) in amounts of 17 percent by weight and 65 percent by value. Other listed ingredients include, by weight, sugar (51 percent), sorbitol (17 percent), and water (15 percent). The laboratory report on the sample submitted indicates that TM 30 consists of cream powder of about 71 percent fat (55.0 percent by weight), sucrose (24.1 percent), sorbitol (3.5 percent), and water (17.5 percent).

Caramel paste TM 30 in either formulation is classifiable under the provision for malted milk, and articles not specially provided for, of milk or cream, in item 118.30, TSUS, and dutiable at the rate of 17.5 percent ad valorem. As stated previously, articles classified in item 118.30 are subject to quota in item 950.11, Appendix to the Tariff Schedules, which limits importations under this item number to 6,000 pounds world-wide each year. Additionally, an import license issued to the importer by the United States Department of Agriculture would be required at the time of entry of the merchandise.

Dear

In a letter dated June 15, 1983, on behalf of your client, you inquired as to the dutiable status of a sirup topping produced in Mexico.

You state in your letter that this sirup topping, known in Mexico as "cajeta", is usually eaten alone with a spoon or used as a spread on bread. Further, the product will be imported in individual containers of 640 grams (about 22.5 ounces) and 310 grams (about 10.85 ounces), each containing sirup ready for immediate consumption. The percentage of ingredients by weight and their value in United States currency for the two sizes is listed as follows:

Ingredients	Percentage by Weight	Value-640 gr.	Value-310 gr.
cow's milk	27.56 percent	US$ 0.145	US$ 0.070
glucose	43.18 "	0.066	0.032
sugar	22.77 "	0.026	0.013
goat's milk	2.39 "	0.012	0.006
sorbitol	1.82 "	0.003	0.002
artificial vanilla flavor	0.23 "	0.002	0.001
lecithin	0.05 "	____*	____*

*The manufacturer has stated that the value for lecithin is so minute that he could not provide a value.

A13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

You propose that this sirup topping be classified as candy, and other confectionery, not specially provided for, in item 157.10, Tariff Schedules of the United States (TSUS), or, alternatively, under the provision for sugars, sirups, and molasses, described in Part 10A of Schedule 1, flavored; and sirups, flavored or unflavored, consisting of blends of any of the products described in Part 10A, Schedule 1, in item 155.75, TSUS.

A sweet sirup topping, eaten by itself with a spoon or used as a spread on bread, would not be classified as candy or other confectionery in item 157.10. Further, the presence of a substantial amount (about 30 percent) of milk, a non-sugar ingredient not usually found in sugar sirups, renders this product more than a flavored sirup classifiable in item 155.75. In several administrative rulings, moreover, such as in Treasury Decision 56502(55), the Customs Service has consistently classified cajeta on the basis of the component material of chief value in the product, which is the milk.

Accordingly, cajeta is classifiable under the provision for malted milk; and articles not specially provided for, of milk or cream in item 118.30, Tariff Schedules of the United States, and dutiable at the rate of 17.5 percent ad valorem. Articles classifiable in item 118.30 are subject to quota in item 950.11, Appendix to the Tariff Schedules. Additionally, an import license issued to the importer by the Department of Agriculture would be required at the time of entry of such merchandise.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Sincerely,

John J. Martuge
Area Director
New York Seaport

Dear

In your letter dated October 29. 1984. you inquired on behalf of your client, about the dutiable status of head cleaning kit from Canada.

The head cleaning kit is composed of a bottle of cleaning solution and two cleaning diskettes. The floppy disk drive head cleaning diskette is a 5-1/4 inch square, envelope-like packets, consisting of a vinyl plastic outer shell and an inner cleaning sheet made from a non-woven polyester textile. You indicate that the textile component is in chief value.

The cleaning solution is classifiable under the provision for blackings, powders, liquids, and creams for polishing and cleaning, all the foregoing in immediate containers holding not over ten pounds each in item 493.1000, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 2.7 percent ad valorem. Effective January 1, 1985, the rate of duty will be 2.6 percent ad valorem.

The cleaning diskette (in chief value polyester textile) is classifiable under the provision for articles of non-woven fabric of man-made fibers in item 355.2500, TSUSA, and dutiable at the rate of 6 cents per pound plus 13.8 percent ad valorem. Effective January 1, 1985, the rate will be 4 cents per pound, plus 13.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Dear Sirs:

In your letter dated November 1, 1984, you inquired about the dutiable status of Nur So manufactured in West Germany. You submitted a sample and technical literature for our review.

Nur So is used to put in hems, attach linings, making trouser cuffs and reinforcing frayed collars, among other uses. The product is sprinkled in the area where needle and thread would otherwise be used. Heat is applied with an iron, and the two surfaces are bonded to each other.

Cement (adhesive) is a substance that is capable of holding materials together by surface attachment. Accordingly, since Nur So meets the definition of cement, it is classifiable under the provision for cement, not specially provided for, in item 494.6020, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 2.3 percent ad valorem. Effective January 1, 1985, the rate will be 2.2 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Mr. Anders Krageland
NCC, Ltd.
5805 N.W. Blue Lagoon Drive
Suite 311
Miami, FL 33126

Dear Mr. Krageland:

In your letter dated February 21, 1985, you inquired about the dutiable status of canned fish from Equador.

This product, described as Equadorian skipjack (Katsuwonus pelamis), is to be imported in cases containing forty-eight 6.5 ounce cans and packed either in brine or in vegetable oil. You state that skipjack, or oceanic bonito, according to your information, is a member of the bonito family.

Scientific reference works consulted indicate that the skipjack (Katsuwonus pelamis) is a member of the family Scombridae, a grouping which includes the mackerals, bonito, skipjack, albacore, and other mackeral-like fish. This fish is marketed commercially as a tuna, as noted in your letter, and, in fact, is one of several species of fish defined as "tuna" in the standard of identity established for that product by the United States Food and Drug Administration. Finally, the United States Customs Service has long considered skipjack to be a "tuna" for purposes of tariff classification.

Accordingly, skipjack tuna from Equador, in airtight tins of 6.5 ounces each, packed in brine, is classifiable under the provision for tuna fish, prepared or peserved in any manner, not in oil, in airtight containers, if within the quota for an aggregate quantity entered in any calendar year not to exceed 20 percent of the United States pack of canned tuna during the immediately preceding calendar year, as reported by the National Marine Fisheries Service, in item 112.3040, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 6 percent ad valorem. If entered after the tariff rate quota period has closed, classification would be under the provision for other tuna fish, prepared or perserved in any manner, not in oil, in airtight containers, in item 112.3400, TSUSA, with duty at the rate of 12.5 percent ad valorem.

Skipjack tuna from Equador, in tins of 6.5 ounces each and packed in vegetable oil, are classifiable under the provision for tuna fish, prepared or preserved in any manner, in oil, in airtight containers, in item 112.9000, TSUSA, and dutiable at the rate of 35 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)). B4

Ms. B.A. Burton
Administrative Assistant
Pacific Giant
13327 Paxton Street
Pacoima, CA 91331

Dear Ms. Burton:

In your letter of March 12, 1985, you requested the tariff classification of "Cheese Sandwich" strips from South Korea.

"Cheese Sandwich" is a combination cheese and fish paste snack food, consisting of a thin layer of cheese sandwiched between two 4 inch strips of dried fish paste. Approximately three dozen of these combination strips are included in individual retail type packages of a clear plastic material. This product contains the following ingredients, listed in order of predominance by weight:

cheese	48.70 percent (origin: U.S.A.)
pollack	40.35
corn starch	4.70
D-sorbitol	2.83
sugar	1.10
gluten	1.08
salt	0.97
L. Glutamate	0.26
Sodium Sorbistat K	0.01

"Cheese Sandwich" strips are classifiable under the provision for other edible preparations not specially provided for (including prepared meals individually packaged) in item 183.0520, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 10 percent ad valorem.

Additionally, articles classifiable in item 183.0520, TSUSA, if containing sugars derived from sugar cane or sugar beets, whether or not mixed with other ingredients--except articles within the scope of TSUS items 958.10, 958.15, or other import restrictions provided for in part 3 of the Appendix to the Tariff Schedules--are subject to quota restrictions listed in item 958.18 in part 3, Appendix to the Tariff Schedules.

Finally, articles classifiable in item 183.0520, TSUSA, which are the products of South Korea, are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Mr. D. James Brennan
H.Z. Bernstein Company, Inc.
One World Trade Center
Suite 1973
New York, New York 10048

Dear Mr. Brennan:

In your letter dated May 6, 1985 you inquired on behalf of your client, Toyomenka (America), Inc., about the dutiable status of "Sanwet" from Japan.

"Sanwet" is a super absorbent polymer internally cross-linked starch-grafted-polyacrylate made from starch and acrylic acid. A sample tested by the United States Customs Laboratory was reported out as a "chemically modified starch."

"Sanwet" is classifiable under the provision for dextrine and soluble or chemically treated starches in item 493.3000, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 0.66 cent per pound.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director
New York Seaport

Mr. Peter Laternser
Max Felchlin AG
Bahnhofstrasse 63
CH 6430 Schwyz - Switzerland

Dear Mr. Laternser:

In your letter dated May 7, 1985, you inquired about the dutiable status of two food products, caramel cream and lacarot from Switzerland.

Caramel cream (TM 52 E) is a thick brown paste which will be imported in pails containing 5.5 kilograms each for use in the bakery and confectionery industry. This product will have the following composition expressed as a percentage of weight:

Cane or beet sugar	46.0
Moisture	18.0
Sorbitol	16.5
Vegetable fat	13.0
Non fat milk solids	5.0
Salt	1.0
Emulsifier	0.5

Lacarot (KB 80 E) is a similar product which will be imported in containers which hold 12 kilograms each. This substance is stated to have the following composition expressed as a percentage by weight:

Cane or beet sugar	35.0
Moisture	25.0
Carrot	14.0
Soy	11.0
Hazelnuts	9.0
Wheat starch	4.0
Corn syrup solids	2.0

As suggested in your letter both of these products are classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 10 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B10

Import quotas were established upon food products, containing cane or beet sugar, classifiable under item 183.05, TSUS, by Presidential Proclamation 5294 on January 2?, 1985. These restrictions were later modified, and in some cases lifted on certain products, by Presidential Proclamation 5340 of May 17, 1985. However, since both Caramel Cream and Lacarot contain in excess of 10 percent sugar by weight, are not prepared for retail sale, and do not appear to be similar to cake decorations which will be used in the condition as imported without any further processing, importation of these products would still be restricted.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Mantuge

Pacific Giant Inc.
13327 Paxton Street
Pacoima, CA 91331

Dear Ms. Burton:

In your letter dated May 13, 1985, you inquired about the dutiable status of Sea Jerky from Korea.

The subject merchandise is a sea food snack product composed of the following ingredients, listed in order of predominance by weight:

Minced Fish Meat (Surimi)	78.67 percent
Starch	9.16
D-Sorbitol	5.51
Sugar	2.15
Sorbistat K	0.01
Others	4.50

The product, marketed under the name, "Sea Jerky" is manufactured from Alaskan Pollack (Surimi) which is minced and processed into individual bite size strips. The snack is packaged in individual retail collapsible packs which weigh eight grams each. A sample package was tested by the New York Customs Laboratory and confirmed to be an airtight container.

Sea Jerky is classifiable under the provision for fish, prepared or preserved in any manner, not in oil, in airtight containers in item 112.1400, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 6 percent ad valorem.

The product, Sea Jerky, is not considered an edible preparation and thus is not within the scope of TSUS item 958.18 or other import restrictions provided for in part 3 of the Appendix to the Tariff Schedules.

Mr. Ronald Warren Saul
796 Center Street
Des Plaines, IL 60016

Dear Mr. Saul:

In your letter dated April 16, 1985, you inquired about the dutiable status of cake decorations from Holland. The submitted samples were consumed in analysis.

The cake decorations are known as sprinkles. The small rod shaped sprinkles are approximately one sixteenth of an inch in diameter and one quarter of an inch in length. The sprinkles are used to decorate cakes, ice cream, and similar confections. The composition of the chocolate flavored sprinkles is sugar 82 percent, vegetable fat 10 percent, cocoa powder 5 percent, lecithin 1 percent, and moisture 2 percent. The composition of the rainbow sprinkles is sugar 66.4 percent, vegetable fat 17.7 percent, wheat starch 11.5 percent, lactose 2.7 percent, lecithin .2 percent, and moisture 1.5 percent.

The chocolate sprinkles and the rainbow sprinkles are classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

All products classifiable under the provision for edible preparations, that contain cane or beet sugar, were placed under strict quota restraint by Presidential Proclamation 5294 on January 25, 1985. However, these restraints were later modified by Presidential Proclamation 5340 of May 17, 1985 which specifically exempted certain products from the restraints. Among these were:

> Cake decorations and similar products to be used in the same condition as imported without any further processing other than the direct application to individual pastries or confections...

The sprinkles you wish to import are covered by this exemption and they are not restricted at this time.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Dear Mr. Pamerleau:

In your letter dated May 9, 1985, you inquired about the dutiable status of a product named "Chocofix" from West Germany, on behalf of Oetker Ltd. of Mississauga, Ontario, Canada.

Chocofix is described as a chocolate flavored frosting for cakes, cookies, and ice cream. As imported, it is a thick paste sealed within a foil envelope which contains 100 grams of the product. The foil envelope is packaged within a small cardboard carton which instructs the retail consumer to place the envelope into hot water for five minutes or until the contents liquify. Once liquified, Chocofix may be poured onto the item to be frosted where it will solidify as it cools to room temperature.

The Chocofix formulation consists of the following ingredients expressed as a percentage of weight:

Hydrogenated vegetable fat	43.00
Cane or beet sugar	39.40
Cocoa	17.00
Lecithin	0.25
Vanillin	0.35

Chocofix is classifiable under the provision for confectioners coatings and other products (except confectionery) containing by weight not less than 6.8 percent non-fat solids of the cocoa bean nib and not less than 15 percent of vegetable fats other than cocoa butter in item 156.4700, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 2.5 percent ad valorem

New York, NY 10111

Dear Mr. Franks:

In your letter dated May 24, 1985, you inquired about the dutiable status of a modified sodium caseinate powder (Melfran 202-2) from Denmark.

The modified sodium caseinate powder identified as Melfran 202-2 is composed of 68 percent whey, 28 percent caseinate, and 4 percent butterfat. The caseinate is in chief value.

Melfran 202-2 is classifiable under the provision for casein and mixtures in chief value thereof: other in item 493.14, Tariff Schedules of the United States, and dutiable at the rate of 1.3 cents per pound.

Mixtures as indicated above, of caseinate and milk, are subject to quota restrictions and in the absence of a quota quantity may not enter the commerce of the United States. Please see "Additional Import Restrictions Proclaimed Pursuant to Section 22 of the Agricultural Adjustment Act, as Amended," in item 950.19, copy enclosed.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

3710 Commercial Avenue
Northbrook, Illinois 60062

Dear Mr. Fox:

In your letter dated June 7, 1985, you inquired about the dutiable status of a dry sugar/corn meal blend from Canada.

The product will be produced by blending 87 percent sugar and 13 percent corn meal. The mixture is intended for use as an animal feed ingredient. We assume that no separation of the sugar and corn meal will occur and that they are present in their final proportions and that neither sugar nor corn meal will be added to the mixture after importation.

This sugar/corn meal mixture would be classifiable under the provision for animal feeds and ingredients therefor, in item 184.8500, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. John A. Steer Company
136 Chestnut Street
Philadelphia, PA 19106

Dear Mr. Poole:

In your letter dated June 17, 1985, on behalf of your client, Bird-In-International, you inquired about the dutiable status of artifical crabmeat from Japan.

The artifical crabmeat is manufactured from both hake and pollack fish. The fish are processed, cooked with a crab flavoring and then frozen. The product will be marketed in the following forms; flakes and chunks shaped as crablegs, sticks, scallop shaped and scallop breaded sticks. This product is to be marketed as a ready to eat artifical crabmeat fish product.

The flakes and chunks, also shaped as crablegs, would be classified as follows:

1. If in airtight containers and made of pollack, as fish prepared or preserved in any manner, not in oil, under item 112.4000, Tariff Schedules of the United States Annotated, (TSUSA) and dutiable at the rate of 6 percent ad valorem.

2. If in airtight containers and made of hake, as fish prepared or preserved in any manner, not in oil, under item 112.3640, Tariff Schedules of the United States Annotated, (TSUSA) and dutiable at the rate of 6 percent ad valorem.

3. If not in airtight containers, and in bulk or in immediate containers weighing with their contents over 15 pounds each, as fish, prepared or preserved, not specially provided for, under item 113.5840, Tariff Schedules of the United States Annotated, (TSUSA) and free of duty.

C6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

4. If not in airtight containers, and not in bulk or not in immediate containers weighing with their contents over 15 pounds each, as other fish, prepared or preserved, not specially provided for, under item 113.6040, Tariff Schedules of the United States Annotated, (TSUSA) and dutiable at the rate of 6 percent, ad valorem.

The sticks and scallop shaped items would be classified as follows:

5. If in an airtight container, as fish balls, cakes, puddings, pastes, and sauces, under item 113.0800, Tariff Schedules of the United States Annotated, and free of duty.

6. If not in an airtight container, as fish balls, cakes, pudding, pastes and sauces, under item 113.1100, Tariff Schedules of the United States Annotated, (TSUSA) and dutiable at the rate of 6 percent ad valorem.

7. If in an immediate container weighing over 15 pounds, whether or not airtight, under item 113.1500, Tariff Schedules of the United States Annotated, (TSUSA) and dutiable at the rate of 9.8 percent ad valorem.

The scallop breaded sticks would be classified as follows:

8. If neither cooked nor in oil, as fish sticks and similar products of any size or shape, fillets, or other portions of fish, if breaded, coated with batter, or similarly prepared, under item 113.2000, Tariff Schedules of the United States Annotated, (TSUA) and dutiable at the rate of 10 percent ad valorem.

9. If either cooked or in oil as fish sticks and similar products of any size or shape, fillets, or other portions of fish, if breaded, coated with batter or similarly prepared under item 113.2500, Tariff Schedules of the United States Annotated, (TSUSA) and dutiable at the rate of 15 percent ad valorem.

Dear Mr. Poole:

In your letter dated June 17, 1985, you inquired about the dutiable status of artificial crabmeat from Japan.

This letter is a revision of the previous ruling issued to your company (copy attached), on September 20, 1985. A clerical error was made in the descriptions of the various types of artifical crabmeat products. The revisions are as follows:

1. For the classifications listed under items numbered 1 through 4, only the flakes and diagonally cut chunks would be classified as such.

2. For the classifications listed under items 5 through 7, only the sticks, crab leg and scallop shaped items would be classified as such.

3. For the classifications listed under items 8 and9 only the breaded scallops and breaded sticks would be classified as such.

The rulling is being issued under the provision of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1 (a)(1).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs Officer.

Mr. Peter Laternser
Max Felchlin Schwyz
Bahnhofstrasse 63
CH 6430 Schwyz
Switzerland

Dear Mr. Laternser:

In your letter dated June 11, 1985, you inquired about the dutiable status of food items from Switzerland.

Your inquiry requests classifications for the following.

1. DC 14E Praline Paste composed of 51 percent hazelnuts, 46 percent sugar and 3 percent vegetable fat is classifiable under the provision for filberts otherwise prepared or preserved in item 145.46, Tariff Schedules of the United States, and dutiable at the rate of 8 cents per pound.

2. KK 04E Marzipan composed of 51 percent almonds, 40 percent sucrose and 9 percent invert sugar exported in 7 kg. cartons is classifiable under the provision for almonds otherwise prepared or preserved, other in item 145.41, Tariff Schedules of the United States, and dutiable at the rate of 18.5 cents per pound.

3. FE 03E Serivosa, white composed of 51 percent powder sugar, 35 percent vegetable fat and 14 percent skim milk powder is classifiable under the provisions for other edible preparations in item 183.05, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

Articles and products containing sugar derived from sugar/cane or sugar beets, which are classifiable items 183.0520, TSUS, are currently subject to an absolute quota implemented by Presidential Proclamations 5294 and 5340. In general, products containing 10 percent or less by dry weight of cane or beet sugar, or if containing over 10 percent of such sugars, those products which are not principally of crystalline structure or not in a dry amorphous form, that are prepared for marketing to the retail

CLA-2-01:S:COM:N2E:232-813
814321

Mr. Clark D. Bien
Arbor Foods Incorporated
Post Office Box 7686
Ann Arbor, Mich 48107

Dear Mr. Bien:

In your letter dated June 24, 1985, you inquired about the dutiable status of four different combinations of chocolate liquor and sugar from Canada or to be produced in the Toledo, Ohio, Foreign Trade Zone.

These four combinations will have the following composition by weight:

	Chocolate Liquor	Cane or Beet Sugar
Combination 1	38 percent	62 percent
Combination 2	35 percent	65 percent
Combination 3	20 percent	80 percent
Combination 4	15 percent	85 percent

The method of production will be identical for each version of the product. Chocolate liquor will be combined with white granulated sugar, heated, and poured into either 40 or 55 gallon drums. When cooled and set, the product will form a solid block conforming to the shape of the drum. The submitted samples, which are assumed to have been produced in the same manner, are brown in color and quite grainy in structure.

It is your contention that all four varieties should be classified as sweetened chocolate under item 156.2500, Tariff Schedules of the United States Annotated (TSUSA). However, the United States Court of Customs and Patent Appeals held that sweetened chocolate would only contain "as much as 40 to 60 percent sugar". C.J. Van Houton & Zoon Blufries New York, Inc. v. United States, C.A.D. 775 (1961). The position of the Court has been consistently followed and endorsed by the Customs Service in all subsequent administrative decisions. In view of this past history of tariff classification, the products under consideration here would also be ineligible for classification as sweetened chocolate.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C13

Consequently, all four versions of this chocolate and sugar product would be classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 10 percent ad valorem.

Articles and products containing sugar derived from sugar cane or sugar beets, which are classifiable in item 156.4500, 183.0100, and 183.0520, TSUSA, are currently subject to absolute quotas as implemented by Presidential Proclamations 5294 and 5340. Since these products contain over 10 percent by dry weight of cane or beet sugar and will not be packaged for sale at retail at the time of importation, the quota will apply under item 958.18, TSUS. This provision currently restricts importations of the subject merchandise to 84,000 short tons in each calendar year commencing on the first day of October.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Mantuge
Area Director

President
Tradeshare Corporation
Building #77, Brooklyn Navy Yard
Brooklyn, New York 11205

Dear Mr. Krasnor:

In your letter dated June 20, 1985, you inquired about the dutiable status of sugar and gelatin blend from a Foreign Trade Zone.

The subject blend will be from 89 to 92.5 percent sugar and from 7.5 to 11 percent gelatin. The amounts will vary according to the bloom strength of the gelatin. The product is said to be in chief value of gelatin. Since you indicate components are not capable of separation, we assume no such separation will occur. Further, we assume that the sugar and gelatin are present in their final proportions and that neither gelatin nor sugar will be added to the blend after importation.

This sugar and gelatin blend is classifiable under the provision for edible preparations of gelatin in item 182.9000, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Mr. William J. Marston
William J. Marston
Customhouse Broker
11938 Waveland Avenue
Franklin Park, IL 60131

Dear Mr. Marston:

In your letter dated July 19, 1985, on behalf of your client, Mr. Cesar Conde, you inquired about the dutiable status of shark fins from Peru.

The enclosed sample is that of a shark's fin which has been skinned, cleaned and dried. It is the substance or meat of the fin after the outer flesh has been removed. The fin is hard, rigid, straw colored and untrimmed at the base. This product will be used in the preparation of shark fin soup.

Shark fin is classifiable under the provision for fish, dried, whether or not whole, but not otherwise prepared or preserved, and not in airtight containers in item 111.1500, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 0.2 cents per pound.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

for John J. Martuge

Mr. Charles L. Kantner
Kantner Trading Co.
713 N. Dixie Hwy. Box 424
Wapakoneta, Ohio 45895

Dear Mr. Kantner:

In your letter dated July 18, 1985, you inquired about the dutiable status of Goya cheese from Hungary.

A sample of the proposed cheese was submitted with the ruling request. Based upon a physical examination the cheese was found to be hard, pale yellow in color with a compact texture and irregular mechanical openings. An organoleptical examination proved the cheese to be of a salty nature with the piquant flavor of an Italian type cheese.

Based upon the information you provided, every effort has been made, on the part of the manufacturer, to duplicate Argentine Goya cheese in every important category. The submitted information indicates that your product meets the size and weight specifications of Argentine Goya and is said to have the correct butterfat and moisture content for this type cheese. The butterfat content is said to be in excess of 40 percent, on a dry basis, with a moisture content of 35 percent.

It should be noted that this cheese will be aged for five months prior to importation into the United States.

Goya cheese, in original loaves, from Hungary, similar to the sample provided, is classifiable under the provision for Goya cheese in item 117.4240, Tariff Schedules of the United States Annotated, (TSUSA), and dutiable at the rate of 25 percent ad valorem.

Cheese classified in item 117.4240 TSUSA is not subject to import quota quantity restrictions.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such

U & I Services, Inc.
P.O. Box 636
Tallman, New York 10982

Dear Mr. Frankenthal:

In your letter dated July 29, 1985, you inquired about the dutiable status of an ultra-filtrated milk protein concentrate powder from Israal.

The Ultra-filtrated milk protein powder is produced wholly from pasteurized milk. The whole milk is separated through a centrifugal process which removes the fat, leaving only skim milk. The skim milk is put through an ultra-filtration process which results in a solution of water, soluble carbohydrates, soluble minerals and retentate. The retentate is spray dried with the end product being a rich protein concentrate powder containing 60 per cent complete milk protein. This product is designed for use in baked articles as a protein enriched additive.

The ultra-filtrated milk protein concentrate powder is classifiable under the provision for milk protein concentrate in item 118.4500, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 0.2 cents per pound.

Articles classifiable under item 118.4500, TSUSA, which are the products of Israel are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Mr. Christopher J. Wilkinson
E. D. Smith & Sons, Ltd.
944 Highway #8
Winona, Ontario
Canada LOR 2LO

Dear Mr. Wilkinson:

In your letter dated August 1, 1985, you inquired about the dutiable status of various fruit pie fillings from Canada.

You submitted the product labels, the ingredient listings, and the promotional literature with your request for a ruling. In addition to being used as a pie filling, your products can be used for a range of purposes such as mixed with yogurt, poured over ice cream, parfaits, chicken sauce, souffles, or milk shake mixtures. The products will be sold in both small consumer and large institutional packs.

Classification would be as follows:

Product	TSUSA	Rate
Apple pie filling	146.1400	0.5 cent per lb.
Apple/Cherry pie filling	150.0200	7% ad valorem
Blueberry pie filling	146.7900	3.5% ad valorem
Cherry pie filling	146.9900	7 cents per lb. plus 10% ad valorem
Date pie filling	147.4800	35% ad valorem
Lemon pie filling	183.0520	10% ad valorem
Peach pie filling	148.7800	20% ad valorem
Pineapple pie filling	148.9820	0.38 cent per lb.
Pumpkin pie filling	141.9840	17.5% ad valorem
Raisin pie filling	147.7700	9.6% ad valorem
Raspberry pie filling	146.8400	7% ad valorem
Strawberry pie filling	146.8500	14% ad valorem
Rhubarb pie filling	150.0200	7% ad valorem

In your request for a ruling you stated your belief that these products are not subject to the sugar quota. We agree with your position that none of these pie filling products are subject to the sugar quota at this time.

Ms. Ellen DeCosmo
Rohm Tech Inc.
10 East 40th Street
New York, NY 10016

Dear Ms. DeCosmo:

In your letter of August 9, 1985, you asked for information about the tariff status of four chemicals from West Germany.

When produced from non-benzenoid sources 3,3,5 trimethylcyclohexyl acrylate and 3,3, 5 trimethylcyclohexyl methacrylate are classified under the provision for other esters of monohydric alcohols and organic or inorganic acids in item 428.7250, Tariff Schedules of the United States Annotated, (TSUSA). The rate of duty is 4 percent ad valorem. When produced from non-benzenoid sources maleic acid-mono-2-acryloyloxy ethylester is classified under the provision for other organic acids in item 425.9910, TSUSA. The rate of duty is 4.7 percent ad valorem.

When produced from benzenoid sources 3,3,5 trimethylcyclohexyl acrylate, 3,3, 5 trimethylcyclohexyl methacrylate and maleic acid mono-2-acryloyloxy ethylester are classified under the provision for other products derived form benzenoid sources in item 407.0600, TSUSA. The rate of duty is 13.5 percent ad valorem.

Benzyl methacrylate is classified under the provision for esters of a monocarboxylic acid other in item 404.3000, TSUSA. The rate of duty is 13.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Mr. Nobuo Ibaraki
Central Management Corporation
2150 East Thomas Road
Phoenix, Arizona 85016

Dear Mr. Ibaraki:

In your letter dated August 9, 1985, you inquired about the dutiable status of a crab flavored fish cake from Japan.

The crab flavored fish cake is composed, by weight of the following ingredients:

Pollack	55.0	percent
Crab Meat	10.0	percent
Egg White	8.0	percent
Potato Starch	5.0	percent
Crab Extract	1.4	percent
Salt	1.5	percent
Monosodium Glutamate	0.9	percent
Color	0.001	percent
Water	18.2	percent

The crab flavored fish cake, which contains 10 percent actual crab meat, is marketed as a precooked ready to eat fish product. Suggested uses indicate that the fish cake sticks can be combined with yogurt, herbs and spices to make a party snack dip or with eggs and vegetables to complete a salad. The fish cake sticks can also be re-heated and served as the main course for a dinner.

The item will be sold, on the retail level, in 3½ ounce packages with 6 fish cake sticks in a package.

The crab flavored fish cake sticks are classifiable under the provision for other minced seafood edible preparations, not specially provided for (including prepared meals individually packaged) in item 183.0505, Tariff Schedules of the United States Annotated, (TSUSA), and dutiable at the rate of 10 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

5618 Highway 332 East,
Freeport, Texas 77541

Dear Mr. Potts:

In your letter dated August 12, 1985, you inquired about the dutiable status of a chemical mixture from Japan.

According to your inquiry the product is used to prevent polymer deposits on stainless steel and glass.

OM-101A, based on the list of chemicals provided in your inquiry, is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be methanol classifiable under item 427.97, Tariff Schedules of the United States, and dutiable at the rate of 18.4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Seltzer Chemicals, Inc.
4940 Carroll Canyon Road
San Diego, CA 92121

Dear Ms. Sinda:

In your letter of August 14, 1985, you requested a ruling on the classification on a product of West Germany called Loxidan TD-100.

Loxidan TD-100 is a mixture composed of 1,2-dihydro-6-ethoxy-2,2,4-trimethylquinoline, gallic acid propyl ester, 2,6 di-t-butyl cresol and inorganic material.

Loxidan TD-100 is classified under the provision for mixtures in whole or in part of any of the products provided for in Schedule 4, part 1, subpart B, Tariff Schedules of the United States Annotated (TSUSA) in item 407.1610. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. When the gallic acid propyl ester is made from synthetic sources it is classified under the provision for other esters of a carboxylic acid in item 404.4600, TSUSA, at the rate of 1.7 cents per pound plus 17.9 percent ad valorem and this rate would apply to this product. When the gallic acid propyl ester is made from natural sources the mixture rate of 1.7 cents per pound plus 13.6 percent ad valorem would apply.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. The Harborside Financial Center
Jersey City, NJ 07302

Dear Mr. Link:

Your letter of August 7, 1985, written on behalf of your client, Krahn Chemie, requests the tariff status of eighteen chemical products. The products are from Switzerland, Spain and West Germany.

The following products are classified under the provision for benzenoid toners in item 410.2800, Tariff Schedules of the United States Annotated (TSUSA), and the rate of duty is 11.3 percent ad valorem:

Cromophtal yellow 3G	- Pigment Yellow 93
Cromophtal red BRN	- Pigment Red 144
Cromophtal yellow GR	- Pigment Yellow 95
Cromophtal orange 4R	- Pigment Orange 31
Cromophtal yellow 2RLTS	- Pigment Yellow 110

Chimassorb N-705 is [2,2'-thiobis (4-t-octylphenolato)]-n-butylamine Nickel. Cyasorb UV 1084 is [2,2'-thiobis (4-t-octylphenolato)]-N-butylamine Nickel (II). Both of these products are classified under the provision for other benzenoid products in item 406.6100, Tariff Schedules of the United States Annotated, (TSUSA). The rate of duty is 1.7 cents per pound plus 14.5 percent ad valorem.

Tinuvin 770 is di(2,2,6,6-tetramethyl-4-hydroxypiperidine)-sebacate. Tinuvin 770, when produced from benzenoid sources, is provided for in item 406.7300, TSUSA and the duty rate is 7.5 percent ad valorem. When produced from non-benzenoid sources it is classified under the provision for other nitrogenous compounds in item 425.5290, TSUSA at the rate of 7.9 percent ad valorem.

Cyasorb -UV531 is (2-hydroxy-4-n-octoxy benzophenone). It is classified under the provision for other ketone-phenols in item 403.9600, TSUSA. The rate of duty is 11.7 percent ad valorem.

Irganox 1010 is pentaerythrityl-tetrakis [3-(3,5-di-tert-butyl-4-hydroxyphenyl)-propionate]. Irganox 1076 is octadecyl 3-(3,5-di-tert-butyl-4-hydroxyphenyl)-propionate. Both of

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

these products are classified under the provision for other carboxylic acid derivatives in item 404.4600, TSUSA. The rate of duty is 1.7 cents per pound plus 17.9 percent ad valorem.

BHT/Ionol CP is 2,6-di-tert-butyl-p-cresol. It is classified under the provision for alkylcresols in item 403.1600, TSUSA, at the rate of 8.9 percent ad valorem.

Uvitex OB, an optical brightener, is classified under the provision for flourescent brighteners in item 409.9400, TSUSA. The rate of duty is 10.8 percent ad valorem.

With regard to the above products this is a ruling being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1 (a)(1)].

Your inquiry does not provide enough information for us to issue a tariff classification ruling for the balance of the products in your inquiry. Your request for a classification ruling for Irgazin yellow 3 RLTN and Irgazin red BPT should include the generic name and the Chemical Abstracts Service numbers. Your request concerning Tinuvin 144, Spinuvex A 36 and Irganox B 900 should include a complete chemical description of each product.

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Maringe

One Penn Plaza, Suite 1901
New York, NY 10119

Dear Mr. Weiss:

In your letter dated August 22, 1985, you inquired about the dutiable status of Ginseng Coffee from Korea.

The samples of the product submitted with your letter consist of a fine brown powder stated to have the following ingredients:

	by weight	by value
Ginseng extract	5 percent	57.37 percent
Soluble coffee	30 percent	34.43 percent
Lactose	50 percent	7.46 percent
Glucose	15 percent	0.74 percent

It is understood that this product will be used to prepare a beverage when combined with hot water.

Ginseng Coffee is classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem. Articles classifiable under this provision which are the products of Korea are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Since this product does not contain any cane or beet sugar it is not subject to the import restraints which were established by Presidential Proclamations 5294 and 5340 on similarly classifiable products which do contain cane or beet sugar. This product is also not considered to be subject to the requirements of the International Coffee Agreement. The questions you have posed regarding the requirements or restrictions under the regulations of the Food and Drug Administration should be made directly to:

Food and Drug Administration

Mr. Bob Bonnen
Farash International
10850 Southwest 113 Place
Miami, FL 33176

Dear Mr. Bonnen:

In your letter of August 18, 1985, you requested the tariff classification of a golf wrist trainer from Hong Kong or Taiwan.

The submitted sample is suede leather on the outside with a vinyl lining. An oval hole is cut at one end for the golfer's thumb. The wrist trainer tapers to wrap entirely around the golfer's hand and is secured by a velcro closure. Between the suede outer layer and the vinyl lining, a piece of slightly bent metal is sewn into the portion of the trainer that covers the back of the hand. When practicing a swing, this metal piece produces a clicking sound as the wrist is bent. This clicking sound will alert the golfer as to whether or not the wrist is being bent in the proper portion of the swing. Since the wrist trainer aids in improving the golfer's playing of the game of golf, it is properly considered to be equipment for that sport.

Accordingly, the wrist trainer is classifiable under the provision for other golf equipment in item 734.7780, Tariff Schedules of the United States Annotated, and is dutiable at the rate of 5.6 percent ad valorem.

Articles classifiable under item 734.7780, TSUSA, which are the products of Hong Kong or Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Marcel Nadeau
Stratton Power Equipment Co., Inc.
P.O. Box 356
Stratton, Maine 04982

Dear Mr. Nadeau:

In your letter dated August 29, 1985, you inquired about the dutiable status of an unripened cheddar cheese from Canada.

The unripened cheddar cheese is heavily salted. The salt content of this cheese makes it virtually impossible to cook with or to use it for any purpose other than as an hors d'oeuvre. The cheese is available in two forms. In one form the cheese will be imported in plastic bags. In the other form the cheese will be imported in a brine solution that is packed in a jar.

The cheddar cheese is classifiable under the provision for cheddar cheese: not processed otherwise than by division into pieces, in item 117.1520 as modified by item 950.08A and the provisions of headnote 3(a)(i) of part 3, appendix to the Tariff Schedules of the United States, and dutiable at the rate of 12 percent ad valorem.

Headnote 3(a) allocates the total quota quantity for Canadian cheddar cheese to cheese that has been certified by the Canadian government as having been made from unpasteurized milk and aged not less than 9 months. Consequently, Canadian cheddar cheese, as described in your letter, would not be permitted entry into the United States of America.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

R & M Chemicals, Limited
15909-114 Avenue
Edmonton, Alberta, Canada T5M 2Z3

Dear Mr. Thomas:

In your letter dated September 3, 1985, you inquired about the dutiable status of various chemical deodorizers from Canada.

According to your letter none of the chemicals in the mixture are benzenoid derived.

Based on this information Non-Formaldehyde granule is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. No component has a higher rate.

Non-Formaldehyde liquid made with non benzenoid derived chemicals is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate is ethoxylated lauryl alcohol classifiable under item 465.05, (Tariff Schedules of the United States), if derived from coconut, palm kernel, or palm oil, and dutiable at the rate of 1 cent per pound plus 5.1 percent ad valorem. When derived from any other source ethoxylated lauryl alcohol is classified under item 465.10, Tariff Schedules of the United States, and dutiable at the rate of 1.2 cents per pound plus 5.3 percent ad valorem.

Formaldehyde liquid is classifiable under the provision for formaldehyde (including solutions) in item 427.48, Tariff Schedules of the United States, and dutiable at the rate of 0.43 cents per pound.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

John J. Martuge
Area Director
New York Seaport

Mr. Douglas McEwen
Champlain Industries Limited
6535-21 Millcreek Drive
Mississauga Ontario
Canada L5N 2M2

Dear Mr. McEwen:

In your letter dated August 22, 1985, you inquired about the dutiable status of MNC - 129 Feed Concentrate from Canada.

MNC 129 Feed Concentrate is a reduced lactose whey that is supplemented with Riboflavin. This product is added to feed rations to raise the nutritional quality. A typical analysis of the product is as follows:

Moisture	7.0% max.
Protein	17.0± 1.0%
Ash	19.0± 2.0%
Riboflavin	1.0± 0.5%
Fat	2.0± 1.0%
Lactose	55.0± 3.0%
Acidity (lactic acid)	8.0% max.

MNC 129 Feed Concentrate is classifiable under the provision for for edible preparations not specially provided for: other, other: in item 183.0520, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be broght to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Fred E. Casino
Sidele Ltd.
3352 Marquette Crescent
Vancouver, B.C. Canada V5S 4K4

Dear Mr. Casino:

In your letter dated Setember 3, 1985, you inquired about the dutiable status of Nestle Cream from Canada.

Nestle Cream is a thick liquid cream product to be imported in tins. The butterfat content of the product is 25 percent. This product is to be marketed for specific ethnic groups, namely; Philipinos, Chinese and Vietnamese. It is an edible food product to be used as a dessert topping or as an additive for salads.

Nestle Cream, with a butterfat content of 25 percent is classifiable under the provision for fluid milk and cream, fresh or sour, containing over 5.5 percent but not over 45 percent of butterfat, in item 115.2000, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 12 cents per gallon.

Products classifiable in item 115.2000, TSUSA, are subject to import quotas established under Section 22 of the Agricultural Adjustment Act (7 U.S.C. 624) in item 949.80, Appendix to the Tariff Schedules. The total annual quota quantity of 1,500,000 gallons is allocated to New Zealand. As there is no current quota allocation for this class of merchandise from Canada, this product may not be imported from Canada.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Dear Ms. Cavorti:

In your letter dated September 3, 1985, you inquired about the dutiable status of various collagen mixtures from Spain.

According to the information contained in your inquiry these products will be used as ingredients in cosmetics.

Hyaluronidase is classifiable under the provisions for enzymes and ferments in item 437.4950, Tariff Schedules of the United States Annotated, and dutiable at the rate of 5 percent ad valorem.

Elastin, Collagen "P" and Collagen "S" are classifiable under the provision for mixtures of two or more organic compounds, in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 4.1 percent ad valorem, but not less than the highest rate applicable to any component material. The components with the highest rate are nitrogenous compounds, classifiable under item 425.52, Tariff Schedules of the United States, and dutiable at the rate of 7.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. NEW YORK, N.Y.

OCT 22 1985

[illegible]

Mr. Brandy R. Shorser
Staff Assistant Customs
Sears
National Headquarters
Sears Tower, Department 733A
Chicago, Il. 60684

Dear Mr. Shorser:

In your letter dated September 5, 1985, you inquired about the dutiable status of various accessories for the Teddy Ruxpin Toy Bear from Taiwan, Hong Kong, Korea, Macao and the Peoples Republic of China.

This classification request concerns the following accessories:

1. Flying Outfit
2. Hiking Outfit
3. Rain Outfit
4. Sleeping Outfit
5. Workout Outfit
6. Storybook
7. Pre-recorded animation cassette

Samples were submitted for the Flying Outfit, storybook and the pre-recorded animation cassette, and they will be returned to you as requested.

The Teddy Ruxpin Toy Bear is a battery operated 14 inch plush toy figure. In its operation, a specially designed pre-programmed animation cassette tape activates an electro-mechanical element incorporated in the figure resulting in the controlled movement and positioning of the eyes, nose and mouth of the figure. The tape component does not retain its individual identity because it is a specially programmed tape cassette, having not only an audio track but a second track programmed to activate animation. Its only practical use is in combination with the bear and its identity is subordinate to that of the combination.

The specially programmed animation cassette, when imported separately from the toy bear, is classifiable under the provision for parts of toys, in item 737.95, Tariff Schedules of the United States, and dutiable at the rate of 9.6 percent ad valorem. Articles classifiable under item 737.95, TSUS, are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations. Hong Kong and Taiwan are excepted from GSP status.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E12

It is your contention that the story book is classifiable under the provision for toy books, including coloring books and books the only reading matter in which consists of letters, numerals, or descriptive words in item 737.52. The provision is limited to books which contain letters or descriptive words. The storybook submitted for classification contains written materials which consists of lullabies and songs. The storybook is classifiable under the provision for books not specially provided for, wholly or in part the work of an author who is a national or domiciliary of the United States, in item 270.2560, TSUSA, and is duty free.

The outfits are specifically designed to be used with the Teddy Ruxpin Toy figure. The Flying Outfit consists of a red vest, jumpsuit, hood and a white scarf. The jumpsuit has a flap with velcro attachments on the back, measuring 4½ inches by 6 inches, which covers an opening measuring 3½ inches by 5 inches. The opening is utilized for easy access to the control panel on the toy figure. The hood has two cutouts for the bear's ears. The Hiking Outfit has a green vest, overalls, shirt with flap, cap with cutouts and shoes. The Rain Outfit comes with a yellow quilted raincoat, cap with cutouts and boots. The Sleeping Outfit consists of a red robe, footed pajamas with flap and a nightcap. The Workout Outfit has blue shorts and shirt, headband and shoes. The shirt has a slit situated in the back for access to the volume control panel on the bear. The flaps, slits and cutouts limit the use of the outfits to the Teddy Ruxpin bear.

All the outfits, when imported separately, are classifiable under the provision for other toys, in item 737.95, TSUS, and dutiable at the rate of 9.6 percent ad valorem. Articles classifiable under item 737.95, TSUS, are entitled to duty free treatment under the Generalized System Preferences (GSP) upon compliance with all applicable regulations. Hong Kong and Taiwan are exempted from GSP status.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Hartung

Mr. Peter Felix, Consul
Consulate General of Switzerland
444 Madison Avenue
New York, NY 10022

Dear Mr. Felix:

In your letter dated September 4, 1985, you inquired about the dutiable status of 16 Woly products from Switzerland.

The following products, all in immediate containers under 10 pounds each and used for cleaning and polishing are classifiable under the provision for blacking, powders, liquids, and creams for polishing and cleaning , all the foregoing in immediate containers holding not over 10 pounds each in item 493.1000 Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 2.6 percent ad valorem:

Woly Fresh (Spray for Suede)	Woly Lido (bottle/applicator)
Woly Multi Combi (Spray)	Woly Leather Cream (jars/tubes)
Woly Cleaner (Spray)	Woly Fashion (Tube)
Woly Mousse (Spray)	Woly Dubbin Cream (metallic tin)
Woly Propi (Spray)	Woly Wax-Color (tin applicator)
Woly Lanol (plastic bottle)	Woly Gum Velours

However, your inquiry does not provide enough information for us to give a classification ruling on Woly 3 x 3 activ (impregnating spray), Woly Lido White Spray, Woly Stretch (Spray), and the Woly sponge. Your request for a classification ruling should include the following information:

On the Woly sponge, please supply sample and advise type of synthetic material. For the balance of the above please advise composition of each chemical component, by volume, expressed in chemical abstract service terminology.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported.

Mr. P.C. Hereld
The Hereld Organization
401 Christopher Ave. - Suite 11
Gaithersburg, MD 20879

Dear Mr. Hereld:

In your letter of August 22, 1985, which was received in this office on September 11, 1985, you requested the tariff classification of coconut sugar from Thailand. The inquiry is being made on behalf of your client Vermont Maple Products of Wilmington, Vermont.

According to the information you have submitted, coconut sugar is produced in a manner similar to that employed for maple syrup or sugar. The coconut palm tree is tapped in order to obtain the sap or juice. The sap is then concentrated by boiling in open kettles until it achieves a near solid consistency. While you have stated that it is your client's intention to market this product as candy, the submitted sample is a formless mass consisting of a very thick paste which is not characteristic of candy or confectionery in the United States.

Accordingly, coconut sugar is classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem. Although composed of sucrose, the current sugar quotas would not apply since they only pertain to cane or beet sugar or products which contain cane or beet sugar.

Articles classifiable under item 183.0520, TSUS, which are the products of Thailand are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported.

Mr. Stephen M. Zelman
Siegel, Mandell & Davidson, P.C.
Counselors at Law
One Whitehall Street
New York, NY 10004

Dear Mr. Zelman:

Your letter of September 6, 1985, on behalf of New York Glove Co., Inc., requested a clarification of ruling 814377, dated August 22, 1985.

The subject gloves in ruling 814377 consisted of knit acrylic shells with vinyl palms and backs. The gloves were ornamented with decorative stitching.

In our ruling to you, we indicated that if the gloves were in chief value of vinyl, they were classifiable in item 705.8300, TSUSA. If in chief value of textile, they were classifiable in item 704.3240, TSUSA.

There are two issues that you would like clarified. The first one relates to whether the cost of the vinyl back is disregarded when determining chief value. The second issue raises the question as to whether the cost of the decorative stitching is attributed to the vinyl or the textile portions. Legal Determination 83.0024 is cited.

Schedule 3, Headnote 3(c), states that applique work, beads, bugles, spangles, bullions, and other forms of nontextile ornamentation applied to a textile fabric or other article of textile materials shall be disregarded in determining the component material of chief value of such fabric or other article.

The samples submitted in ruling 814377 did not contain nontextile applique work. Therefore, when determining the component material in chief value, the cost of the vinyl back is not disregarded.

With reference to the allocation costs of the decorative stitching, Customs has held that the cost of stitching the decoration onto the vinyl is attributed to the vinyl.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F4

In view of the above, the samples submitted in ruling 814377, when in chief value of vinyl, are classifiable in item 705.8300, Tariff Schedules of the United States Annotated (TSUSA). When in chief value of textile, they are classifiable in item 704.3240, TSUSA.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Dear Mr. Govani:

In your letter of September 9, 1985, you requested the tariff classification of various chemicals from India.

None of the chemicals for which you have requested rulings are subject to countervailing duties. The tariff classification and duties applicable to these products are listed below.

Terbutaline sulfate	411.9800	8.3 percent ad valorem
Quinine sulfate	437.0820	Free
Quinine hydrochloride	437.0820	Free
Trimethoprin	411.90	8.2 percent ad valorem
*Sulfamethoxazol	411.82	14.9 percent ad valorem
Dimenhydrinate	411.55	12.7 percent ad valorem
Mebendazole	411.93	10.9 percent ad valorem
*Berberine hydrochloride	437.2080	4.0 percent ad valorem
*Ammonium chloride	417.2600	3.1 percent ad valorem
*Ammonium sulfate	417.3800	3.3 percent ad valorem
*Ammonium ferrous sulfate	417.4540	3.3 percent ad valorem
Ferrous sulfate (Courser than 325 mesh)	418.9200	Free
*Ferrous sulfate (325 mesh or finer)	473.8820	3.3 percent ad valorem
*Nickle nitrate	419.7600	4.0 percent ad valorem
Magnesium sulfate	419.3600	Free
*Sodium nitrate (98% pure)	421.6280	4.0 percent ad valorem
Sodium nitrate (less than 98% pure)	480.2500	Free
*Zinc chloride	422.7200	1.7 percent ad valorem
*Zinc nitrate	422.7800	4.0 percent ad valorem

All items identified with an asterisk, which are the products of India are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Ian Sanderson
Marco Polo
10124 McDonald Park Road
Sidney, B.C. V8L 3X9
Canada

Dear Mr. Sanderson:

In your letter dated September 3, 1985, you inquired about the dutiable status of a molded rubber surf shoe from West Germany or Italy.

You state that you will purchase the shoe from a supplier in West Germany. However, the shoe is marked "Made in Italy".

The shoe is molded in a two step process. The dark blue outsole and sidewalls are molded in one step, and the turquoise upper and sock are molded in another step.

You state the Customs value of the shoe is under $3.

There are 4 holes in the upper which are 1/4 inch in diameter a little above where the foot rests.

Your sample, marked "Aqua Rapid", is classifiable under the provision for footwear; which is over 50% by weight of rubber; which has a rubber foxing-like band molded at the sole and overlapping the upper; and which is not protective against water, chemicals, or cold or inclement weather, in item 700.64, Tariff Schedules of the United States, and dutiable at the rate of 48 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Mr. John Pinna
Sales Manager
Roussel Corporation
155 East 44th Street
New York, NY 10017

Dear Mr. Pinna:

In your letter dated September 9, 1985, you inquired about the dutiable status of "Lunbeck's" bacitracin and zinc bacitracin from Denmark.

You stated that "Lunbecks" bactracin and zinc bacitracin are fermentation products that employ no benzenoid chemicals in their manufacture. It is your opinion that both products are natural antibiotics that are not artifically mixed and are classifiable in item 437.3000, Tariff Schedules of the United States Annotated (TSUSA). The flow chart and text submitted with your inquiry indicate that bacitracin is a natural antibiotic, not artificially mixed. The zinc bactitracin is made synthetically by reacting bacitracin with a zinc salt (typically zinc chloride).

"Lunbeck's" bacitracin is classifiable under the provision for non-benzenoid antibiotics, not artificially mixed in item 437.3000 (TSUSA), and dutiable at the rate of 1.9 percent ad valorem.

"Lunbeck's" zinc bacitracin is classifiable under the provision for non-benzenoid antibiotics, other in item 437.3250 (TSUSA), and dutiable at the rate of 4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Products of this type may be subject to the regulations of the Food and Drug Administration. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20857, telephone (202) 443-3380.

Mr. Robert J. Lipsitz
Kalimar, Inc.
622 Goddard Avenue
Chesterfield, Missouri 63017-1193

Dear Mr. Lipsitz:

Your letter of September 6, 1985 requested this office to rule upon the tariff classification of several photographic equipment bags from Korea.

You have provided five samples with your request. Two represent your series of Aires Custom bags, two your Aires Commander bags, and one is a bag for a disc camera. Each series consists of one styling which you plan to import in three colors of nylon oxford - silver, blue, and black - and in black polyurethane. The disc camera bag is said to be constructed of a linen material and will be imported in both blue and black. You have given individual style numbers to each color of the styling groups.

The Aires Custom and Aires Commander series are cushioned gadget bags used to carry cameras and other photographic equipment. The bags have one or more of the following features: exterior zippered pockets, adjustable shoulder straps, top zipper closures, and movable dividers within the main compartment to create storage sections according to size needs. Each of the disc camera bags has a top zipper closure, exterior pouch, and a swagger handle.

All of the nylon textile bags and the two linen disc camera bags have visibly braided coverings over extruded plastic pipings. The braid serves to clearly define side panels, end panels, and top flaps and, in our opinion, represents a significant use of braid.

The polyurethane bags identified as styles K-2125 and K-2132 are classifiable under the provision for luggage of other material, in item 706.6245, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 20 percent ad valorem.

The nylon textile bags identified as styles K-2121, K-2122, K-2124, K-2128, K-2129, and K-2131, as well as the linen bags identified as styles K-4000 and K-4001, when the linen is in chief value of textile materials other than cotton or abaca, are classifiable under the provision for luggage of textile materials, whether or not ornamented, wholly or in part of braid, in item 706.3420, TSUSA. The rate of duty is 11.6 percent ad valorem.

F11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

An article classifiable in item 706.3420, TSUSA, falls within textile category designation 670. As a product of Korea, this merchandise is not currently subject to any visa or quota restraints based upon international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

With respect to the balance of the bags listed, your inquiry does not provide enough information for us to issue a tariff classification ruling. Your request should include representative samples of each style and component material value breakdowns in U.S. dollars.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Your samples are being returned as requested.

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Mario F. Vivado
Woodside Management Systems, Inc.
131 Tremont Street
Boston, MA 02111

Dear Mr. Vivado:

In your letter of September 10, 1985, you asked about the dutiable status of gold jewelry from Bolivia.

The articles to be imported are 18-karat gold bracelets, earrings and necklaces, hand-made in Bolivia. You state that the jewelry will be "unset"; that is, not set with precious or semiprecious stones.

The 18K gold bracelets, earrings and other 18K gold jewelry articles (other than necklaces and neck chains) are classifiable under the provision for jewelry and other objects of personal adornment, of precious metals, in item 740.14, Tariff Schedules of the United States (TSUS), and are dutiable at the rate of 7.9 percent ad valorem.

The 18K gold necklaces are classifiable under the provision for jewelry and other objects of personal adornment... of precious metals: necklaces and neck chains, almost wholly of gold, in item 740.11, 740.12 or 740.13, TSUS, depending on the type of link.

Rope necklaces and neck chains are classifiable in item 740.11.

Mixed link necklaces and neck chains are classifiable in item 740.12. The term "mixed link" refers to a chain composed of two or more styles or types of link.

Necklaces and neck chains made of other link construction -- for example, cobra, herringbone -- are classifiable in item 740.13.

The rate of duty for items 740.11, 740.12 and 740.13 is 7.9 percent ad valorem.

Articles classifiable under item 740.11, 740.12, 740.13 and 740.14, TSUS, which are the products of Bolivia are entitled to duty-free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Dr. Simon M. Carroll
2193 Oakdale Road
Cleveland Heights, Ohio 44118

Dear Dr. Carroll:

In your letter dated September 11, 1985, you inquired about the dutiable status of biological materials from France.

The products are to be used in the manufacture of cheese and are described as follows: Penicillium Candidum spores in both lyophilized state and Hyptonic (R) support medium, together with P glaucum spores. You also inquired about Mesophilic Streptococcus SPP "starter" cultures in the lyophilized state.

The Penicillium candidum spores in both forms and the Mesophilic Streptococcus SPP starter cultures in a lyophilized state are classifiable under the provision for ferments, other in item 437.4980, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

These products are subject to the regulations of the Department of Agriculture, Animal, Plant, Health Inspection Service. You may contact them at the Federal Building, Hyattsville, Md. 20782, telephone number (301) 436-7633.

Mr. Kenneth G. Flynn
KVK USA, Inc.
19A Home News Row
New Brunswick, New Jersey 08901

Dear Mr. Flynn:

In your letter dated September 10, 1985, you inquired about the dutiable status of Predisol TR-CAB 602 from Denmark.

A sample of Predisol TR-CAB, 602 lot 0560611 was tested by the United States Customs Laboratory. The sample was reported out as friable dark red flakes and powders, composed essentially of a non-benzenoid synthetic plastics material and synthetic-iron oxide. The importer has advised Customs that this material is used in coatings used for painting automobiles.

Predisol TR-CAB 602 is classifiable under the provision for synthetic iron oxides and iron hydroxides in item 473.3020, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Kettlitz-Chemie GmbH & Co. KG
Postfach 80
D8859 Rennertshofen, West Germany

Dear Sirs:

In your letter dated September 3, 1985, you inquired about the dutiable status of five chemical products for the rubber industry from West Germany.

Dispergator FL containing calcium stearate, silica and fatty acid esters, is classifiable as a mixture not specially provided for in item 432.2500, Tariff Schedules of the Untied States Annotated (TSUSA), and is dutiable at the rate of 4 percent ad valorem but not less than the highest rate applicable to any component material. When the calcium stearate contained in Dispergator FL is derived from linseed oil it is classifiable in item 490.4400, TSUSA and is dutiable at the rate of 7.4 percent ad valorem. When the calcium stearate is derived from animal sources it is classifiable in item 490.3200, TSUSA, and is dutiable at the rate of 4.7 percent ad valorem. When the calcium stearate is derived from hempseed, kapok, perilla, rapeseed, sesame or sunflower oil it is classifiable in item 490.4600, TSUSA, and is dutiable at the rate of 4.4 percent ad valorem.

Dispergator KB is a mixture of hydrocarbons, silica, waxes and stearic acid. Dispergator OX is a mixture of hydrocarbons, fatty acids, silica and zinc stearate. Kezadol GR is a mixture of calcium oxide and hydrocarbons. These three products are classified under the provision for mixtures in whole or in part of any of the products provided for in Schedule 4, part 1, subpart B, TSUSA, in item 407.1610. The rate of duty is 1.7¢ per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. Based on the alkyl benzene content in the hydrocarbon portion of the mixtures the rate of duty would be 0.8 cent per pound plus 17.3 percent ad valorem from item 402.3600, TSUSA.

With regard to these four products, this is a ruling issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

With regard to the product called Mediaplast WH/P, your inquiry does not furnish enough information for us to give a classification ruling. Your request should include the correct Chemical Abstracts Service name and number for the resin component of that product.

26 Broadway
New York, NY 10004

Dear Mr. Phelan:

In your letter dated September 17, 1985, you inquired on behalf of your client, Tenneco Paper Chemicals of Canada, about the dutiable status of Malros NL70 and Malros NL77 from Canada.

According to your inquiry there products will be used to size paper against liquid penetration.

Malros NL 70 and Malros NL 77 are classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate is unneutralized tall oil rosin classifiable under item 188.50, Tariff Schedules of the United States, and dutiable at the rate of 5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Postfach 1150/1160
D-8223 Trostberg, West Germany

Dear DI. Graef and Dr. Plank:

In your letter dated September 10, 1985, you inquired about the dutiable status of a thickening agent from West Germany.

According to your inquiry these products are chemically modified polysaccharides.

Guar gum 2 hydroxethyl ether, guar gum 2 hydroxypropyl ether or guar gum 2 hydroxyproply ether, depolymerized are classifiable under the provision for ethers of polyhydric alcohols, other in item 428.47, Tariff Schedules of the United States, and dutiable at the rate of 12.3 percent ad valorem.

Mixtures of any of these compounds would be classifiable under the provision for mixtures of two or more organic compounds in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 4.1 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate would be any of the above guar gum compounds which are classifiable under item 428.47, Tariff Schedules of the United States, and dutiable at the rate of 12.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. G. T. Marsh
BASF Systems Corporation
Crosby Drive
Bedford, MA 01730-1471

Dear Mr. Marsh:

In your letter dated September 20, 1985, you inquired about the dutiable status of five chemical products, namely Robane, Uniwax, Duomeen TDO, Pioloform FN-50 and Zinc Stearate from West Germany.

Robane, a clear colorless liquid, is squalane, a non-benzenoid hydrocarbon derived from animal sources. It is classifiable under the provision for hydrocarbons other,in item 429.5620, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the rate of 4 percent ad valorem.

Uniwax, a white granular powder, is stearylamide, a fatty acid amide. This product is classifiable under the provision for fatty substances of animal or vegetable origin: not sulfonated or sulfated: fatty-acid amides, amines, and quaternary ammonium salts. When derived from coconut, palm-kernel or palm oil, it is classifiable in item 465.1500, TSUSA, dutiable at 1.1 cents per pound, plus 5.3 percent ad valorem. When derived from other sources, the Uniwax is classifiable in item 465.2020, TSUSA, dutiable at the rate of 1.2 cents per pound, plus 5.3 percent ad valorem.

Duomeen TDO, an amber grease, is a fatty amine, derived from animal sources. It is classifiable under the provision for fatty substances of animal or vegetable origin: not sulfonated or sulfated: fatty-acid amides, amines, and quaternary ammonium salts, other, in item 465.2020, TSUS, dutiable at the rate of 1.2 cents per pound, plus 5.3 percent ad valorem.

Pioloform FN-50, a tan granular solid, is not polyvinyl formal, as indicated in your correspondence. It is a terpolymer of vinyl formal, vinyl acetate and vinyl alcohol. It is classifiable under the provision for synthetic plastics material, vinyl resins, polyvinyl acetate and vinyl resins containing by weight 50 percent or more of derivatives of vinyl acetate, other, in item 445.4400, TSUSA. The rate of duty is 4 percent ad valorem.

68

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Zinc stearate, a white powder, is classifiable under the provision for fatty substances, not sulfonated or sulfated, and not specially provided for, salts, of animal origin, other, in item 490.3200, TSUSA, dutiable at the rate of 4.7 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. John Sveum
W.Y. Moberly, Inc.
Box 164
Sweetgrass, MT 59484

Dear Mr. Sveum:

In your letter dated September 11, 1985, on behalf of your client GPA International, you inquired about the dutiable status of an "Oil Patch Kids" package.

A sample was submitted with your inquiry. The "Oil Patch Kids" is a package consisting of a small stuffed doll, a stuffed oil drop, a well license and a plastic miniature oil drum. The doll and oil drop are manufactured in Hong Kong while the plastic oil drum is manufactured in Canada.

The doll, called the "Oil Patch Kids", measures approximately 10 inches in length and has a stuffed textile body, plastic head and black yarn hair. The doll is wearing yellow fabric overalls with a gold plastic hat. The stuffed oil drop, called the "Patch Pet", measuring 3 inches in length, is made of black velvet with yellow felt feet and plastic eyes. The plastic oil can, measuring 8 inches in height and 5 inches in diameter, is made of clear gray plastic and has a removable lid. The well license is a yellow piece of paper measuring 8¼ inches by 5¼ inches.

Your contention is that the package is correctly classified as an entirety in item 737.23, under the provision for stuffed dolls. We disagree, the articles are separately classifiable. It is a well established principle of Customs law that to constitute an entirety for tariff purposes a combination of two or more articles must be so joined together or merged that the whole creates a new and different article with a new name and use. The doll, oil drop and plastic container in issue are separate entities, individually identifiable. That they are sold as a unit and are obviously intended to be used together are not criteria for their tariff classification as an entity. The items in issue, when used together, retain their separate entities, and each performs its separate function without the loss of any its essential characteristics. However, the oil well license would not be considered a commercial entity, since the value of the sheet is incidental to the entire package.

The "Oil Patch Kids" doll and oil well license are classifiable under the provision for stuffed dolls in item 737.2300, Tariff Schedules of the United States Annotated, and dutiable at the the rate of 13.4 percent ad valorem. Articles classifiable under item 737.2300, TSUSA, are subject to the provisions of item 912.3000, TSUSA, under which the merchandise will be free of duty if entered on or before December 31, 1985.

G10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The "Patch Pet" oil drop is classifiable under the provision for other toys in item 737.9505, TSUSA, and dutiable at the rate of 9.2 percent ad valorem.

The plastic miniature oil drum is classifiable under the provision for household articles not specially provided for of rubber or plastics in item 772.1500, TSUSA, and dutiable at the rate of 4.7 percent ad valorem.

You also attached copyright documents and trademark applications. Your copyright documents are registered with the Copyright Office in Canada, however, in order to be afforded copyright protection in the U.S., they must be registered with the U.S. Customs Service.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Mr. Oded Amir
Steiner Representations, Inc.
3510 Biscayne Boulevard
Miami, Florida 33137

Dear Mr. Amir:

In your letter dated September 12, 1985, you inquired about the dutiable status of frozen orange juice concentrate from Brazil.

According to your submitted analysis the frozen orange juice concentrate has a Brix value of 65 degrees. The concentrate will be imported by your firm in drums and will be reconstituted and repacked by another firm in the United States.

Frozen concentrated orange juice is classifiable under the provision for fruit juices, concentrated, whether or not sweetened, not containing over 1.0 percent of ethyl alcohol by volume, orange, other, in item 165.2900, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 35 cents per gallon. According to Schedule 1, Part 12A, Headnote 3(a), TSUSA, the term gallon for duty purposes means a gallon of natural unconcentrated juice or gallon of reconstituted juice.

The final repacked product of orange juice containing foreign concentrate must be marked with the country of origin of the imported concentrate. In accordance with Customs Regulations (19 CFR 134.25), you are required to certify to Customs that the retail packages of orange juice will be properly marked and that you will notify the repacker of the marking requirements.

With respect to your request for further general information on the binding ruling procedures, we are enclosing a copy of the pertinent pages in the Customs Regulations (19 C.F.R. 177.1 and 177.2).

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported.

Mr. Martin Friedman
Beverly Hills Beverage Company
9440 Santa Monica Blvd, Suite 800
Beverly Hills, CA 90210

Dear Mr. Friedman:

In your letter dated August 14, 1985, which was received in our office on September 24, 1985, you inquired about the dutiable status of a beer drink from France.

In a telephone conversation with National Import Specialist Walter Springer, you explained that the beverage is produced by mixing ordinary beer with fruit juice. The drink will contain one percent alcohol by volume. It will be imported in bottles or cans.

The beer drink is classifiable under the provision for other fermented alcoholic beverages in item 167.5000, Tariff Schedules of the United States Annotated, and dutiable at the rate of 25 cents per gallon. In addition to the import duty, the beer drink is subject to a Federal Excise Tax (26 U.S.C. 5051) of $9 per barrel of 31 gallons, and at a like rate for any other quantity or for fractional parts of a barrel.

A Federal license is required in order to import this product. Licenses and information on labelling may be obtained from the Bureau of Alcohol, Tobacco, and Firearms, located at 1200 Pennsylvania Avenue, N.W., Washington, D.C., 20226. In addition, the appropriate liquor authority in your state should be contacted for their requirements.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

[redacted]

Re: [redacted]

Dear [redacted]

This is in further reference to the above-captioned company's application for a rate of drawback on butterfly wing assemblies (needles) manufactured under the provisions of title 19, United States Code, section 1313(b), with the use of cannula (needles), and correspondence relative thereto.

In your letter dated June 11, 1976, you have requested that drawback be allowed under the authorization requested on exportations made on and after August 1, 1973, although the application for drawback was not received by the Regional Commissioner of Customs, Chicago, Illinois, until January 21, 1975. Section 22.4(n) of the Customs Regulations provides:

> In no case shall drawback be allowed on articles which were exported before the date of receipt by the collector or deputy collector of the application which resulted in the preparation of the statement on which the rate or collector's letter of approval was based.

In view of the foregoing provisions of the regulations and of the fact that the application was not received by the Regional Commissioner at Chicago, Illinois, until January 21, 1975, the U.S. Customs Service must deny the manufacturer's request with respect to exportation of products before that date.

Sincerely yours,

[redacted]

(Signed) J. P. TEBEAU

DRA-1-R:CD:D JL
207606

207606

[redacted]

Reference: Request for ruling dated March 29, 1977, regarding effective date of exportation for drawback claimants

Dear [redacted]

You ask in the above referenced request for ruling whether the fact that a drawback claimant has an established rate of drawback would permit him to use the date of filing of his first application as the base date for exportation in all subsequently-issued rates of drawback. You ask this question in the context of the drawback committee's understanding that Headquarters, U. S. Customs Service, now prefers, whenever possible, to issue new rates of drawback rather than amendments to existing rates held by manufacturers.

Initially, we would like to point out that your understanding is correct in that Headquarters prefers to treat applications for amendment of existing drawback rates, when appropriate, separately from existing rates and, in fact, has for some time been requiring that a complete drawback statement be submitted before the rate is approved, rather than the abbreviated statement previously required. As you know, section 22.4(n), Customs Regulations, states that drawback shall not be allowed on articles which were exported before the date of receipt by the collector or deputy collector (now district director) of the application which resulted in the preparation of the statement on which the rate or collector's letter of approval was based. Section 22.4(o) provides that when a manufacturer in whose behalf a rate of drawback has been established desires to have his rate amended to cover additional factories, to permit the use of other kinds of imported duty paid merchandise or drawback products, to provide for a different basis for liquidation of drawback entries, or to cover different methods of identification or manufacture, or other changes, he shall file an application with Headquarters, the regional commissioner, district director, or port director of Customs, as may be appropriate. It is also provided therein that no drawback

A4

[redacted]

shall be allowed on articles exported before the date on which the application was received by the appropriate officer unless specifically authorized by Headquarters, or by the regional commissioner in cases within the provisions of section 22.6, or as set out in section 22.4(o).

As can be seen from the above, the effective dates of amendments to rates of drawback may under the authority of section 22.4(o), Customs Regulations, be made effective as of a date prior to the receipt of the application for amendment. For that reason, Headquarters has held for a number of years that when a rate could have been issued as an amendment to an existing rate of drawback, the effective dates of the new rate may antedate the receipt of the application when the company so requests, or when Headquarters concluded that it would be preferable to issue a new drawback rate based on the manufacturer's statement. A brief glance at Headquarters records indicates that this policy has been in effect for more than 18 years.

We find that in requiring the completion of a new drawback statement by manufacturers in those instances involving applications covering all but what would have been the most rudimentary request for an amendment such as change of factory, change of company name, etc., the cumbersome task of reciting and reaffirming all previously issued rates of drawback in the opening part of the drawback statement is eliminated. Further, the statement submitted is in conformance with the latest provisions of the Customs Regulations and the approved statement format regarding records to be kept, etc. As you are well aware, many companies have drawback rates in effect for many years involving numerous amendments, changes of company name, changes of processes, and so forth. Previously, it was necessary for the drawback liquidator to begin with the first rate issued to the company and follow all rates issued pertinent to the amendment in order to obtain a clear picture of the background necessary to liquidate claims under the most recent amendment. The same procedure would be necessary for the audit personnel performing claims verifications and for Headquarters attorneys handling drawback cases. This procedure of repeatedly amending existing rates also led to large and cumbersome case files in Headquarters and at the regional level. We find that the new procedure has greatly alleviated these problems.

To answer your question then, manufacturers or producers in whose behalf a rate of drawback is in existence may have the effective date of a new rate of drawback antedate the receipt of the application for an amendment, provided the rate could have been issued as an amendment under section 22.4(o), Customs Regulations.

Sincerely yours,

George C. Steuart

Mr. N. M. Williams
Rimark Soft Drinks Ltd.
Denington Estate, Wellingborough
Northants, NN8 2QJ England

Dear Mr. Williams:

In your letter dated September 20, 1985, you inquired about the dutiable status of five concentrated fruit drink products from England.

According to samples submitted by you, the products consist of St. Clements Orange Squash, Lemon Squash, Lime Juice Cordial, Orange Barleywater and Lemon Barleywater. The first three products contain water, 37 percent juice, sugar, malic acid, preservatives and flavorings. The other products contain water, sugar, 22½ percent juice, barley flour, citric acid, flavorings, stabilizers and preservatives. All products must be diluted with water prior to being consumed as a beverage.

An analysis of the samples was made by the Customs Laboratory. Based on the results these products are determined not to be fruit juices or flavored syrups. In addition, these products are not fit for use as beverages in their condition as imported.

The St. Clements concentrated fruit drink products are classifiable under the provision for other edible preparations not specially provided for, in item 183.0520, Tariff Schedules of the United States Annotated, and dutiable at the rate of 10 percent ad valorem. This rate will remain the same in 1986. Products such as these are not currently subject to any import quotas or similar restrictions.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1).

Sincerely,

John J. Martuge
Area Director
New York Seaport

Dr. Jan C. Meneley
Director
Microbial Resources
507 Lambeth Place
Newark, Delaware 19711

Dear Dr. Meneley:

In your letter dated September 16, 1985, you inquired about the dutiable status of "Biobit" and "Skeetal" from England.

"Biobit" and "Skeetal" are living bacterial formulations made by fermentation. They are natural toxins that function as pesticides and they will be imported in flowable concentrate form.

"Biobit" is composed of 15 percent Bacillus thuringiensis Berliner VAR. Kurastaki, primary powder fermentation product and 85 percent inert ingredients. "Biobit" is a stomach poison and has highly specific activity against lepidopterous caterpillars. "Skeetal" is composed of 15 percent Bacillus thuringiensis israelensis (H14) and 85 percent inert ingredients. "Skeetal" is a larvicide dependent upon the presence of a selective natural toxin which when eaten by the mosquito or blackfly breaks down in the insects gut causing paralysis and death within 4-8 hours.

"Biobit" and "Skeetal" are classifiable under the provision for toxins in item 437.7600, Tariff Schedules of the United States Annotated (TSUSA), are free of duty.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Mr. Svend A. Koch
Swen Baking Institute Ltd.
#2-1064 C Austin Avenue
Coquit Lane, B.C., Canada V3K 3P3

Dear Mr. Koch:

In your letter dated September 3, 1985, you inquired about the dutiable status of, Conditor Buttercream from Canada.

The product, Conditor Buttercream, a birthday cake icing, is composed, by weight, of the following ingredients:

Vegetable Oil	60 per cent
Sugar	23 per cent
Water	15.3 per cent
Milk Powder	1 per cent
Salt	0.5 per cent
Mono and Diglcerides	0.2 per cent
Flavor	0.01 per cent
Beta-Caroten	0.001 per cent

The birthday cake icing, intended for use by the commercial baking industry, will imported in cases containing two 5.5 kilogram size sticks. These sticks, with the consistency of margarine, are to be left at room temperature for 24 hours prior to use. The icing is to be whipped at high speed until the desired consistency is achieved. It is then ready for use and can either be applied to a baked product or stored at a refrigerated temperature for future use.

The birthday cake icing is classifiable under the provision for edible preparations, not specially provided for in item 183.0520, Tariff Schedules of the United States (Annotated) TSUSA, and dutiable at the rate of 10 percent ad valorem. Ordinarily, products classifiable under this provision, which contain cane or beet sugar and are not prepared for sale at retail in the condition as imported, are subject to import quotas under a variety of recently enacted tariff provisions. However, Presidential Proclamation 5340 of May 17, 1985 specifically exempted a number of specialty products from these restrictions including cake decorations and similar products to be used in the same condition as imported with any further processing other than the direct application to individual pastries or confections.

A9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Accordingly, this birthday cake icing is not subject to import quotas or restrictions at this time.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Loyk. Durung

Mr. Danial Rainer
Director International Trade Affairs
Hasbro Industries, Inc.
41 Madison Avenue
New York, NY 10010

Dear Mr. Rainer:

In your letter dated September 23, 1985, you inquired about the dutiable status of item #4595, a quilted textile shoulder bag from Hong Kong.

The sample bag is described as being intended to be a doll's diaper bag. It is said to be made of a fabric which is of cotton and man-made fiber and probably in chief value of man-made fiber. The bag is a shoulder bag which measures 12 inches x 9 inches x 3 inches. Its exterior is quilted. The flap is closed by means of a velcro closure and it can be used as a changing pad. There is a "Real Baby" motif sewn to the flap.

Item 4595 is classifiable under the provision for handbags, of other textile materials, other, in item 706.4140, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 20 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Ms. L. Cavorti
Centerchem, Inc.
660 White Plains Rd.
Tarrytown, New York 10591

Dear Ms. Cavorti:

Your letter of July 8, 1985, received in this office September 30, 1985, concerns the dutiable status of Isopal, OH-Isostearyl and Surgrassante 22584 from Spain.

The analysis of Isopal by our laboratory indicates that it is isostearyl palmitate. Isopal is classifiable under the provision for fatty substances, not sulfonated or sulfated, and not specially provided for, esters. When derived from animal sources, it is classifiable in item 490.9000, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the rate of 4.2 percent ad valorem; when derived from coconut, palm-kernel, or palm oil, it is classifiable in item 490.9200, TSUSA, dutiable at 4 percent ad valorem, and when derived from other sources, it is classifiable in item 490.9400, TSUSA, other, with a rate of duty of 4 percent ad valorem.

Surgrassante 22584 is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be polypropylene glycol ether of lanolin alcohol classifiable under item 428.4780, TSUSA, and dutiable at the rate of 12.3 percent ad valorem.

OH-Isostearyl has been analyzed by our laboratory as isostearyl lactate, a non-benzenoid ester of a monohydric alcohol, other. If this product is pertroleum-derived, it is classifiable under the provision for esters of monohydric alcohols and organic or inorganic acids (except hydrogen sulfide and hydrogen halide acids), in item 428.7250, TSUSA, dutiable at the rate of 4 percent ad valorem.

When the OH-Isostearyl is derived from animal, vegetable or from other sources, it is classifiable under the provision for fatty substances, not sulfonated or sulfated, and not specially provided for, esters. When derived from animal, including marine animal, it is classifiable in item 490.9000, TSUSA, dutiable at 4.2 percent ad valorem.

A12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

When the OH-Isostearyl is derived from coconut, palm-kernel or palm oil, it is classifiable in item 490.9200, TSUSA, at the rate of 4 percent ad valorem. And when derived from other sources, it is classifiable in item 490.9400, TSUS, dutiable at 4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Centerchem, Incorporated
660 White Plains Road
Tarrytown, NY 10591

Dear Ms. Cavorti:

In your letter dated July 8, 1985, received on September 30, 1985, you inquired about the dutiable status of various collagen products to be used in the manufacture of cosmetics from Spain.

According to your inquiry you submitted documentation and samples for four products. We have received only two, Elastovit and Nutroderm DL.

Based on our analysis Elastovit and Nutroderm DL are aqueous solutions of a mixture of polypeptides and are classifiable under the provision for mixtures of two or more organic compounds in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 4.1 percent ad valorem, but not less than the highest rate applicable to any component compound. The highest rate applicable is for nitrogenous compounds classifiable under the provision for nitrogenous compounds, other in item 425.52, Tariff Schedules of the United States, and dutiable at the rate of 7.9 percent ad valorem.

However, your inquiry does not provide enough information for us to give a classification ruling on NMF/Z1 and PCA Arginine. Your request for a classification ruling should include the chemical name of each product. If a mixture, give the chemical name of each compound in the mixture, the percentage and use in the product. When giving the chemical name please use the Chemical Abstract Service name for each chemical compound.

With respect to Elastovit and Nutroderm DL, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)]. For the balance of the merchandise, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations [19 C.F.R. 177.1(d)(2)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported.

Tarrytown, NY 10591

Dear Ms. Cavorti:

In your letter dated July 8, 1985 received on September 30, 1985, you inquired about the dutiable status of various chemicals from Spain to be used in the manufacture of cosmetics.

Evosine 1P07 R is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. No component has a higher rate.

Evosine SBS R is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be propylene glycol classifiable under item 428.30, Tariff Schedules of the United States, and dutiable at the rate of 11.5 percent ad valorem.

Biostat is classifiable under the provision for mixtures of two or more organic compounds in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 4.1 percent ad valorem, but not less than the highest rate applicable to any component compound. The highest rate applicable is for diethylene glycol classifiable under the provision for diethylene glycol in item 428.47, Tariff Schedules of the United States, and dutiable at the rate of 12.3 percent ad valorem.

However, your inquiry does not provide enough information for us to give a classification ruling on Echinacine and Evosine NA2 R. Your request for a classification ruling should include the chemical name of each compound using the Chemcial Abstract Service terminology and if a mixture, the percentage and use in the mixture of each compound.

B2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

With respect to Biostat, Evosine 1P07 R and Evosine SBS R, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)]. For the balance of the merchandise, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations [19 C.F.R. 177.1(d)(2)].

Centerchem, Inc.
660 White Plains Road
Tarrytown, NY 10591

Dear Ms. Cavorti:

Your letter of July 8, 1985, received in this office September 30, 1985, concerns the dutiable status of four products named P.C.A. Lysine, Protean 50, Protean NC and Protean SH from Spain. Samples of Protean NC and Protean SH, and technical literature were submitted to this office.

The Protean NC and Protean SH samples, analyzed by our laboratory, are both aqueous solutions of a mixture of polypeptides which have been hydrolyzed. Accordingly, they are both classifiable under the provision for mixtures of two or more organic compounds, other, in item 430.2040, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 4.1 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate is the nitrogenous compound classifiable under item 425.5290, TSUSA, with duty at the rate of 7.9 percent ad valorem.

Since this office did not receive samples or technical literature with respect to the products trade-named P.C.A. Lysine and Protean 50, this office is unable to issue tariff classification rulings for these products. Requests for rulings must be submitted in accordance with Part 177 of the Customs Regulations.

Please submit a complete breakdown, including the chemical abstract name, the chemical formula, and use with respect to each product.

As provided for in part 177.3 of the Customs Regulations (19 C.F.R. 177.3), we will keep your request for tariff classification rulings regarding the P.C.A. Lysine and Protean 50 open for 30 days from the date of this letter. If you are unable to provide the requested information within that time, we will remove your request from active consideration.

We regard to the Protean NC and Protean SH, this is a ruling issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Mr. Bradley H. Shorser
Staff Assistant - Customs
Sears Merchandise Group
Sears Tower - Department 733X
Chicago, Illinois 60684

Dear Mr. Shorser:

Your letter of September 30, 1985 requested this office to rule upon the tariff classification of a man-made textile stuff bag from Korea.

The sample submitted is a man-made textile material stuff bag which measures 20" high by 8 1/2" diameter. The bag is closed by means of a drawstring closure and has a self material shoulder strap sewn on one side. You have indicated that the bag will be imported with and without a nylon waterproof coverall. The classification of the coverall has not been requested.

A nylon stuff bag is not the usual type container ordinarily sold at retail with a coverall. In fact the stuff bag retains its identity even without the garment. Whether or not the stuff bag were imported with the completed garment, they would not be considered an entirety. Each item would be separately classified.

You have also indicated your opinion that the stuff bag is significantly braided. Similar merchandise has been the subject of prior Customs decision and have been found not to be classified within the braided provision.

The stuff bag is classifiable under the provision for luggage of textile materials, other in item 706.4152, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 20 percent ad valorem.

Tariff item number 706.4152 falls within textile category designation 670. As a product of Korea, this merchandise is subject to quota and visa requirements based upon international textile trade agreements.

B7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Mr. Bradley H. Shorser
Sears Merchandise Group
Department 733-X
Sears Tower
Chicago, IL 60684

Dear Mr. Shorser:

In your letter dated September 30, 1985, you inquired about the dutiable status of an incomplete men's leather shoe from Taiwan. A sample was submitted.

The item in question consists of an all-leather, four-eyelet tie upper with a padded tongue and collar and a leather lining. It is of tubular construction, that is, a single piece of U-shaped leather forms an insole and turns up to form a part of the upper. The bottom is fully closed, with the only processing to be performed in the United States being the attachment of a sole/heel unit by cementing.

In your letter you suggest classification of this item in item 791.28, TSUS, a provision for leather cut to shape, suitable for conversion into footwear. It is your view that classification as unfinished footwear is inappropriate due to the absence of the outsole at the time of importation. You point out that in its imported condition the item is not functional as footwear.

In Daisy-Heddon Div. Victor Comptometer Corp. v. United States, CAD 1228, the court specifically rejected the essential part test for unfinished merchandise and instead substituted a series of other criteria for use in classifying incomplete merchandise. These criteria clearly favor classification of the present article as unfinished footwear. There are more included parts than omitted parts. The time and effort in sewing and shaping the leather is relatively complex and time consuming. The cost of the imported portion of the shoe must exceed the cost of domestic materials used. While the significance of the omitted parts is undeniable, the trade custom test is not relevant because the unfinished versus component argument is a purely legal issue which has no basis in the commercial reality of the footwear trade.

In addition, classification of this merchandise is governed by TD 79-100, in which Customs set forth guidelines for classifying lasted leather footwear uppers. Under these guidelines it is also clear that this item is properly classifiable as unfinished footwear, rather than as a "part". Examination of the sample shows that it has the following characteristics:

B9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(1) It has an insole or midsole;
(2) It has been formed to fit the foot;
(3) It has been advanced beyond the stage of being forms and shapes suitable for conversion into footwear;
(4) The essence or fundamental characteristic of a shoe is readily apparent;
(5) It resembles a shoe; and
(6) It provides a layer or two of protection between the foot and flooring.

Based on the foregoing, this item is classifiable under the provision for other footwear, of leather, for men, youths, and boys, in item 700.35, Tariff Schedules of the United States, and dutiable at the rate of 8.5% ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Richard Poirier, Purchasing Agent
Iroquois Chemicals Corp.
Second Street West P.O. Box 399
Cornwall, Ontario K6H5T1 Canada

Dear Mr. Poirier:

In your letter dated September 19, 1985, you inquired about the dutiable status of twelve coating products from Canada.

692 - Line (groundcoat) and 200-000 Line (C Base) are classifiable under the provision for benzenoid paints in item 408.4800, Tariff Schedules of the United States Annotated (TSUSA) and dutiable at the rate of 7 percent ad valorem.

684-000 Line (Shader), 831 Line Spray Stain and 842-000 Line (Wiping stain) are classifiable under the provision for benzenoid polyester resins, unsaturated in item 409.1000, TSUSA and dutiable at the rate of 0.7 cent per pound plus 9 percent ad valorem.

801-001 (Thinner) when imported to be used as a fuel is classified under the provision for mixtures in item 432.1000, TSUSA and dutiable at the rate of 5 percent ad valorem, but not less than the highest rate applicable to any component material. In this case no component has a higher rate. When imported to be used otherwise than as a fuel, the 801-001 (thinner) is also classifiable in item 432.1000, TSUSA. In this case the component with the highest rate is methanol which is classifiable in item 427.9700, TSUSA and dutiable at the rate of 18.4 percent ad valorem.

690-Line (Release Coat) is classifiable under the provision for Non-benzenoid paints containing titanium pigments in item 474.3500, TSUSA and dutiable at the rate of 5.6 percent ad valorem.

660-000 Line (Nitrocellulose Sealer) and 740-100 Line (Catalyzed Vinyl Sealer) are classifiable under the provision for varnishes, other in item 474.4600, TSUSA and dutiable at the rate of 1.3 percent ad valorem.

The part of your ruling request is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1].

B11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

We are unable to provide you with a classification ruling for 649-600 Line (Catalyzed topcoat) and 770-Line (Catalyzed topcoat) since you submitted incorrect samples. In addition, we cannot provide a classification ruling for 820-200 Line (Spatter stain) since you have not identified the benzenoid color used in this product. When you have obtained the correct samples and information for these products you may resubmit your classification ruling request.

If you have any questions regarding these issues you may contact National Import Specialist Cornelius Reilly of this office at telephone number (212) 466-5770.

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

This merchandise may be subject to the regulations of the Environmental Protection Agency, Office of Pesticides and Toxic Substances. You may contact them at 401 M Street, S.W., Washington, D.C., 20460, telephone number (800) 424-9086.

Sincerely,

John J. Martuge

Soltex Polymer Corporation
P.O. Box 27328
Houston, Texas 77227

Dear Mr. Ganter:

Your letter of September 25, 1985 concerns the dutiable status of Clarene from Italy. Technical literature relating to the material was submitted for our review.

Clarene is the trade-name for an ethylene-vinyl alcohol co-polymer. This product is classifiable under the provision for synthetic plastics material, vinyl resins, polyvinyl acetate and vinyl resins containing by weight 50 percent or more of derivatives of vinyl acetate, other, in item 445.4400, Tariff Schedules of the United States Annotated. The rate of duty is 4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Mr. Ned H. Marshak
Sharretts, Paley, Carter & Blauvelt, P.C.
Eighty Broad Street
New York, NY 10004

Dear Mr. Marshak:

In your letter of October 3, 1985, on behalf of your client, Amtoy, you requested the tariff classification of a "Musical Birthday Pet" from Taiwan.

The sample submitted with your inquiry is a soft plush textile representation of a bear measuring approximately 10 inches high. The article has plastic eyes and nose and a textile yarn mouth. A stuffed woven fabric cap is sewn on the top of the animal's head. Embedded within the torso is a wind-up metal music movement. The figure is fully stuffed.

The "Musical Birthday Pet" is a fully distended, amusing depiction of an animal. It is classifiable under the provision for toy figures of animate objects (except dolls), having a spring mechanism, wholly or almost wholly of metal, in item 737.4200, Tariff Schedules of the United States Annotated, and dutiable at the rate of 7.4 percent ad valorem.

Articles classifiable under item 737.4200, TSUSA, which are the products of Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Your sample is being returned as you requested.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Monmouth Junction, NJ 08852

Dear Mr. Meola:

In your letter dated October 3, 1985, you inquired abou the dutiable status of "Techster" from France.

"Techster" is a benzenoid polybutylene terephthalate thermoplastic saturated polyester resin. The product exhibits a unique combination of properties such as, high strength, rigidity and toughness and has many thermoplastic and thermoset applications. "Techster" is used in the manufacture of parts for the automotive, electrical/telecommunications, appliance and other industrial areas.

"Techster" is classifiable under the provision for benzenoid polyester saturated resins in item 408.6800, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 1.4 cents per pound plus 9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. 80 Sheridan Blvd.
Inwood, New York 11696

Dear Mr. Veny:

In your letter dated October 4, 1985, you inquired on behalf of your client Harry D. Koenig & Company, about the dutiable status of a disposable chemical handwarmer from Japan.

According to your inquiry this product contains iron powder, carbon, silicone, salt and water.

Disposable chemical handwarmers of this type are classifiable under the provision for non-enumerated products in item 799.00, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Klockner Chemical, Inc.
666 Third Avenue
New York, NY 10017

Dear Mr. Skala:

In your letter dated September 26, 1985, you inquired about the dutiable status of crude calcium chloride and bulk rock salt from either West Germany or East Germany.

According to your inquiry the calcium chloride you intend to import is produced as a by-product of the solvay process. Your question is what quality of calcium chloride is crude.

Calcium chloride that does not meet United States Pharmacopeia (USP) standards is classifiable under the provision for calcium compounds in item 418.16, Tariff Schedules of the United States, and is free of duty.

In addition to the foregoing you have requested information concerning packaged rock salt.

Rock salt also known as sodium chloride in cartons, bags, drums and sacks containing up to 2000 pounds is classifiable under the provision for sodiium chloride, other in item 420.96, Tariff Schedules of the United States, and is free of duty if imported from West Germany and dutiable at the rate of 11 cents per hundred pounds if imported from East Germany.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Suite 507, Seattle, WA 98119

Dear Mr. Tolliver:

In your letter dated September 30, 1985, you inquired about the dutiable status of Shimprin from Japan.

Shrimprin is an edible food additive used to protect shrimp from flavor and color loss during storage and from weight loss during cooking. It is composed, by weight, of the following ingredients:

Sodium Polyphosphate	33.9 per cent
Disodium Dihyrogen Pyrophosphate	7.3 per cent
Potassium Phosphate Dibasic	7.3 per cent
Sodium Chloride	16.0 per cent
Sodium Sulfate Anhydride	28.0 per cent
Peptide	1.5 per cent
Extract of Shrimp	6.0 per cent

Shrimprin is designed to be added to either fresh or salt water, in 50 gram allotments, and mixed with 1 to 2 kilograms of shrimp. The shrimp is to be refrigerated for one hour and then prepared for cooking in any manner.

There is no indication that the components of shrimprin are not of food grade quality and thus the product is edible with prepared shrimp.

Shrimprin is classifiable under the provision for other edible preparations not specially provided for (including prepared meals individually packaged). in item 183.0520, Tariff Schedules of the United States (Annotated) TSUSA, and dutiable at the rate of 10 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported.

Summit One Enterprise, Inc.
105 Catlin Circle
Greenville, South Carolina 29607

Dear Mr. Clinkscales:

In your letter of September 27, 1985, you asked about the tariff classification of an electronic message badge from Singapore.

A brochure submitted with your inquiry describes a battery-operated lighted-message badge, three inches in diameter, designed to be worn on a garment or around the neck as a pendant on a plastic neck cord.

The face of the badge has an incomplete message which is completed by a flash of light illuminating the missing parts of a slogan. For example, when the battery circuit is closed the #1 lights up to complete the message "Yes, we're #1, Summit 1 Enterprises."

The face of the badge is designed so that the message disc can be removed and an alternate message inserted, giving the user the opportunity to vary the badge as desired.

The electronic message badge is classifiable under the provision for jewelry and other objects of personal adornment, valued over 20 cents per dozen pieces or parts, in item 740.3800, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 15.1 percent ad valorem.

The battery used with the message badge is separately classifiable under the provision for primary cells and primary batteries in item 682.9500, TSUSA, and is dutiable at the rate of 6.1 percent ad valorem.

If the battery is made in the United States, it would be classifiable under the provision for products of the United States when returned after having been exported, without having been advanced in value or improved in condition... in item 800.0035, TSUSA, free of duty.

Articles classifiable under item 740.3800 and 682.9500, TSUSA, which are the products of Singapore, are entitled to duty-free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Ms. Yvonne Williams
BBC International Ltd.
350 Fifth Avenue
New York, NY 10118

Dear Ms. Williams:

In your letter dated October 9, 1985, you inquired about the dutiable status of two styles of women's casual shoes from Taiwan. Samples were submitted.

The first item, pattern TEW 202-04, is a five-eyelet tie low-cut shoe with a plastic upper and a decorative lacing around the collar. We do not consider this lacing part of the exterior surface area of the upper since it is merely a loosely attached appurtenance. This shoe has a terry/sponge lining and a cemented-on rubber outsole with a serrated mockwelt edging.

The second item, pattern TEW 484-11, is a five-eyelet tie high top shoe with an all-plastic upper, a padded collar, a tricot/sponge lining and a canvas sockliner. It has a calendered rubber outsole as well as rubber heel and toe bumpers, all of which have been vulcanized to the upper. The toe and heel bumpers do not substantially encircle the shoe and are therefore not considered to be foxing-like. The main issue on this shoe is whether the rolled-soled construction constitutes a foxing-like band.

Although pattern TEW 484-11 is produced in a rolled-sole vulcanized process, it has been made using a standard cement lasting technique in which the upper has been lasted to a stiff cardboard insole prior to sole attachment. As a result, the roll up of the sole onto the upper is very slight, resulting in a visual effect of the outer edge of the sole being visible when the shoe is viewed from the side. In other types of rolled sole shoes the pushed up calendered surface of the sole is visible in a side view of the upper.

Based on both the visual effect, which in this case does not resemble foxing, and the construction technique, which is little more than a direct substitute for cementing, we do not consider pattern TEW 484-11 to have a foxing-like band. In other rolled sole constructions the vulcanization is essential to the integrity of the shoe. It literally holds the shoe together. In this case the upper is lasted to a cardboard insole and the process, while stronger than cementing, is not as critical as it is with other rolled sole shoes.

C10

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

REPLY TO AREA DIRECTOR, NEW YORK SEAPORT, U.S. CUSTOMHOUSE, NEW YORK, NEW YORK 10048

These two shoes are classifiable under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics, and having uppers of which over 90 percent of the exterior surface area is rubber or plastics (except footwear having foxing or a foxing-like band applied or molded at the sole and overlapping the upper), in item 700.5646, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Morristown, NJ 07960-1439

Dear Mr. Grasmuck:

In your letter dated October 2, 1985, you inquired about the dutiable status of "Cantella" cheese from France. The manufacturer is Unicopa of France.

Cantella is a type of Cantal cheese that is aged for a minimum of 90 days. It has a yellow rind and a pale yellow color. There are no mechanical openings in this smooth textured cheese. Cantella is made from pasteurized cow's milk. An analysis of this cheese by our laboratory indicates there is 52.06 percent moisture in the nonfatty matter and 38.51 percent butterfat on the dry basis.

Cantella cheese is classifiable under the provision for other cheeses, and substitutes for cheeses: other, in item 117.8855, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

Cheese classifiable in item 117.8855, TSUSA, is subject to quota restrictions listed in item 950.10D in Part 3, Appendix to the Tariff Schedules. Additionally, an import license, issued to the importer by the United States Department of Agriculture, would be required at the time of entry of such merchandise.

Questions regarding licensing procedures and application for license to import cheese subject to quota should be addressed to:

Head, Dairy and Import Group
Dairy, Livestock and Poultry Division
Foreign Agricultural Service
United States Department of Agriculture
Washington, D.C. 20250

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported.

The R.T. French Co.
One Mustard Street, PO Box 23450
Rochester, N.Y. 14692

Dear Ms. Gillan:

In your letter dated October 2, 1985, you inquired about the dutiable status of Colman's Concentrated Gravy from England.

The product, Colman's Concentrated Gravy, is composed of starch, vegetable oil, hydrolized vegetable protein, animal fat, beef drippings, salt, color, onion powder, flavorings, beef extract, dextrose, emulsifier, pepper flavoring, yeast extract and an antioxidant. These ingredients have been processed into a paste-like concentrated gravy mixture. The product is packed in a 180 gram size container and is designed to be used by the retail consumer. Directions for use indicate that two or three tablespoons of the concentrated gravy are to be added to boiling water, stirred and simmmered for two minutes then served. Once reconstituted, with water, the item is a substantially finished gravy to be applied to various foodstuffs such as meats, vegetables and fish, for flavor enhancement.

Colman's Concentrated Gravy is classifiable under the provision for sauces, other than thin soy in item 182.4600, Tariff Schedules of the United States, and dutiable at the rate of 7.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Sommerville, N.J. 08876

Dear Ms. Smith:

In your letter dated October 3, 1985, you inquired about the dutiable status of Exolit 462 and Exolit 455 from West Germany.

According to your letter both of these products are flame retardant additives.

Based on this information Exolit 462 is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be melamine classifiable under item 445.35, Tariff Schedules of the United States, and dutiable at the rate of 8.6 percent ad valorem.

Exolit 455 is classifiable under the provision for mixtures, not specifically provided for in item 413.51, Tariff Schedules of the United States, and dutiable at the rate of 13.7 percent ad valorem, but not less than the highest rate applicable to any component material. No component has a higher rate.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Ottawa, Ontario, Canada K1A 0G2

Dear Mr. Tonkin:

In your letter dated October 9, 1985, you inquired about the dutiable status of Nocita-Hazelnut Spread and Smile-Peanut Spread from Canada.

The Nocita-Hazelnut spread is composed of the following ingredients:

Sugar	50 percent
Vegetable oil	16 percent
Hazelnuts	15 percent
Skim Milk Powder	5.5 percent
Concentrated Whey Protein	5 percent
Cocoa	5 percent
Wheat germ	2 percent
Vegetable oil shortening	1 percent
Mono and Diglycerides	0.23 percent
Lecithin	0.2 percent
Vanillin	0.6 percent

The Smile-Peanut spread is composed of the following ingredients:

Peanuts	38 percent
Sugar	32 percent
Vegetable oil	17.5 percent
Vegetable oil shortening	3 percent
Cocoa	2.4 percent
Skim Milk Powder	3.5 percent
Mono and Diglycerides	1 percent
Dextrose	1 percent
Artificial flavor	0.6 percent
BHA, BHT	0.001 percent

Samples of each spread were furnished and consisted of each being a 200 gram jar of a chocolate semi-viscous spread. The spreads are intended for consumption on bread, crackers or similar baked articles. These spreads are packaged in retail size jars and are intended for use in their immediate condition without further processing necessary.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The Nocita-Hazelnut spread and the Smile-Peanut spread are classifiable under the provision for other edible preparations not specially provided for in item 183.05, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

Presidential Proclamation 5340 amended Presidential Proclamation 5294 and exempted from quota articles not principally of crystalline structure or not in dry amorphous form that are prepared for marketing to the retail consumer in the identical form and package in which imported. Thus these two items would not be subject to the quota restriction for TSUS 183.05.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropr[illegible] Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. W. T. Reisen, Import Specialist
Stouffer Chemical Company
Westport, CT 06881

Dear Mr. Reisen:

In your letter of October 10, 1985, you requested the tariff classification of iso-amyl alcohol from Brazil.

Iso-amyl alcohol is classifiable under the provision for alcohols, monohydric, unsubstituted in item 427.72, Tariff Schedules of the United States, and dutiable at the rate of 8.6 percent ad valorem.

Articles classifiable under item 427.72, TSUS, which are the products of Brazil are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Raymond D. Besson
Raydor, Besson and Company, Inc.
15333 Drummet Blvd.
Houston, Texas 77032

Dear Mr. Besson:

In your letter dated September 13, 1985, you inquired about the dutiable status of Raclette and Vacherin cheeses from Switzerland. You are requesting a ruling on behalf of Orlait of Lausanne, Switzerland. Orlait is the manufacturer of the cheeses.

The Vacherin cheese (Les Chevreuils) is a cow's milk cheese that is a pale white color with white and red speckled mold on the exterior. There are small irregular openings in the cheese. Your specification sheet states this cheese has a maximum of 62 percent moisture in the nonfatty matter and a minimum of 48 percent butterfat on the dry basis. An analysis of your cheese by our laboratory indicates this cheese has 61.29 percent moisture in the nonfatty matter and 47.57 percent fat on the dry basis. The shipping specifications of this cheese are diameter 32.5 cm., height 7-8 cm., and weight 6 kg.

The Raclette cheese (Les Moulins) is a cow's milk cheese that is a pale yellow color with white and red speckled mold on the exterior. The specification sheet states this cheese has a maximum of 62 percent moisture in the nonfatty matter and a minimum of 47 percent butterfat on the dry basis. An analysis of this cheese by our laboratory indicates your cheese has 61.37 percent moisture in the nonfatty matter and 48.80 percent fat on the dry basis. The shipping specifications of this cheese are diameter 30 cm., height 6-7 cm., and weight 5 kg.

The Vacherin and Raclette cheeses are classifiable under the provision for other cheeses, and substitutes for cheeses: in item 117.8855, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

Cheeses that are classifiable in item 117.8855, TSUSA, are subject to quota restrictions listed in item 950.10D in Part 3, Appendix to the Tariff Schedules. Additionally, an import license, issued to the importer by the United States Department of Agriculture would be required at the time of entry of such merchandise.

DS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Questions regarding licensing procedures and application for license to import cheese subject to quota should be addressed to:

Head, Dairy and Import Group
Dairy, Livestock and Poultry Division
Foreign Agricultural Service
United States Department of Agriculture
Washington, D.C. 20250

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Sidney H. Kuflik
Lamb & Lerch
233 Broadway
New York, NY 10279

Dear Mr. Kuflik:

In your letter dated October 16, 1985, on behalf of Huffy Sporting Goods Division, P.O. Box 07493, Milwaukee, WI 53207, you inquired about the dutiable status of a body guard pole pad from Taiwan. Your submitted sample is being returned as you requested.

The body guard pole pad will be placed around basketball poles to prevent injury to players who either run into or are pushed against the pole. The body guard pole pad consists of a layer of high density 3½ inch foam. The bottom edge is to be positioned at knee level on the pole. The nylon cover is to be snapped in place over the foam to hold the foam in position. The snaps should be placed at the rear of the pole so that they themselves do not form a hazard to the player. The nylon cover also has drawstrings at both ends to further secure and protect the foam. This body guard pole pad shows special design for use in the sport of basketball. You believe that this pole pad is properly classifiable as sport equipment. We agree.

Accordingly, this body guard pole pad is properly classifiable under the provision for game, sport, gymnastic, athletic, or playground equipment, not specially provided for in item 735.2058, Tariff Schedules of the United States Annotated, (TSUSA) and is dutiable at the rate of 5.52 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Austin Chemical Company Inc.
8410 West Bryn Mawr Avenue
Chicago, Illinois 606331-3434

Dear Mr. Corboy:

In your letter dated October 18, 1985, you inquired about the dutiable status of dimethoxy acetyline dicarboxylate from England.

According to information contained in your inquiry this compound is derived from dibromo succinic acid de-hydrobrominated monopotassium salt.

When dimethoxy acetylene dicarboxylate is derived from dibromo succinic acid de-hydrobrominated monopotassium salt produced from non benzenoid sources, it is classifiable under the provision for esters of monohydric alcohols, other in item 428.72, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem.

When dimethoxy acetylene dicarboxylate is derived from dibromo succinic acid de-hydrobrominated monopotassium salt produced from benzenoid sources, it is classifiable in item 407.06, Tariff Schedules of the United States, and dutiable at the rate of 13.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Sidney Goldman
PIC Corporation
23 S. Essex Avenue
Orange, N.J. 07050

Dear Mr. Goldman:

In your letter dated October 14, 1985, you inquired about the dutiable status of five pesticide formulations in aerosol cans from Canada.

Pic Automatic Indoor Room Fogger, Pic Wasp and Hornet Killer, Pic Wasp and Hornet Killer II and Pic Inside/Outside Bug Killer Extra Strong are classifiable under the provision for benzenoid pesticides, other, other in item 408.3800, Tariff Schedules of the United States Annotated, and dutiable at the rate of 0.8 cent per pound plus 9.7 percent ad valorem.

However, your inquiry does not provide enough information for us to give a classification ruling on Pic Roach, Ant and Spider Killer. The submitted literature indicates that the product contains d-trans-allethrin and n-octyl-bicycloheptene dicarboximide. The d-trans allethrin and the n-octyl-bicycloheptene dicarboximide are made from products (acetone and maleic anhydride respectively) that can be derived from a benzenoid source. Your request for a classification ruling should have included a flow chart from the manufacture(s) showing how the acetone and maleic anhydride were made.

Based upon the information you submitted, Pic Roach, Ant and Spider Killer would probably be classified under the provision for benzenoid pesticides, other, other in item 408.3800, Tariff Schedules of the United States Annotated, with duty at the rate of 0.8 cent per pound plus 9.7 percent ad valorem.

With respect to Pic Automatic Indoor Room Fogger, Pic Wasp and Hornet Killer, Pic Wasp and Hornet Killer II and Pic Inside/Outside Bug Killer Extra Strong, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)]. For the balance of the merchandise, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations [19 C.F.R. 177.1(d)(2)].

Ms. Christine Scott
Manager, Operations
Seltzer Chemicals, Inc.
4990 Carroll Canyon Road
San Diego, CA 92121

Dear Ms. Scott:

In your letter dated October 22, 1985, you inquired regarding the tariff classification of gamma oryzanol produced in Japan.

The literature which you submitted indicates that this product is used as an ingredient in cosmetics. This literature also includes a statement by the foreign manufacturer indicating that the gamma oryzanol which he produces is derived naturally by extraction from rice bran oil. Gamma oryzanol is a product which can be produced either from natural sources or from synthetic benzenoid sources. The information which you submitted implies that this product is not the synthetic benzenoid variety of gamma oryzanol. The literature submitted also includes a diagram of the chemical structure of this product.

Based on the chemical structure depicted in the literature which you submitted and based on the manufacturer's statement that his variety of gamma oryzanol is derived naturally from rice bran oil, this product is classifiable under the provision for esters of monohydric alcohols and organic or inorganic acids (except hydrogen sulfide and hydrogen halide acids): other in item 428.7250, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Mr. E. A. O'Neill, Vice President
Export Import & Trading Corporation
1050 17th Street N. W.
Washington, D.C. 20036

Dear Mr. O'Neill:

In your letter dated October 21, 1985, you inquired about the dutiable status of tri-(2-ethylhexyl) phosphate and polypropylene glycol sebecate from Great Britain, West Germany or Mexico.

According to your inquiry both chemical compounds are used as plasticizers.

Tri-(2-ethylhexyl) phosphate is classifiable under the provision for esters of monohydric alcohols, other, in item 428.7290 (TSUSA), Tariff Schedules of the United States Annotated, and dutiable at the rate of 4 percent ad valorem if imported prior to December 31, 1985. If imported on January 1, 1986 or later, the duty will be 3.9 percent ad valorem.

Polypropylene glycol sebecate when produced from non benzenoid sources is classifiable under the provision for esters of polyhydric alcohols, other, in item 428.4770 (TSUSA), Tariff Schedules of the United States Annotated, and dutiable at the rate of 12.3 percent ad valorem.

Polypropylene glycol sebecate when produced from benzenoid sources is classifiable under the provision for products chiefly used as plasticizers in item 409.3450 (TSUSA), Tariff Schedules of the United States Annotated, and dutiable at the rate of 0.5 cents per pound plus 17.7 percent ad valorem if imported prior to December 31, 1985. If imported on January 1, 1986 or later, the duty will be 0.3 cents per pound plus 17.7 percent ad valorem.

Articles classifiable under item 428.7290, 428.4770 or 409.3450, TSUS, which are the products of Mexico are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Kimko International, Inc.
13608 Midway Road Suite 130
Dallas, Texas 75244

Dear Mr. Threat:

In your letter of October 24, 1985, you requested the tariff classification of tanned leather from Taiwan.

The submitted sample (measuring approximately 3 inches by 3 inches) is a tanned split bovine leather which is coated with a plastic and embossed to resemble grain leather. The leather is considered fancy because of the embossing process.

The fancy leather is classifiable under the provision for leather in the rough, partly finished, or finished fancy, in item 121.6500, Tariff Schedules of the United States, and dutiable at the rate of 3.3 percent ad valorem.

Articles classifiable under item 121.6500, TSUS, which are the products of Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Lewis Stein
Johnson & Johnson
One Johnson & Johnson Plaza
New Brunswick, NJ 08933-7002

Dear Mr. Stein:

In your letter dated October 29, 1985, you inquired about the dutiable status of a collagen absorbable hemostat (unsterilized) from West Germany.

The collagen absorbable hemostat (unsterilized) is a lyophilized bovine dermal collagen. The material, prepared as a sponge like pad, is lightly cross-linked, non-sterile, non-pyrogenic and absorbable.

After importation the product will be packaged and sterilized in 1" x 2" and 3" x 4" sizes and sold as hemostats. When collagen comes into contact with blood, platelets aggregate on the collagen and release coagulation factors which, together with plasma factors result in the formation of fibrin, and finally in the formation of a clot. The material may be left in situ whenever necessary. However, the surgeon, at his discretion, should remove any excess collagen prior to wound closure as some adverse reactions may occur if left in an infected or contaminated space.

As the collagen absorabable hemostats (unsterilized) are intended to be repackaged and sterilized for sale as hemostats (sterile), they are classifiable under item 798.0000, Tariff Schedules of the United States Annotated (TSUSA), the provision for any article, not provided for elsewhere in the tariff, most resembling as to use a particular enumerated article absorbable surgical hemostats, which are sterile in item 495.1000, TSUSA and dutiable at the rate of 4.8 percent ad valorem.

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Suite 115
Fremont, CA 94536

Dear Mr. Lahham:

In your letter dated October 17, 1985, you inquired about the dutiable status of pure "Ghee" from cow's milk from Holland.

A sample tin of this product, submitted with your inquiry, consists of a light brown, viscous paste. A laboratory analysis indicates that this "ghee" is made from milkfat. The sample label lists the ingredients as milkfat (minimum, 99.8 percent), moisture (maximum, 0.2 percent), and a flavoring agent (ethyl butyrate, 0.1 percent). "Ghee" is used as a cooking fat, primarily for frying.

This "ghee" is classifiable under the provision for "Other animal oils, fats, and greases: ...Other: ...Edible: ...Derived from milk" in item 177.6700, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

Articles classified in item 177.6700 are subject to quota import restrictions listed in item 950.06 in part 3, Appendix to the Tariff Schedules. The world-wide quota quantity permitted under item 950.06 is 1,200,000 pounds per calendar year.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Federal Republic of Germany

Gentlemen:

Your letter of October 25, 1985 requests the 1986 tariff status of two food colors, FD and C Yellow No. 5 and FD and C Yellow No.6 from Germany.

FD and C Yellow No.5 and FD and C Yellow No. 6 are classified under the provision for benzenoid acid dyes in item 409.6600, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty in effect for the calendar year 1986 will be 21.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

With regard to your questions concerning the valuation of these products as we have previously advised, the majority of imported products are appraised at Transaction Value. Transaction Value is the price actually paid (or payable) for imported merchandise exclusive of international freight, insurance and duty.

Sincerely,

John J. Martuge

Mr. Don Caplan
Imports International, Inc.
Suite 112
10420 Old Olive St. Road
St. Louis, Mo. 63141

Dear Mr. Caplan:

In your letter of October 2 received at our office on November 1, 1985, you requested a tariff classification on a child's vinyl athletic shoe which you indicate was imported from Hong Kong and produced in Mainland China.

Inspection of the sample submitted with your inquiry, your Pattern No. 12-1500-37A, indicates that this is a high cut all vinyl basketball shoe, 8 eyelet, with padded collar, perforated vamp, and a gray abraded plastic toe cap. This shoe also has a shell type unit molded sole, the sidewalls of which overlap the upper by approximately 1/4 inch. Customs T.D. 83-116 of May 23. 1983, specified that a vertical overlap of less than 1/4 inch would normally be presumed not to be a foxing-like band on unit molded footwear. However, since your sample is a U.S. child's size 9, the overlap could be less than 1/4 inch and we would still consider it a foxing-like band since the 1/4 inch standard is based on an adult size.

Therefore, your Pattern No. 12-1500-37A, is classifiable under the provision for footwear which is over 50% by weight of rubber and plastic; which is not protective against, water, oil, grease, or cold or inclement weather; which has a foxing-like band almost wholly of rubber or plastic applied or molded at the sole and overlapping the upper; and if valued for Customs purposes not over $3.00 per pair, in item 700.6400, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the rate of 48 percent ad valorem. If valued for Customs purposes over $3.00 but not over $6.50 per pair, classification would be in item 700.6700, TSUSA, dutiable at the rate of 37.5 percent ad valorem, plus 90 cents per pair.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. B. W. Hackwell, Market Research Manager
Synthetic Chemicals Ltd.
Four Ashes, Near Wolverhampton
West Midlands WV10 7BP, England

Dear Mr. Hackwell:

In your letter dated October 25, 1985, you inquired about the dutiable status of thiophen from England.

Your letter states that the thiophen that you produce and export to the United States is produced using ethylene or ethanol to C4 aliphatics to thiophen. You request that we affirm that this method of production does not produce benzenoid derived thiophen.

We agree and confirm that thiophen produced in this manner is classifiable under the provision for sulfur compounds, including thiols, sulfides, sulfoxides and sulfones, other in item 429.60, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem.

We suggest that this letter be maintained in a safe place and a copy made and submitted when ever the question of derivation is raised.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

P.O. Box 1509
York, PA 17405-1509

Dear Mr. Riley:

In your letter dated October 28, 1985, you inquired about the dutiable status of stainless steel strip from Canada.

In your inquiry, you say that you are considering the purchase of type 304L stainless steel strip from Canada. You indicated in a telephone conversation with National Import Specialist Assistant Patrick Wholey that the actual dimensions of this so-called strip are different from that shown in your letter. The correct dimensions are .015" x .430". You further indicated that this product will be imported in coils, with a cold-rolled finish. This product meets the tariff definition of flat wire as expressed in headnote 3(i), Subpart B, Part 2, Schedule 6 of the Tariff Schedules of the United States.

Stainless steel flat wire is classifiable under the provision for flat wire, of alloy iron or steel, not coated or plated with metal, over 0.01 inch in thickness in item 609.3320, Tariff Schedules of the United States, and dutiable at the rate of 7.2 percent ad valorem plus additional duties as specified in items 606.00, 606.02, 606.04 and 606.06, TSUS, as appropriate (see attached).

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Ms. Beverely L. Pevsner
Beiley and Pevsner
7600 Southwest 57th Avenue
Suite 107
Miami, Florida 33143

Dear Ms. Pevsner:

In your letter dated October 29, 1985, you inquired on behalf of BEH Chemical Corporation, about the dutiable status of a product which you state is an animal glue from Brazil.

The product which your client intends to import is said to be comprised of 44 to 58 percent animal glue (granular), 41 to 55 percent sugar, and 1 percent defoamer and preservative. Except for the addition of water before actual use, the "animal glue" will be used as imported.

You are of the opinion that the product should be classified as an animal glue in items 455.40 or 455.42, Tariff Schedules of the United States.

This provision does not contemplate preparations (glues) based upon mixtures, including animal, vegetable, casein, or fish products. TSUS 455.40-42 embraces only glues based upon proteins of animal origin, but may also include such products as deodorants, preservatives, or substances which control viscosity.

The "animal glue" does meet the tariff definition of cement, namely a substance capable of holding materials together by surface attachment, and is classifiable under the provision for cements, not specially provided for, in item 494.6040, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 2.2 percent ad valorem. The rate of duty will not change effective January 1, 1986.

It should be noted that for this product to be considered a valid commercial identity in the trade and commerce of the United States, the "animal glue" must be used in its condition as imported, except for the addition of water.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Kawasho International (U.S.A.) Inc.
299 Park Avenue
New York, N.Y. 10171

Dear Mr. Watanabe:

Your letter of October 30, 1985 concerns the dutiable status of scroll cut tinplate and scroll cut tin free steel from Japan.

Scroll cut tinplate, whether or not enameled, is classifiable under the provision for other articles of iron or steel, not coated or plated with precious metal, of tin plate in item 657.1500, Tariff Schedules of the United States. The rate of duty is 3.3 percent ad valorem.

Scroll cut tin free steel, whether or not enameled, is classifiable under the provision for other articles of iron or steel, not coated or plated with precious metal in item 657.2590, TSUS. The rate of duty is 6.7 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

28 South 2nd Street
Philadelphia, PA 19106

Dear Mr. Reynolds:

In your letter dated October 28, 1985, on behalf of your client Amspec Specialty Chemicals, you inquired about the dutiable status of various chemicals from the Netherlands. According to your letter, all the compounds are lead stabilizers.

White lead is classifiable under the provision for white lead: basic carbonate in item 473.60, Tariff Schedules of the United States, and dutiable at the rate of 0.5 percent ad valorem.

Tribasic lead sulphate and dibasic lead phosphite are classifiable under the provision for lead compounds other in item 419.04, Tariff Schedules of the United States, and dutiable at the rate of 5.5 percent ad valorem.

Dibasic lead phthalate is classifiable under the provision for benzenoid compounds in item 404.3700, Tariff Schedules of the United States Annotated, and dutiable at the rate of 20.8 percent ad valorem.

Tribasic lead maleate if not benzenoid derived, is classifiable under the provision for lead salts of organic acids in item 426.44, Tariff Schedules of the United States, and dutiable at the rate of 5.6 percent ad valorem.

Tribasic lead maleate when benzenoid derived is classifiable in item 407.06, Tariff Schedules of the United States, and dutiable at the rate of 13.5 percent ad valorem.

Lead stearate and dibasic lead stearate are classifiable under the provision for salts of fatty acid in item 490.32, Tariff Schedules of the United States, and dutiable at the rate of 4.7 percent ad valorem.

Basic lead sulphate is classifiable under the provision for white lead: basic sulfate in item 473.62, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

Mr. David W. Besuden
Automotive International Inc.
11308 Tamarco Drive
Cincinnati, OH 45242

Dear Mr. Besuden:

In your letter of November 5, 1985, you inquired about the tariff status of a product of Switzerland identified as Waxoyl Professional Pink 120-4 or Master Shield Professional Pink FL 120-4.

The product, which is an anti-rust compound, is composed of dicyclohexylamine nitrite, paraffin wax and mineral spirits.

When the dicyclohexylamine nitrite is produced from benzenoid sources this product is classified under the provision for mixtures in whole or in part of any of the products provided for in Schedule 4, Part 1, Subpart B, Tariff Schedules of United States Annotated (TSUSA), in item 407.1610. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. Based on the dicyclohexylamine nitrite content the rate of duty would be 1.7 cents per pound plus 16.8 percent ad valorem from item 407.0500, TSUSA.

When the dicyclohexylamine nitrite is produced from non-benzenoid sources this product is classified under the provision for chemical mixtures not specially provided for in item 432.1000, TSUSA. The rate of duty is 5 percent ad valorem but not less than the highest rate applicable to any component material. Based on the dicyclohexylamine nitrite content the rate of duty would be 7.9 percent ad valorem from item 425.5290 TSUSA.

These applicable rates are not scheduled to be changed on January 1, 1986.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported.

Mr. Jack Kudelka
Jamed Imports
291 Baird Court
Woodbury, NY 11797

Dear Mr. Kudelka:

In your letter dated October 25, 1985, you inquired about the dutiable status of a partially molded shoe from Switzerland. A sample was submitted.

The item in question, style Flash (592-6676T) is a five-inch high six-eyelet tie shoe with an injection-molded foot portion and contrasting color outsole. Sewn to the upper are eyelet rows, a tongue and a padded shaft which completes the upper. The interior is terry lined.

Although the upper of this item is partially of molded construction, the non-molded portion is substantial. Therefore, we consider the upper of this shoe to be of non-molded construction formed by sewing the parts together and having exposed on the outer surface a substantial portion of functional stitching.

Therefore, this item is classifiable under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with a least 10 percent by weight of rubber or plastics, having uppers of which over 90 percent of the exterior surface area is rubber or plastics (except footwear having foxing or a foxing-like band applied or molded at the sole and overlapping the upper), in item 700.56, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Bruno Julien
Delegation of the Commission of the European Communities
2100 M Street, N.W.
Suite 707
Washington, D.C. 20037

Dear Mr. Julien:

In your letter dated August 7, 1985, received by us on November 8, 1985, you inquired about the dutiable status of radicchio rosso from European Community countries. You are requesting a ruling on behalf of the European Vegetable Exporters Association.

On August 5, 1985 we sent you an information letter (number 814237). We told you that radicchio rosso would probably be classified in item 137.97 TSUS. We infer from your second letter that you would like classification consideration under the provision for "Endive, including Witloof chicory", in item 136.1000, TSUS.

Although radicchio rosso belongs to a group of root chicories, it is not commercially designated nor commonly known as an endive or as Witloof chicory. Therefore radicchio rosso is not classified in item 136.1000, TSUS.

In your second letter you indicated that radicchio rosso was previously imported from Italy and entered in item 136.1000. A review of the import records on hand indicates one shipment of radicchio rosso was entered in item 136.1000, TSUS. However, when the Import Specialist at that port of entry reviewed this shipment she classified the radicchio rosso in item 137.9775, TSUS.

Radicchio rosso is classifiable under the provision for vegetables, fresh, chilled, or frozen (but not reduced in size, nor otherwise prepared or preserved): other, in item 137.9775, Tariff Schedules of the United States, and dutiable at the rate of 25 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the

Mr. Christopher J. Loose
Managing Director
W.M.S. (International) Limited
Agriculture House
31 Trull Road
Taunton
Somerset TA1 4QQ
United Kingdom

Dear Mr. Loose:

In your letter dated October 31, 1985, on behalf of Promotions Etcetera Ltd., 718 E. 24th Street, Suite B, Chester, PA 19013, you inquired about the dutiable status of two styles of horse riding gloves from the United Kingdom. A sample of each style was submitted.

One sample is a seamless knit glove which appears to be predominantly of cotton with leather reinforcement extending from the top of the second phalanx of the index finger to the top of the second phalanx of the thumb. Another piece of leather reinforcement extends from the second phalanx of the little finger to the second phalanx of the ring finger.

The second sample is a leather glove with a vent on the palm side of the wrist. A leather strap with a velcro closure tightens the glove around the wrist. This glove is reinforced with leather between the little and ring fingers along the same portion as the knit glove. Leather reinforcement on the index finger extends from the second phalanx to the base of the index finger where the first phalanx joins the metacarpal bone.

These reinforced areas are those where the reins are properly held in horse back riding. You believe that these gloves are properly classifiable as other sports gloves because they show design for use in the sport of horseback riding. We agree.

The submitted samples are properly classifiable under the provision for boxing gloves, and other gloves, not provided for in the foregoing provisions of this subpart, specially designed for use in sports in item 735.0700, Tariff Schedules of the United States Annotated (TSUSA), and are dutiable at the rate of 5.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

F6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

For your information the samples you submitted are not legally marked for the purposes of Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304). One of each pair of gloves should be marked with a sewn in label showing the country of origin. In addition, the knit glove is subject to the marking requirements of the Textile Fiber Products Act of 1958, as amended (15 U.S.C. 70).

Sincerely,

John J. Martuge

Grimsby, Ontario, Canada L3M 4G5

Dear Ms. Czaban:

In your letter dated November 1, 1985, you inquired about the dutiable status of Janex-Safety Toilet Bowl and Urinal Cleaner from Canada.

Janex-Safety Toilet Bowl and Urinal Cleaner is advertised as a stain remover, safe to use on stainless steel, ceramic sanitary fixtures, fibre glass, and plastics. The product will be imported and sold in quart and gallon size containers (under 10 pounds each).

Janex-Safety Toilet Bowl and Urinal Cleaner is classifiable under the provision for blackings, powders, liquids, and creams for polishing and cleaning, all the foregoing in immediate containers holding not over 10 pounds each in item 493.1000, Tariff Schedules of the United States, and dutiable at the rate of 2.6 percent ad valorem.

The rate of duty for 1986 remains at 2.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Orange, NJ 07050

Dear Mr. Goldman:

In your letter dated October 14, 1985, you inquired about the dutiable status of a Zap Mouse Trap from Canada. A sample was submitted for our review.

The mouse trap is a plastic tray, three inches by four inches and one half inch deep, which is filled with a sticky adhesive component. Once the rodent "steps" onto the adhesive, it is trapped.

Classification of this product is dependent upon its component material in chief value, which is the adhesive component. The Zap Mouse Trap is classifiable under the provision for other articles, not provided for elsewhere in the tariff schedules, in item 799.0000, Tariff Schedules of the United States Annotated. The rate of duty is 4 percent ad valorem. Effective January 1, 1986, the rate of duty will be 3.9 percent ad valorem.

This ruling is being issued under the provision of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

11938 Waveland
Franklin Park, Illinois 60131

Dear Mr. Marston:

In your letter of October 25, 1985, on behalf of Lowes International Ltd. you requested the tariff classification of Musical Modules and Musical Buttons, both battery operated from Hong Kong.

The two samples are battery operated Musical Modules and Musical Buttons. They both employ an integrated circuit which produces a pre-programmed musical tune. The Musical Module has a switch which, when depressed, will actuate the module, and the Musical Button depicts a figure on its face, described as a "Fighting Irishman". When the figure is depressed it plays the cheer song for the University of Notre Dame.

The Musical Modules are classifiable under the provision for electrical articles and electrical parts of articles not specially provided for: Electrical articles using pre-programmed digital integrated circuits to produce sound... in item 688.3400, Tariff Schedules of the United States, and dutiable at the rate of 4.3 percent ad valorem.

The batteries are classifiable under the provision for primary batteries, and parts thereof... in item 682.9500, Tariff Schedules of the United States, and dutiable at the rate of 6.1 percent ad valorem.

The Musical Buttons are classifiable under the provision for other objects of personal adornment, and parts thereof: Other... in item 740.38, Tariff Schedules of the United States, and dutiable at the rate of 15.1 percent ad valorem.

Articles classifiable under items 682.95 and 688.34, TSUS, which are the products of Hong Kong are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. J.D. Collins
Imperial Oil Limited
111 St. Clair Avenue West
Toronto, Ontario, Canada M5W 1K3

Dear Mr. Collins:

In your letter dated November 4, 1985, you inquired about the dutiable status of a spent caustic solution from Canada.

According to your inquiry this product is produced as the result of using sodium hydroxide in a gas cracking process. In a latter telephone conversation with your broker, C.J. Towers & Sons, is was disclosed that the spent caustic is composed of 7-8 percent sodium hydroxide, 2½ percent sodium sulphide, 1-½ percent sodium carbonate and less than ½ percent methyl mercaptide in solution. In this instance we believe that the amount of methyl mercaptide should be considered di minimus.

Therefore the spent caustic you describe in your inquiry is classifiable under the provision for mixtures of two or more inorganic chemicals in item 423.96, Tariff Schedules of the United States, and dutiable at the rate of 1.2 percent ad valorem if imported on or before December 31, 1985. If imported after December 31, 1985 the duty will be 0.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

The Deutz-Allis Models 6240, 6250 and 6260 are classifiable under the provision for tractors suitable for agricultural use in item 692.34, Tariff Schedules of the United States, and are free of duty.

Regarding the Models 6240, 6250 and 6260, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

As soon as available, please forward descriptive brochures for the Models 6265 and 6275. Based upon the information you submitted, these models would also be classified in item 692.34, TSUS, and are free of duty.

F14

THIS DOCUMENT MAY BE RELEASED TO THE

Regarding the Models 6265 and 6275, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations [19 C.F.R. 177.1(d)(2)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

Roy L. Dewing

Mr. S.L. Sarniak
Mobay Chemical Corporation
Mobay Road
Pittsburgh, PA 15205-9741

Dear Mr. Sarniak:

In your letter dated November 1, 1985, you inquired about the dutiable status of Baylube TP FE 3017 from West Germany.

According to your inquiry, you are of the belief that the chemical compound you have requested a ruling on is classifiable as a tetrol in item 428.44. We agree that the compound is a tetrol, but it is also an ether of a polyhydric alcohol. It is our opinion that compounds which are triols and tetrols only are classifiable in that provision.

Therefore, Baylube TP FE 3017 is classifiable under the provision for ethers of a polyhydric alcohol, other:other in item 428.47, Tariff Schedules of the United States, and dutiable at the rate of 12.3 percent ad valorem. There is no change in the rate in 1986.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martugo
Area Director
New York Seaport

Mr. Robert S. Anthony
George Uhe Co., Inc.
76 Ninth Avenue
New York, NY 10011

Dear Mr. Anthony:

In your letter dated November 11, 1985, you inquired about the dutiable status of hyaluronic acid, sodium salt from Japan.

Hyaluronic acid, sodium salt, a polysaccharide, is a physiological substance that is widely distributed in the extracellular matrix of connective tissues in both animals and man, or it may be produced by fermentation. Technical literature indicates that it may be used for the control of electrolytes and water in extracellular fluids, wound healing, protection against infection, lubrication, maintenance of stable transparent fluid in the eye and as a moisturizing and thickening agent in new cosmetics.

Hyaluronic acid, sodium salt is classifiable under the provision for analogous biological products in item 437.7600, Tariff Schedules of the United States Annotated (TSUSA), and is free of duty.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

This product may be subject to the regulations of the Food and Drug Administration. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20857, telephone number (202) 443-3380.

Sincerely,

John J. Martuge

North Miami, Florida 33161

Dear Mr. Mayer:

In your letter dated November 7, 1985, you inquired about the dutiable status of a product trade-named Polylub G.M.S. from Columbia. A sample was submitted.

The analysis by our laboratory indicates that Polylub G.M.S., a white powder, is a fatty acid ester of a polyhydric alcohol, not sulfonated or sulfated. Polylub G.M.S. is classifiable under the provision for fatty substances of animal or vegetable origin: not sulfonated or sulfated: fatty-acid esters, ethers, and ether-esters of polyhydric alcohols: other, in item 465.1000, Tariff Schedules of the United States Annotated. The rate of duty is 1.2 cents per pound, plus 5.3 percent ad valorem. Effective January 1, 1986, the rate of duty will be 1.1 cents per pound, plus 4.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs office handling the transaction.

Sincerely,

John J. Martuge

North Miami, Florida 33161

Dear Mr. Mayer:

In your letter dated November 7, 1985, you inquired about the dutiable status of Polylub 70 from Columbia.

The prospective import, called Polylub 70 has been tested and reported out by the United States Customs Laboratory as an artificial mixture of petroleum and mineral waxes. You requested classification under the provision for paraffin and other petroleum waxes in item 494.2200, Tariff Schedules of the United States Annotated (TSUSA). This provision embraces only paraffin and other petroleum waxes but does not include artificial mixtures of two or more waxes.

Polylub 70 is classifiable under the provision for artificial mixtures of two or more of the foregoing waxes in item 494.3000, (TSUSA), and is free of duty.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Philippe Martin
Cancoillotte Poitrey
3251 Prospect Street
Washington, D.C. 20007

Dear Mr. Martin:

In your letter dated November 22, 1985, you inquired about the dutiable status of Cancoillotte Super Beure Spread from France.

Cancoillotte Super Beure Spread is a processed cheese food spread. The product is made from fresh cheese curds, produced by the slow, natural acidification of skim milk. After acidification, the curd is pressed, then held in heated tanks up to seven days to allow for further fermentation of the curd. The fermentation process is finally halted by cooling, at which point the curd is ready for cutting and mixing, under heat, with water, butter, salt, and emulsifier to form a smooth, cream colored, viscous paste, which is the finished product. A sample of the spread, packaged in a plastic retail tub of 250 grams (about 8.82 ounces), was found, on analysis, to contain 6.2 percent fat on an "as-is" basis (22.61 percent fat in the dry matter), 72.7 percent moisture on an "as-is" basis, and 1.4 percent salt.

Cancoillotte Super Beure Spread is classifiable under the provision for other cheeses, and substitutes for cheese in Part 4C of Schedule 1, Tariff Schedules of the United States Annotated (TSUSA). If valued not over 25 cents per pound, this product is classifiable in item 117.7555, TSUSA, and dutiable at the rate of 5 cents per pound. If valued over 25 cents per pound, Cancoillotte Super Beure Spread is classifiable in item 117.8855, TSUSA, and dutiable at the rate of 10 percent ad valorem.

Articles classified in item 117.7555 or in item 117.8855, TSUSA, are subject to quota quantity restrictions listed in item 950.10D in part 3, Appendix to the Tariff Schedules. Additionally, an import license, issued to the importer by the United States Department of Agriculture, would be required at the time of entry of such merchandise.

Questions regarding licensing procedures and application for license to import cheese subject to quota should be addressed to:

Head, Dairy and Import Group
Dairy, Livestock and Poultry Division
Foreign Agricultural Service
United States Department of Agriculture

Mr. F. A. Milo, President
Firecat Technology, Inc.
707 Continental Circle
Mt. View, CA 94040

Dear Mr. Milo:

In your letter dated November 20, 1985, you inquired about the dutiable status of Skin Shield from Ireland.

According to your letter, this product is designed to be used as a hand cream, applied to the hands prior to working with cyanoacrylate adhesives.

Based on the chemical compounds contained in the product stated in your letter, Skin Shield is classifiable under the provision for mixtures, not specifically provided for, in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be bis hydroxyethyl aminoethane sulfonic acid classifiable under item 425.52, Tariff Schedules of the United States, and dutiable at the rate of 7.9 percent ad valorem. For importations after December 31, 1985, the rate of duty for item 432.25, TSUS, will be 3.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Ms. Denise Loquercio
Elkay Industries Inc.
1333 Broadway
New York, NY 10018

Dear Ms. Loquercio:

In your letter dated November 25, 1985, you inquired about the dutiable status of a Jac-Pac from Korea.

The sample is a combination Jacket and backpack of 100 percent nylon. The "Jac Pac" is formed by sewing a full featured teardrop backpack to the back of a jacket. If the two components were separated each would retain its identity and be functional. It can be worn as a backpack with the jacket concealed in a zippered compartment or as a jacket with the backpack located on the back of the jacket. The jacket is sewn onto the first of three zippered compartments of the backpack.

The backpack measures approximately 13 inches by 11 inches and has the following features: two padded shoulder straps, a nylon carry handle, and adjustable strap at the lower rear, and three zippered compartments. The inner compartment is designed to hold the jacket, the center compartment is able to carry large items, and the outer compartments may be used to carry papers or other small articles.

The jacket has the following features: a full-front opening with a zipper closure, a drawstring hood and drawstring waist; two front pockets with flap velcro closures. A printed logo appears on the jacket and the backpack.

The article is designed to be used as a jacket and backpack. It is a combination article having two coequal functions neither of which is subordinate of the other. It is "more than" wearing apparel or luggage.

Accordingly the article is classifiable under the provision for articles not specially provided for, of textile materials, not ornamented, of man-made fibers, other in item 389.6270, Tariff Schedules of the United States, and dutiable at the rate of 8 cents per pound plus 11 percent ad valorem. The rate in 1986 will be 4 cents per pound plus 10 per cent ad valorem. There are presently no quota restraints or visa requirements for this type merchandise from Korea.

Mr. Allan J. Spilner
Manager, Trade Issues Government Relations
Rohm and Haas Company
Independence Mall West
Philadelphia, PA 19105

Dear Mr. Spilner:

In your letter dated November 18, 1985, you inquired about the dutiable status of "Duolite AP-143" from France.

"Duolite AP-143" (cholestyramine resin USP) is finely ground polyvinylbenzyltrimethyl-ammonium chloride, a synthetic (benzenoid) anion exchange resin consisting of a copolymer of styrene and divinylbenzene with quaternary groups attached. The chief use, and currently the only known use, for the "Duolite AP-143" is as a drug. The product is effective as an antihyperlipoproteinemic in binding bile salts such as cholesterol.

It is noted that many ion-exchange resins have been classified as parts of filtering or purifying equipment. However, "Duolite AP-143" is not used as a part of any equipment but rather it is used directly as a drug.

"Duolite AP-143" is classifiable under the provision for benzenoid drugs, other in item 412.7000, Tariff Schedules of the United States Annotated, and dutiable at the rate of 6.9 percent ad valorem. The rate remains the same in 1986.

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

This product may be subject to the regulations of the Food and Drug Administration. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20857, telephone number (202) 443-3380.

Sincerely,

for John J. Martuge

[redacted]

[redacted] MFG 422.4 o
June 23, 1970
002055

[redacted]

Dear [redacted]

In your letter of January 23, 1970, you asked whether the ruling of the Bureau dated July 7, 1969, concerning the classification of certain rolled steel plate applies to products which are beveled.

The products in question are not plates within the purview of Headnote 3(g), Schedule 6, Part 2B, Tariff Schedules of the United States (TSUS), because they have been rolled into a curvature and are no longer flat merchandise as required. They are angles, shapes, and sections which are defined in Headnote 3(j). The superior heading for these basic shapes and forms, by appropriate statutory language, not present in other provisions for primary merchandise, is made applicable to angles, shapes, and sections whether or not drilled, punched, or otherwise advanced. Nothwithstanding this language, certain operations or processes may remove angles, shapes, and sections from those provisions if the advancement results in the production of manufactured articles.

An example of this situation is found in a decision concerning the classification of pre-form flanges and dish tank heads for storage vessels which were made of steel plates cladded with stainless steel cut into circles and pressed so as to form hemespheres with edges fabricated to set specifications. Such merchandise for tariff purposes is treated as a completely manufactured article, classifiable under item 657.20.

In order to decide the question raised, we must determine whether beveling is an operation which requires a ruling holding that angles, shapes, and sections so processed are no longer basic shapes or forms. In their unbeveled state, use as sections in the forming of the sides of tanks is feasible. They can be bolted into place. Beveling permits an assembly by welding in lieu of bolting. Although beveling is performed after completion of rolling, it is not an operation resulting in

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____ [redacted]

A3

advancement which produces a manufactured article. In defining advancement in this context, we consider beveled and unbeveled products in a similar condition since beveling relates only to assembly by welding.

Notwithstanding this conclusion, beveled angles, shapes, and sections cannot be classified under the same provision as the merchandise, the subject of our prior ruling. They are advanced as that word is used in the applicable superior heading. Therefore, classification under item 609.80 or 609.82, TSUS, is precluded. The proper provision is item 609.84 or 609.86, TSUS. The prescribed duty is 6.5 or 9.5 percent ad valorem plus appropriate additional duties.

This decision is being circulated to all customs officers in order that the merchandise may be uniformly so classified at each port at which it may be entered.

Sincerely yours,

(Signed) Arthur P. Schifflin

Acting Director
Division of
Tariff Classification Rulings

[redacted]

Dear [redacted]

In your letter of October 17, 1972, you inquire as to the tariff status of a rechargeable "power failure light" produced in Japan.

You state that the primary use of this product is as an emergency light that goes on automatically when power fails in the home or office. It also serves as a night light when plugged into the outlet and when unplugged can be carried about as a portable hand light. The device is housed in a plastic case measuring approximately 3-1/4 by 2½ by 1-1/4 inches and in construction resembles a conventional rechargeable flashlight.

It is the opinion of the Bureau that the subject rechargeable light is classifiable as a flashlight under item 683.70, Tariff Schedules of the United States, with duty at the rate of 35 percent ad valorem.

Sincerely yours,

for the (Signed) R. X. ARNOLD
Director
Classification and Value
Division

032756

Dear [redacted]

In your letter of March 21, 1974, you requested information concerning the tariff classification of the control panel of a plate glass tempering furnace system entered April 7, 1973.

In your letter of March 4, 1974, you stated your belief that the Customs Service had indicated that the article was classifiable under item 683.95, Tariff Schedules of the United States (TSUS), but we have no record of any previous correspondence on this subject.

A report from our field office in New York shows that the subject merchandise was entered under item 683.95 at a rate of 5 percent ad valorem but liquidated under item 685.90 at a rate of 8-1/2 percent ad valorem.

The change in classification was necessary under General Headnote 10(ij) of the tariff schedules, which states that a provision for "parts" of an article covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such a part. Item 685.90, TSUS, is a specific provision for control panels and therefore constitutes a more appropriate classification for the tempering furnace control panel than item 683.95, TSUS, which covers electrical furnaces and parts.

[redacted]

Dear [redacted]

In your letters of January 13 and 19, 1977, you ask for information about the tariff status of various electrical devices used in the yarn industry. The merchandise in question is produced in Japan. Brochures and photographs have been submitted for our examination.

You refer to the following in your letters:

1. The Fray Counter Model DT-104.

2. The Twist Monitor, Model TM-501.

3. The Fiber Torsional Rigidity Analyzer.

4. The Yarn Sampling Unit, Model AYS-531.

5. The Yarn Quality Analyzer, Model FYL-500.

Descriptive literature indicates that the Fray Counter is an electrical device using a photoelectric converter to count the number of frays of a filament yarn or a spun yarn. It consists of: the F type detector for on-line detection of the frays of a filament yarn; the S type detector for detection of the frays of a spun yarn according to their length; and the counting unit connective with either of the two detectors. The determination of the number of frays in a yarn is indispensable when setting the quality of a particular yarn. The quality control is essential because frays tend to cause yarn cuts in the knitting or weaving process as well as having an effect on the appearance of the finished product.

A7

Descriptive literature indicates that the Twist Monitor is an electrical instrument designed to count the number of twist in yarn. The monitor is used for controlling the twisting process of yarns in a mill and also for research and development in a laboratory. Incorporated in the unit are two tachometers, a controller, a D.C. motor for the rotating measuring disks, an indicator for visual readings, and a recorder output. It appears that the main features of the instrument in question are that it is an analogue output for continuous readings.

According to the brochure the Fiber Torsional Rigidity Analyzer measures the torsional rigidity, torsional hysteresis, and residual torque of a fiber. The sample is gripped between the upper and lower clamps. The upper clamp is connected to the constant-speed motor which rotates the sample and gives it the twist. The lower clamp is connected to a solid cylinder suspended freely in a viscous liquid. The plastic container holding the liquid is placed coaxially to the solid cylinder and is rotated in direction opposite to the sample rotation by a variable speed motor. The control system consists of a photoelectric detector which measures the angular position of the lower clamp and a controller which regulates the speed of the variable speed motor, according to the signal from the detector. The mirror between the lower clamp and the solid cylinder is designed so that the area, of reflection is proportional to its angular position. The light projected on the mirror is reflected to the photo-cell which generates the angular signal. A twist torque diagram of the sample can be obtained automatically by this control system.

You indicate that while you do not have a brochure for the Yarn Sampling Unit, Model AYS-531, you are enclosing a brochure for an earlier model, the Automatic Yarn Supplier, which should give us an idea of what the Yarn Sampling Unit is. However, you indicate that the automatic yarn sampling Unit Model 531, picks a yarn end from several packages on a creel stand and that after knotting these yarn ends, they are wound into a package. This package of various yarns can then be tested through the various units in the system on a runthrough basis.

Schedule 7, Part 2, Subpart D, Headnote 2, Tariff Schedules of the United States (TSUS), provides in part:

> 2. For the purposes of this subpart, the provisions herein (items 712.00 to 712.99, inclusive) *** apply only to the following articles.

049401

N8

[redacted]

(a) Appliances, instruments, apparatus, or machines of kinds described in subpart C of this part or in the provisions of this subpart (subpart D) covered by items 711.00 to 711.88, inclusive,***

Accordingly, it is our opinion that the Fray Counter, Model DT-104 and the Twist Monitor, Model TM-501 described are classifiable under the provision for production or similar counters in item 711.98, TSUS, dutiable at the rate of 5 percent ad valorem.

The Fiber Torsional Rigidity Analyzer described is classifiable under the provision for electrical measuring, checking, analyzing or automatically-controlling instruments and apparatus in item 712.49, TSUS, dutiable at the rate of 10 percent ad valorem.

The Yarn Sampling unit, Model 531, described is classifiable under the provision for textile reeling or winding machines in item 670.12, TSUS, dutiable at the rate of 7 percent ad valorem.

Sincerely yours,

(Signed) R. X. ARNOLD

[redacted]

Dear [redacted]

This is in reply to your letter of May 10, 1977, concerning the tariff status of two samples of curtain fabric manufactured by [redacted] in Canada. We regret the delay in this response, however, your inquiry was inadvertantly misfiled.

Two lengths of fabric were submitted. You state that the fabric is 90 percent polyester and 10 percent acetate, and is made on a Raschel machine. Both samples are openwork fabrics with preconceived inwrought designs and constitute lace.

Fabric as represented by the submitted samples is classifiable, if imported in material lengths, under the provision for lace, in the piece or in motifs, whether or not ornamented, made on a machine other than a Leavers (including go-through) machine, a bobbinet-jacquard machine, a nottingham lace-curtain machine, in item 351.80, Tariff Schedules of the United States (TSUS), with duty at the rate of 40 percent ad valorem.

Sincerely yours,

(Signed) James W. O'Neil

[redacted]

Dear [redacted]

In your June 16, 1977 letter, you requested tariff information as to the proper classification of articles described as glass photomasks.

These photomasks consist of 4-inch squares of flat glass approximately 0.06 inch thick. These are produced by coating the glass with a metal layer and etching away the metal layer to leave lines and dots. You have stated that the sample photomask submitted is used to form the contacts to integrated circuits. You also state that these photomasks are made of either rolled or drawn glass and the surfaces are polished.

Glass which does not measure over 15/32 inch in thickness, including rolled or drawn or blown glass, subjected to etching is properly classified under item 544.18, Tariff Schedules of the United States (TSUS), if it is not drawn or blown, or is either surface ground or polished.

Glass which does not measure over 15/32 inch in thickness, including rolled, drawn, or blown glass, subjected to etching is properly classified under item 544.16, TSUS, if it is drawn or blown and is not surface ground or polished.

If as you indicate, they are drawn and polished, or rolled and polished, we are of the opinion that these glass photomasks are properly classified under item 544.18, TSUS, dutiable at 7.5 percent ad valorem. If they are drawn or blown and are not surface ground or polished, they are properly classified under item 544.16, TSUS, dutiable at 15 percent ad valorem.

Sincerely yours,

[redacted]

[redacted]

Dear [redacted]

This is in reply to your letter of November 14, 1977, concerning the tariff status of certain fabric manufactured in Turkey.

Two sample pieces of cloth were submitted. You indicate that the fabric is wholly polyester, woven, and will be used as curtains, napkins, and tablecloths. Our examination of the submitted samples reveals that they are knit man-made fiber fabrics with inwrought preconceived designs. The sample fabrics are lace.

Merchandise as represented by the submitted samples is classifiable, if imported in material lengths and if made on a machine other than a Leavers (including go-through) machine, a bobbinet-jacquard machine, or a Nottingham lace-curtain machine, in item 351.80, Tariff Schedules of the United States, with duty at the rate of 40 percent ad valorem.

If the merchandise is not being imported in material lengths or has been made on one of the above named machines, please advise us and we will rule accordingly.

The merchandise described above may be subject to international textile trade agreements. If you desire further information in this regard, it is suggested that you write directly to our Duty Assessment Division, enclosing a copy of this letter and a sample of the merchandise with your inquiry.

Sincerely yours,

(Signed) JAMES W. O'NEIL

The Honorable
Charles H. Percy
United States Senator
Room 117
600 E. Monroe Street
Springfield, Illinois 62701

Dear Senator Percy:

With your letter dated January 9, 1978, you enclosed correspondence from [redacted] addressed to [redacted], concerning duties assessed on luggage nets manufactured in West Germany.

The luggage nets involved consist of "U" shaped pieces of metal measuring approximately 8 inches long. The arms of the "U" portions extend 5 inches upward and netting of man-made fibers is stretched across the metal frames forming pouches which are open at the top. Plastic clips or holders are used to attach the metal frames to the backs of automobile seats. These luggage nets are in chief value of man-made fibers.

[redacted] claims that the luggage nets are classifiable under the provision for other parts of motor vehicles, in item 692.27, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 4 percent ad valorem.

The District Director at the Port of Chicago classified this merchandise under the provision for other net articles, not specially provided for, of textile materials, in item 386.08, TSUS, with duty at the rate of 25 percent ad valorem. The rationale for this classification was that the luggage nets are accessories rather than parts of automobiles.

It is a fundamental principle of Customs law that an article is an accessory if its use is casual, auxiliary or optional. See Herbert G. Schwartz, DBA Ski Imports v. United States, 57 C.C.P.A. 19, C.A.D. 971 (1969), copy enclosed. It is our view that the use of these luggage nets in automobiles is optional and therefore they were properly classified at the Port of Chicago.

DEPARTMENT OF THE TREASURY · U. S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73) (Previous editions may be used)

JAN 28 1981

CLA-2:CO:R:CV:G
055902 EM

District Director of Customs
U.S. Customs Service
P.O. Box 9516
El Paso, Texas 79985

Dear Sir:

This concerns your request under the internal advice procedure (No. 181/80), on behalf of the importer, [redacted] and its agent, Customs Consultant Mr. Adolfo Loera, concerning the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain metal cans and covers exported to Mexico for use in the assembly of electronic noise filters.

055902

ISSUE:

Assuming that item 807.00, TSUS, remains applicable on the merits of assembling other components making up the described filters, the only issue for determination herein is whether the punching of holes in the cans for eyelets and screws, and the trimming of covers for certain model cans are operations considered incidental to the assembly process.

FACTS:

As stated by the importer in its request for a ruling on the drilling of holes in different locations on the metal cans, the following operations are listed as part of the assembly operation:

1) Can punched and eyeletted, insulated wire fed thru the holes.

2) Can punched and screws inserted through the holes for screw terminals.

3) Can punched and terminals eyeletted to the can.

In addition to the described hole-drilling operations, the importer also claims the trimming of metal covers used in certain

B1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

filter models to be incidental to the main assembly process. In the request for internal advice, it is stated that the assembly descriptions previously filed by the importer showed that prior to 1975, holes were punched in the cans before exportation.

CONTENTIONS:

The importer claims that the holes cannot be punched in the cans before exportation but must be punched abroad as an incident to assembly. It is claimed in the request for internal advice that the holes must be punched before exportation since making holes in the cans amounts to a substantial change not considered incidental to the assembly.

LAW AND ANALYSIS:

It has previously been the practice to preclude tariff treatment under item 807.00, TSUS, whenever holes were made in exported components. However, in Rudolph Miles v. United States, C.A.D. 1202, it was held that burning slots and drilling holes in steel Z-beams to permit proper alignment for assembly did not produce such a substantial change in the beams as to constitute further fabrication. The foreign processing of the beams was held to be a part of the assembly under item 807.00, TSUS. In view of this precedent, we are now of the opinion that similar holes made in components to facilitate assembly may also be regarded as assembly operations. In this respect, since the holes are drilled in the metal cans at the time of assembly in order to determine the location of the holes, as claimed by the importer, this drilling of holes should also be regarded as not so substantial as to constitute a fabrication.

055902

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B2

Accordingly, since the holes in question are made solely to accommodate eyelets and screws essential to the assembly of the components, punching holes will not preclude tariff treatment of the cans under item 807.00, TSUS. Slight trimming of the metal covers, of course, is also considered a step incidental to the assembly process and eligible for item 807.00 tariff relief.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

[redacted]

Dear [redacted]

Your letter of December 13, 1977, requests a reconsideration of our tariff classification ruling of November 28, 1977, control No. 053812 JB, in which flat steel plate with beveled edges was held classifiable as articles of iron or steel, not coated or plated with precious metal, under item 657.20, Tariff Schedules of the United States (TSUS), dutiable at the rate of 9.5 percent ad valorem.

You state that beveled plate is still in its basic shape and form i.e., it is still a plate, rectangular in shape. You also state that item 608.84, TSUS, recognizes that plates from a steel mill must be cut to a specified rectangular size. In cutting, a mill may cut a square or beveled edge. The beveling does not, in your opinion advance the plate material past the plate description permitted under Headnote 1, Schedule 6, Part 2, TSUS, or from the description under item 608.84, TSUS.

However, item 608.84, TSUS, does not recognize that plates from a steel mill must be cut. That item deals with plates and sheets which are not cut to non-rectangular shape. Nowhere is it said that the plate itself must be cut.

Schedule 6, Part 2, TSUS, applies to base metals, their alloys and basic shapes and forms by whatever process made and whether or not such products have been subjected to treatment, to improve the properties or appearance of the metals or to protect them against rusting, corrosion or other deterioration. Beveling permits the sheet to be used in welding and is therefore considered to be an advancement. It is a process which does more than improve the properties or appearance of the metal. Beveling is therefore not a permitted operation under Headnote 1,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B4

[redacted]

Schedule 6, Part 2, TSUS, and any classification under that Part would be precluded. Beveled plate would be classifiable as articles of iron or steel, not coated or plated with precious metal, under item 657.20, TSUS, dutiable at the rate of 9.5 percent ad valorem.

Sincerely yours,

(signed) L. P. SCHLEYER

[redacted]

[redacted]

Dear [redacted]

Your inquiry of February 6, 1978, on the behalf of [redacted], requested the tariff classification of an "Ayrbug" wheeled conversion kit for snowmobiles. The conversion kit is manufactured in Canada.

The kit is designed to convert a conventional snowmobile to an all-terrain type vehicle by removing the skis and track and replacing them with four wheels. The "Ayrbug" is shipped as a complete kit.

The conversion kit would be classifiable as parts of motor vehicles: other, under item 692.27, Tariff Schedules of the United States (TSUS), dutiable at the rate of 4 percent ad valorem. If the conversion kit is a Canadian article and original motor vehicle equipment as defined in Headnote 2, Schedule 6, Part 6, Subpart B, then it would be classifiable under item 692.28, TSUS, and be entitled to entry free of duty.

Sincerely yours,

(Signed) A. P. Scutchfield

056266

[redacted]

Dear [redacted]

Your inquiry of February 10, 1978, requested that we again reconsider our prior rulings of November 28, 1977, Control No. 053812 JB, and January 24, 1978, Control No. 056113 JB, in which we held flat plate steel with beveled edges to be classifiable as articles of iron or steel, not coated or plated with precious metal, under item 657.20, Tariff Schedules of the United States (TSUS), dutiable at the rate of 9.5 percent ad valorem.

We have again reconsidered our position and conclude that beveling is an advancement that removes steel plate from the classification as a basic shape or form. It is a process that does more than improve the properties or appearance of the metal. Therefore it is Customs' view that beveling is not a permitted operation under Headnote 1, Schedule 6, Part 2, TSUS. Therefore beveled plate would remain classifiable under item 657.20, TSUS.

Sincerely yours,

For (Signed Arthur P. Schifflin

Classification: Model Coach;
item 737.15, TSUS

LEGAL DETERMINATION 3611-239

MAR 02 1978

REFER-TO
CLA-2:R:CV:MA
056319 LXL

Dear

In your letter February 17, 1978, you inquire as to the tariff status of a model coach produced in England.

According to the submitted literature the "The Jubilee Coach" is modelled on the Queen's State Coach which was originally built in 1762. The coach is approximately 3 inches long by 1 1/2 inches high by 1 1/2 inches wide, and made of 0.925 silver and gold plated. You state that the coach is made to a scale of 1 to 95, but no evidence on the size or appearance of the actual coach was submitted.

You suggest that the coach is classifiable as a model of a highway vehicle under item 737.07, Tariff Schedules of the United States (TSUS). The Customs Court in Associated Hobby Manufacturers, Inc. v. United States C.D. 4103 (1970), defined 'highway vehicles' as limited to those vehicles whose main purpose is highway transportation -- i.e, transporting people and material over a highway from one location to another The case dealt with models of construction vehicles that could travel on highway under their own power to enable them to get to construction sites. From the foregoing case it is apparent that the "highway vehicle" must be of the type usually used on the highway for transporting people or material and the use contemplated is not a fugitive use or an unusual use.

The actual coach here under consideration is used only on festive occasions and is not currently a normal mode of transportation. It is not the type of 'highway vehicle' contemplated within the provisions of item 737.07, TSUS, which is limited specifically to the items named in the provision.

The coach is a model and as such, it is classifiable under the provision for other model articles in item 737.15, TSUS, and is dutiable at the rate of 17.5 percent ad valorem.

Sincerely yours,
(Signed) A. P. SCHIFFLER

[redacted]

Dear [redacted]

In your letter of October 24, 1978, you inquired as to the tariff status of beveled steel plate. Please note and in the future comply with the requirements listed in the enclosed sheet entitled, "Customs Duty Rulings on Prospective Imports," and also Part 177 of the Customs Regulations of which, pertinent portions are enclosed.

Furthermore, on November 2, 1978, we were assured by you via telephone that a more detailed description of the product and its use would be submitted. In absence of all of the foregoing, we will not offer definite advice.

However, in this case, the bevelling appears to fill a commercial need and constitutes an advancement. In the past, we have held that similar beveled steel plate is classifiable under the provision for articles of iron or steel, not coated or plated with precious metal, in item 657.25, Tariff Schedules of the United States (TSUS) and is dutiable at the rate of 9.5 percent ad valorem.

Sincerely,

DEPARTMENT OF THE TREASURY · U S CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

Classification: Miniat...s of
Victorian Furniture; item 737.15, TSUS

LEGAL DETERMINATION 3611-273

REFER TO
CLA-2:R:CV:MA
058142 LXL

April 5, 1978

Dear

In your letter you requested information as to the proper classification of miniatures of Victorian furniture which are used in doll houses. Your letter indicates that they are made by A.

In your letter and brief, you contend that these miniatures are properly classified under either 765.15, Tariff Schedules of the United States (TSUS), or item 765.25, TSUS, Alternatively you contend that they are properly classified under item 207.00, TSUS.

For an article to be classified under item 765.15, TSUS, it must be an original, made by a professional, and be a sculpture, or one of the first nine castings, replicas, or reproductions made from the sculptor's original work or model. For an article to be properly classified under item 765.25, TSUS, it must be an original made by a professional, rather than a skilled craftsman. Additionally, the article must be of such high quality and artistic merit as to be recognized as an example of the free fine arts by recognized art authorities.

A standard used to determine whether the creator of a work is a professional sculptor rather than a skilled craftsman is (1) that he be a graduate of a course in sculpture at a recognized school of art (free fine art, not industrial art), or (2) that he be recognized in art circles as a professional sculptor by the acceptance of his works in public exhibitions limited to the free fine arts. See C.I.E. 160/56,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B10

While A's letter and the sample indicate the painstaking attention to detail that is needed to make these miniatures, there is no evidence to indicate that he is a professional. Moreover, the articles do not appear to be examples of the free fine arts. Thus, we are of the opinion that they are not properly classified under items 765.15 or 765.25, TSUS.

We cannot agree to your alternative contention that the articles are classifiable as manufactures of wood in item 207.00, TSUS, inasmuch as the articles are provided for specifically elsewhere in the tariff schedules.

Models are defined as replicas of existing objects. We take notice that the articles are replicas manufactured on a scale of 1 to 12 of actual articles in existence. We note for example, that the piano, article No. 101 in the catalog, is a copy of the Babcock styled piano in the John Paul Jones house in Portsmouth, New Hampshire (circa 1820) and that the Lincoln rocker is a duplicate in miniature of the chair Lincoln sat in the night of his assassination. The articles meet the definition of models.

We invite your attention to headnote 1, Subpart E, Part 5, Schedule 7, of TSUS, which states, "The articles described in the provisions of this subpart (except parts) shall be classified in such provisions, whether or not such articles are more specifically provided for elsewhere in the tariff schedules, ...". Models are described in item 737.15, TSUS, which is in the aforementioned subpart. For this reason we must conclude that the replicas are classifiable under the provision for other models in item 737.15, TSUS, and are dutiable at the rate of 17.5 percent ad valorem.

Sincerely yours,

(Signed) L. F. SCHWARZ

for Salvatore E. Cafamagno

22 AUG 1979

CLA-2:R:CV:MC
060572 CM

060572

This ruling is in regard to the classification of crabmeat from Mexico.

ISSUE:

The tariff classification of crabmeat.

FACTS:

The merchandise is described as crabmeat which is made from live crabs exported from Brownsville, Texas, to Mexico where they are processed into crabmeat. The yield for this industry is on the basis of 15 pounds per 100 pounds of live crab. The recognized percentage of production is as follows:

Jumbo lump	25%	3.6 lbs.
Regular lump	9%	1.35 lbs.
Special	51%	7.65 lbs.
Claw Meat	9%	1.35 lbs.
Cocktail Claw	7%	1.05 lbs.

If the cocktail claw is not produced, the claw meat is increased to 16 percent. The various yields may fluctuate slightly; but, as indicated, the reported yield is substantially reliable.

B12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

060572

LAW AND ANALYSIS:

The merchandise is processed into a new and different article of commerce and therefore not eligible for the provisions of item 806.20, Tariff Schedules of the United States (TSUS). Further, item 806.20, TSUS, does not pertain to food items processed in a foreign country. The merchandise under consideration is crabmeat which is specifically provided for in the tariff schedules.

HOLDING:

Crabmeat, fresh, chilled, or frozen, is classifiable under item 114.15, TSUS, dutiable at the rate of 7.5 percent ad valorem. If prepared but not in airtight containers it is dutiable at the rate of 7.5 percent ad valorem under item 114.25, TSUS. If prepared or preserved and in airtight containers it is classifiable under item 114.20, TSUS, dutiable at the rate of 11 percent ad valorem.

[redacted]

Dear [redacted]

We have your letter of June 4, 1979, in which you have resubmitted your request for the tariff status of certain plastic housings. The letter contains the statement required by Section 177.2(B)(5), Customs Regulations.

The housing in question is in two parts; the larger top portion is wholly of plastic while the bottom plastic plate has either two or four metal terminal screws.

If the item is of a type chiefly used to house either a transformer or rectifying apparatus, it is classifiable under the provision for parts of transformers, rectifiers and rectifying apparatus, in item 682.60, Tariff Schedules of the United States, dutiable at the rate of 7½ percent ad valorem.

Sincerely,

(Signed) R. X. ARNOLD

692.27

SEP 2 5 1979

CLA-2:R:CV:MSP
063314 FJD

063314

[redacted]

Dear [redacted]

In your letter of August 9, 1979, you inquire as to the tariff status of a subassembly of an automotive restraint system assembled in Mexico with the use of American made components, and the applicability of item 807.00, Tariff Schedules of the United States (TSUS).

In an abstract of a Treasury decision published as T.D. 67-199(14), it was held that seat belts of the type currently required by law, designed to hold a rider in place by means of a buckled strap fastened over the lap or across the chest and lap, generally anchored to the floor or chassis of the vehicle and, in some instances, at a third point located on the upper portion of the door post, were classifiable under the provision for parts of motor vehicles, in item 692.27, TSUS. Following the principle of this decision the subject buckle half of a lap belt would be classifiable under item 692.27, TSUS, and dutiable at the rate of 4 percent ad valorem.

Item 807.00, TSUS, provides for a partial exemption from duty for articles assembled abroad in whole or in part of fabricated components of United States origin which were exported in a condition ready to be assembled without further fabrication, have not lost their physical identity in such articles by change in form, shape, or otherwise, and which have not been advanced in value or improved in condition abroad except by being assembled and except by operations incidental to the assembly process, such as cleaning, lubricating, or painting. Under this provision there would be a duty upon the full value of the imported article, less the cost or value of such components.

You state that the off line operation for the buckle assembly requires four steps, namely:

C1

41188

063314

1. sticking decal to button with machine;
2. place spring, pawl and base in buckle by hand;
3. push decal and button assembly into base slots; and
4. snap buckle cover into position.

Also, the webbing is cut either with an automatic cutter or by hand to the proper lengths.

A label is printed with necessary information and cut to proper size.

A carton is sealed with tape.

The line operation involves seven steps:

1. thread swivel on one end of cut web;
2. thread buckle on the other end of cut web;
3. position buckle and swivel;
4. fold webbing over on both ends and sew using universal pattern;
5. sew label on the swivel end;
6. inspect, fold, put belt in plastic bag; and
7. pack carton, seal box and label.

We are of the opinion that the exported articles are designed to be fitted or joined with other components in an assembly process. The printing of a label, as indicated in the off line operation, is incidental to assembly, concomitant with and closely related to the assembly process, and is of such a minor nature as to leave no doubt that it is merely incidental to the main assembly. Also, the cutting to length of such component materials as webbing and thread is regarded as an operation incidental to the assembly. Therefore, allowance may be made for the exported domestic components under item 807.00, TSUS, upon compliance with the Customs Regulations.

Sincerely,

(Signed) R. X. ARNOLD

for the Salvatore E. Caramagno
Director
Classification and Value Division

SURNAME [redacted]							

DEPARTMENT OF THE TREASURY - U. S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

CLA-2:RRUCSC
063601 EM

APR 1 8 1980

063601

[redacted]

Dear [redacted]

In your letter of February 19, 1980, on behalf of [redacted], you asked about the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to hot steel bands that would be exported to the Republic of Korea for processing and returned to the United States for sale and further processing into steel sheet for final use and application in the automotive and appliance industries.

You explained that hot steel bands would be exported and processed into cold rolled steel coils by means of annealing, stretching, smoothing, and cold rolling. Thus, the exported hot band steel will be converted into cold rolled steel bands or coils, a semi-finished product. Upon importation into the United States, the cold rolled steel will be sold to industrial users for further processing into steel sheets by slitting, cutting, or shearing. This sheet steel will be further processed into parts for use in automobiles, table tops, toasters, etc.

In conjunction with the cold rolling process performed abroad, a certain portion of lesser quality ~~of~~ steel will be produced in the form of steel pipe which will also be returned to the United States for use in such applications as welding, threading, cutting, or coupling, etc.

With respect to exported metals, item 806.30, TSUS, provides that any article of metal (except precious metal) manufactured in the United States, if exported for further processing outside the United States, is returned to the United States for further processing, may be entered with duty on the cost or value of the processing abroad upon compliance with Customs regulations.

C3

In order to meet the requirements of "further processing," some operations must be applied to the metal articles that will change their shape or form or impart new and different characteristics, which become an integral part of the metal itself. In this respect, the foreign processing of the exported hot band steel into cold rolled coils would appear to qualify the cold rolled steel with the foreign segment of item 806.30, TSUS. Also, the decribed operations of cuttng or shearing the cold rolled steel as a preparation for final fabrication and use, might also appear to constitute a sufficient compliance with the requirements of the tariff provision.

In this repect, in the absence of further defining the processing performed on the imported steel pipe, other than the sketchy description of stating that it would be used in such applications as welding, threading, etc., we are unable to state definitely whether such operations comply with the term "further processing," as required by the statute.

Further, with respect to the final processing being carried out after sale to customers, the district or area director of Customs must determine whether the requisite intent existed as the time of exportation, namely, that the metal would be returned to the United States for further processing in the manner and for the uses described. The mere expectation that the exported metal would be further processed by a customer in the undetermined future leaves open the speculation that such further processing might never take place in the United States.

As an insurance against this and to comply with the statute, it is suggested that before the hot steel band is exported from the United States, the exporter communicate with Customs officers at the port where the merchandise will be exported from or entered into, for the procedures to follow and the proof they will require.

Sincerely,

(Signed) R. X. ARNOLD

CLA-2:FRUCGC
064464 PB

[redacted]

Dear [redacted]

This is in response to your letter of February 11, 1980, requesting a binding ruling on the tariff classification of American made truck bodies mounted on Canadian made chassis.

General Headnote 3(e)(ii), Tariff Schedules of the United States (TSUS), defines the term "Canadian article" for tariff purposes. The described body/chassis assemblies would fall within the scope of that definition, assuming that materials that are of other than Canadian or United States origin used in manufacturing the chassis do not account for more than 50 percent of the appraised value of body/chassis assembly.

Your inquiry gives no value breakdown for these assemblies, but assuming that they are valued in excess of $1,000, they would be classifiable under the provision for automobile trucks valued at $1,000 or more, Canadian articles, in item 692.03, TSUS, enterable free of duty.

As to the entry documentation required, we refer you to the District Director's letter of January 31, 1980.

Sincerely,

(Signed) A. P. SCHIFFLIN

DEPARTMENT OF THE TREASURY · U. S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)
(Previous editions may be used)

APR 15 1982

CLA-2:CO:R:CV:S
067433 SC

Dear Sir:

This ruling concerns your request for Internal Advice No. 80/81 on the tariff classification of certain remote control transmitters for television receivers.

FACTS:

One model remote control transmitter operates by ultrasonic transmission and the other by infra-red transmission. Both transmitters, battery-operated, are used to control television receivers from a remote position. Essentially, in operation, the ultrasonic transmitter uses piezo electric crystal components to transmit coded signals at various ultrasonic levels for the purpose of on/off, volume, and channel selection control. The signals are transmitted to a specially matched receiver in the television set. In turn this receiver is connected to the television power supply for on/off, the variable resistor for volume, and the tuner for channel selection control. The infra-red transmitter operates on the same principle but uses light transmission instead of sound transmission.

The importer urges that the subject merchandise should be classifiable as parts of television receivers under item 685.18, Tariff Schedules of the United States (TSUS), claiming that an established and uniform practice exists.

ISSUE:

Whether the merchandise in question is classifiable as parts of television receivers or apparatus under items 685.18, or 685.19, TSUS, or as a control panel under item 685.90, TSUS, or under some other provision of the tariff schedules.

067433

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

LAW AND ANALYSIS:

Item 685.18, TSUS, provides for parts of television receivers, whereas item 685.19, TSUS, provides for other television apparatus and parts thereof.

Item 685.90, TSUS, provides in part for electrical switches, * * * and other electrical apparatus for making or breaking electrical circuits, * * * and control panels.

The transmitters in question allow one the convenience of by-passing the manual controls of a television receiver thereby causing it to operate from a distant position. The absence of the transmitters does not mean that the television receivers are incomplete. No information before this office suggests that the television receivers will not function for their intended purpose without the remote control transmitters.

In a letter 033226, dated May 8, 1974, we concluded that a non-battery-operated remote control device using mechanical energy for controlling television receivers was classifiable under the provision for television apparatus in item 685.20, TSUS. The remote control transmitters in the instant case are similar except that they either operate by infra-red or ultrasonic transmission and require the use of batteries.

Information before this office indicates that the merchandise in question is designed for and used exclusively with television sets, and that it has no other use. While the subject transmitters may have a number of buttons on their faces with each button controlling a different function, they are not commonly or commercially known as control panels. Nor do we have any evidence that the merchandise is ever bought and sold as such.

067433

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C1

Accordingly, it is our opinion that the remote control transmitters described are classifiable under the provision for television apparatus in item 685.19, TSUS, dutiable at the current column one rate of 4.5 percent ad valorem.

Sincerely,

(Signed) Harvey B. Fox

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

MAR 07 1983

REFER TO
CLA-2:CO:R:CV:S
071201 EM

Dear [redacted]

In your letter of February 16, 1983, you asked for information about the tariff status of natural whole shelled almonds that would be exported to Mexico for certain defined operations to be performed thereon and returned to the United States.

In the first of two situations, you explained that shelled almonds mixed with shells, and broken and split almonds, would all be exported in bulk to Mexico where they would be sorted and repacked in American containers and returned to the United States without change in the natural condition of the almonds.

With respect to this described product, item 800.00, Tariff Schedules of the United States (TSUS), allows products of the United States when returned after having been exported without having been advanced in value or improved in condition by any process of manufacture or other means while abroad, to be entered free of duty. The test specified in item 800.00 cases is whether the merchandise of American origin has itself been the object of an advance in value or improvement in condition while abroad, or, absent some alteration or change in the articles themselves, the mere sorting and packing of goods are not sufficient to preclude the merchandise from being classified as American good returned under item 800.00, TSUS.

071201

In this view, since the product exported to Mexico is merely sorted and repacked for return shipment, it may be entitled to free entry as American goods returned under item 800.00, TSUS, upon compliance with the regulations.

In the second situation described, whole shelled almonds, mixed with shells, and broken and split almonds, will be exported in bulk. In Mexico, the product will be sorted, fried, roast flavored, sugar coated, and packaged in American containers for return to the United States. However, the cumulative processes performed in Mexico of sorting, frying, roast flavoring, and sugar coating, would clearly advance the exported almonds in value or condition and preclude their free entry under item 800.00, TSUS.

Further, in the absence of any other exemption or partial exemption that might apply in the given circumstances, the returned almonds that are fried, roast flavored, and sugar coated abroad, would be subject to duty on total value and quantity under the appropriate provisions of the tariff schedules.

c9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

With respect to classification under the tariff schedules, shelled almonds are classifiable under item 145.40, TSUS, with duty at the rate of 16.5 cents per pound. However, shelled almonds that are blanched or otherwise prepared or preserved are classifiable under item 145.41, TSUS, with duty at the rate of 18.5 cents per pound.

Sincerely,

Russell Arnold

Russell Arnold
Chief, Special
Classification Branch

U.S. CUSTOMS SERVICE

WASHINGTON

DEC 27 1985

REFER TO
CLA-2 CO:R:CV:V
071264 KP

Ms. Angela DeGaetano
Chief, Customs Information Exchange
U.S. Customs Service
New York Region
6 World Trade Center
New York, New York 10048

Dear Ms. DeGaetano:

This is with reference to your memorandum dated June 24, 1982, wherein you advised us of a difference of opinion concerning the classification of metal oxide varistors manufactured by Ecco Ltd. in Ireland which were entered in the Buffalo District on Entry No. 110219, dated November 15, 1978. This difference is listed on page 2 of CIE N-89/79, Supplement No. 43, dated August 1985.

ISSUE:

Are zinc oxide varistors properly classifiable in the 1978 Tariff Schedules of the United States (TSUS) under the provision for other electrical apparatus for the protection of electrical circuits in item 685.90, under the provision for fixed or variable resistors in item 686.10, or under the provision for transistors and other related electronic crystal components, other, in item 687.60?

FACTS:

The subject articles are identified by the importer as zinc oxide varistors. A varistor is an electrical device that has been characterized by various technical authorities as follows:

(1) A two-electrode semiconductor device having a voltage-dependent, nonlinear resistance. Van Nostrand's Scientific Encyclopedia 1932 (4th ed. 1968).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C11

(2) Any variable resistor whose resistance depends upon voltage, current, or polarity. All semiconducting diodes are varistors. 14 McGraw-Hill Encyclopedia of Science and Technology 312 (4th ed. 1977).

(3) A semiconductor...[having] a resistance that goes down, or is inversely proportional, with voltage. Electronics One-Seven 4-27 (H. Mileaf ed. 1967).

(4) The term varistor has been used to denote the entire class of variable or nonlinear resistors composed of semiconducting materials. The Encyclopedia of Electronics 911 (C. Susskind ed. 1962).

Although these descriptions vary somewhat, they all agree that varistors are devices which provide a resistance, and that at least some, if not all, varistors are composed of semiconductor materials.

The subject varistors are composed of the semiconductor material zinc oxide, a substance whose structure is polycrystalline in nature. Polycrystalline materials consist of many tiny single crystals, or grains, separated by grain boundaries, which are described as "[r]egions of intersection of two perfect but orientationally mismatched crystallites. In this region, the atomic arrangements deviate from a perfect periodic lattice." McGraw-Hill Encyclopedia of Electronics and Computers 381 (S. Parker ed. 1984). These grain boundaries "largely control the electronic properties of polycrystalline materials...." Id.

Many references indicate that varistors are used for transient protection in electrical circuits. The importer indicates that varistors are also used as voltage regulators, electrical noise filters, and switching devices.

LAW AND ANALYSIS:

Three provisions of the 1978 TSUS have been suggested as the proper classification for the zinc oxide varistors. They read as follows:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

012264

685.90 Electrical switches, relays, fuses, lightning arresters, plugs, receptacles, lamp sockets, terminals, terminal strips, junction boxes and other electrical apparatus for making or breaking electrical circuits, for the protection of electrical circuits, or for making connections to or in electrical circuits; switchboards (except telephone switchboards) and control panels; all the foregoing and parts thereof.....

* * *

686.10 Resistors, fixed or variable (including potentiometers, but not including heating elements), and parts thereof .....

* * *

Electronic tubes (except X-ray tubes); photocells; transistors and other related electronic crystal components; mounted piezo-electric crystals; all the foregoing and parts thereof:

* * *

687.60 Other.....

The importer claims that the varistors should be classified under the provision for transistors and other related electronic crystal components, other, in item 687.60. Noting that transistors and the zinc oxide varistors are both considered semiconductors, the importer points out a number of attributes that the devices consequently share, and concludes that these similarities are sufficient to bring the varistors within the meaning of the proposed tariff provision.

We disagree with this analysis. Had there been an intent to include all semiconductors within item 687.60, we believe the term "semiconductor" would have been written into the statute as it was when the current provision for parts of semiconductors in item 687.85, TSUS, was added to the schedules pursuant to Presidential Proclamation 4889, dated December 29, 1981. The continued coexistence of those two provisions in the current

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

071264

C13

TSUS implies that the phrases "transistors and other related electronic crystal components" and "semiconductors" refer to nonidentical classes of merchandise for tariff purposes.

As noted above, the zinc oxide varistors are composed of polycrystalline material, which consists of many crystals separated by grain boundaries that greatly control the electronic properties of the material. In fact, it is the grain boundaries that give varistors their voltage-dependent resistance. McGraw-Hill Encyclopedia of Electronics and Computers, supra at 383. However, item 687.60 provides for transistors and other related electronic crystal components, and in science and technology, the term "crystal" usually denotes a single crystal. 3 McGraw-Hill Encyclopedia of Science and Technology 632 (4th ed. 1977).

In contrast to the subject varistors, transistors are generally composed of monocrystalline (single crystal) material which, by definition, cannot contain grain boundaries. Indeed, it is the very presence of grain boundaries in polycrystalline material which makes it unsuitable for use in transistors. As explained in McGraw-Hill Encyclopedia of Electronics and Computers, supra at 382-383:

> The accumulation of majority carriers at semiconductor grain boundaries has been verified in a variety of materials, including silicon (Si), germanium (Ge), gallium arsenide (GaAs), cadmium sulfide (CdS), lead sulfide (PbS), and zinc oxide (ZnO). This charging effect has a profound influence on the electrical properties of polycrystalline semiconductors. In order for current to flow across such charged boundaries, the carriers must have an energy considerably in excess of their normal thermal energy (0.025 eV at room temperature). The number of electrons having this extra energy at any time is small, and hence the conductance such a pontential barrier has when current flows across it is low and strongly temperature-dependent. The temperature dependence frequently seen is an exponential function of inverse absolute temperature — much like the leakage current across a pn junction device. Because of the small magnitude of this grain boundary

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

071264

C14

> conductance, polycrystalline aggregates frequently offer conductance to current flow which is many decades lower than that of single crystals of similar purity.
>
> . . . .
>
> Minority carriers are also strongly influenced by the presence of grain boundaries. An example is the photovoltaic cell, in which light-generated minority carriers must diffuse substantial distances to a collecting junction for current to be generated; here the presence of grain boundaries is quite harmful. The same grain boundary potential barrier which repels majority carriers attracts minority carriers and traps them until they recombine. This results in a short minority carrier lifetime, a property which has traditionally made polycrystalline semiconductors less than ideal for a variety of semiconductor devices such as transistors and photovoltaic cells.

071264

The importer contends that Customs cannot use a monocrystalline-vs.-polycrystalline test to determine if an electronic component is related to a transistor for tariff purposes because some transistors are composed of polycrystalline materials. Furthermore, the importer asserts that some polycrystalline transistors such as the Metal Oxide Semiconductor Field-Effect Transistor (MOSFET) and the thin-film transistor, which are two types of field-effect transistors, existed when the Tariff Schedules were enacted in 1962; therefore, it cannot be said that Congress was only referring to monocrystalline devices in its provision for transistors and other related electronic crystal components. However, according to Integrated Circuits: Design Principles and Fabrication (R. Warner & J. Fordemwalt ed. 1965), the field-effect transistor "existed as a laboratory curiosity for approximately its first decade, or from 1952 until 1962." Id. at 208. For commercial purposes, the state of the art in transistor technology in 1962 was summarized as follows in a technical reference produced by none other than the importer itself:

> At the start of the manufacturing process modern and reliable transistors require as near perfect single crystal material as possible. That is,

D1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

> crystal that exhibits an orderly arrangement of equally spaced atoms, free from structural irregularities such as grains and grain boundaries as found in polycrystalline structures. Polycrystals do not readily allow charge carriers to freely flow and are impractical to reproduce with any regularity. Furthermore, surface structure varies considerably from crystal to crystal and makes reproduction of transistors to definite specifications difficult.

GE Transistor Manual (6th ed. 1962) at 5 (emphasis in original).

Although there are polycrystalline transistors commercially available today, the polycrystalline materials of which they are composed differ significantly from the polycrystalline material in the zinc oxide varistors. In making a polycrystalline transistor, the idea is to fuse several crystals together into one large crystal through a heating process, thereby eliminating the grain boundaries between the original crystals. While not all of the grain boundaries may disappear, the resulting substance may be acceptable for a given application. Thus, the goal of this technique is to produce, in effect, a monocrystalline material without having to go through the costly, time-consuming crystal growth process. In contrast, the zinc oxide varistor polycrystalline material is specifically intended to have grains and grain boundaries, for it is these structural irregularities which give the varistors the very properties for which they are bought and sold.

Based on this fundamental difference in the physical structures of transistors and zinc oxide varistors which is necessitated by the physics of the device operation, we conclude that the subject varistors fall outside the scope of the tariff provision for transistors and other related electronic crystal components. This interpretation is consistent with the positions taken in Customs Rulings CEA-2 R:CV:MSP 058000 AB, dated March 9,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

071264

D2

1978, and CLA-2 R:CV:MSP 042656 SC, dated May 22, 1978. Varistors are not among those electronic components made from large, high-quality, single crystals of semiconductors, the development of growth processes for which is largely responsible for the rapid growth of the electronics industry during the past quarter century, see McGraw-Hill Encyclopedia of Electronics and Computers, supra at 381, nor do they operate in the same manner as those electronic components.

The importer also argues that its zinc oxide varistors are classifiable under item 687.60 because varistors are diodes, and the current Tariff Schedules specifically list diodes in item 687.72 under a superior heading for transistors and other related electronic crystal components. However, in interpreting the provisions of the TSUS, a superior heading cannot be enlarged by inferior headings indented under it. General Headnote 10(c)(i), TSUS. If we were to follow the importer's line of reasoning, then two-electrode electron tubes, which are another kind of diode, would also be classifiable under a heading for transistors and other related electronic crystal components. Yet, electron tubes are not electronic crystal components related to transistors, and neither, in our view, are zinc oxide varistors. Therefore, those articles are not classifiable in item 687.60.

It appears from the catalog of a nationwide electronics retailer that the electronics industry also does not consider metal oxide varistors to be electronic crystal components related to transistors. On pages 118-121 of the Radio Shack 1986 Catalog, that company lists a number of transistors, diodes, rectifiers, and integrated circuits under headings for "ICs and Semiconductors," "Digital ICs, Diodes," and "Transistors." However,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

071264

D3

metal oxide varistors are listed on page 131 of the catalog under a heading for "Transient Protectors," and on the same page with fuses, circuit breakers, and other items to protect circuits and equipment. Since Congress is presumed to know the language of commerce, and the object of the tariff act is to classify substances according to the general usage and denominations of trade, Nylos Trading Co. v. United States, 37 CCPA 71, 73, C.A.D. 422 (1949), this categorization of metal oxide varistors by a well-known electronics retailer supports their classification for tariff purposes not as electronic crystal components related to transistors in item 687.60, but as electrical apparatus for the protection of electrical circuits in item 685.90.

We have evidence that the chief use of the subject varistors is for the protection of electrical circuits. For tariff purposes, the "chief use" of an article is defined as "the use which exceeds all other uses (if any) combined," and it is this use which controls tariff classifications governed by use other than actual use, such as item 685.90. General Headnote 10(e)(i), TSUS. Technical experts who are familiar with varistors have advised us that the "chief use" of varistors, in the tariff context, is for the protection of electrical circuits. In addition, we have encountered a number of publications, including the retail electronics catalog referenced earlier, which discuss varistors, from a functional standpoint, only in terms of transient protection. One of these publications, a newsletter published by the importer which promotes the importer's products, contains several articles on its metal oxide varistors. See 1:3 Power Electronics, October 1984, at 1-2. The articles thoroughly discuss the varistors' use for transient protection, but mention no other uses for the products. This indicates that the importer both

071264

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D4

designs and markets its varistors as circuit protective devices, and we regard this unsolicited representation as highly persuasive evidence of the varistors' chief use.

The importer claims that the zinc oxide varistors are not within the scope of item 685.90, TSUS, because they are designed to protect components within electrical circuits, not the circuits themselves. We do not believe this distinction removes the varistors from the language of item 685.90, TSUS. Certainly, components within electrical circuits are parts of those circuits themselves; therefore, protection of a circuit component is tantamount to protection of the circuit, for if a circuit component fails, the circuit of which it is an integral part becomes inoperative. Furthermore, item 685.90 specifically provides for fuses, and there are many fuses designed and used to protect semiconductors, diodes, and other circuit components rather than entire circuits.

The importer also maintains that item 685.90 does not adequately describe the varistors because those devices perform functions other than transient protection, such as switching, voltage regulation, and noise filtering. However, it appears that a varistor performs these other functions only to the extent that it is used in its chief capacity as a protective device against transients. In other words, the varistor acts as a switch, a voltage regulator, and a noise filtering device insofar as when it absorbs a transient voltage, the varistor effectually switches off the component it is protecting, regulates voltage in the sense that it does not permit an overvoltage to be transmitted to the protected device, and filters out the electrical noise which would have been produced by the absorbed transient. Furthermore, even if the varistor can otherwise be used to switch, regulate voltage, or filter out electrical noise, classification under item 685.90 is still proper if that tariff provision describes

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

071264

DS

the article's chief use, and the evidence indicates that such is the case here. Finally, with regard to the switching function which the importer claims the zinc oxide varistor performs, we note that articles which perform switching functions are also classifiable under item 685.90, TSUS, in any event.

Lastly, the importer contends that the zinc oxide varistors cannot be classified under item 685.90 because they do not meet the definition of "apparatus." Maintaining that the courts have previously construed that term in accordance with standard lexicons, the importer submits the following language from the Institute of Electrical and Electronics Engineers Standard Dictionary of Electrical and Electronics Terms to define the term "apparatus":

> [T]he "[t]erms appliance and device generally refer to small items of electric equipment, usually located at or near the point of utilization.... The term apparatus then designates the large items of electrical equipment, such as generators, motors, transformers or circuit breakers."

Letter from importer dated December 11, 1984, at 17. In further support of its contention, the importer cites the following remark from ITT Thompson Industries, Inc. v. United States, 3 CIT 36, 537 F. Supp. 1272, aff'd, No. 82-22 (Fed. Cir. Dec. 23, 1982):

> Basically, these lexicons are in agreement that the term apparatus is collective in the sense that it is intended to encompass a group of devices or a collection or set of materials, instruments or appliances to be used for a particular purpose or a given end.

Id. at 44, 537 F. Supp. at 1277-1278 (footnote omitted).

The courts have not, however, so restricted their construction of the term "apparatus" in the context of item 685.90, TSUS. In J. E. Bernard & Co., Inc. v. United States, 59 Cust. Ct. 31, C.D. 3060 (1967), a question

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

071264

D6

arose whether an article identified at the trial as exhibit 13 and described first as a socket and later as a pin, which was used for making a connection between a wire and a printed circuit board and could also be used as a connector to be inserted into a female receptacle for completing a circuit, could be considered "apparatus" within the meaning of item 685.90, TSUS. In deciding that the article could be so considered, the court stated:

> We are aware that the word "apparatus" ordinarily connotes a complexity of materials, instruments, or machinery, and that exhibit 13 is of rather simple design.... Nevertheless, item 685.90 names as "electrical apparatus" merchandise equally uncomplex in design, ... and it would appear that this provision has not been limited by Congress to the complex.

Id. at 36. Accordingly, we do not agree that the use of the term "apparatus" in item 685.90 precludes classification of the zinc oxide varistors under that provision.

In further support of the notion that varistors meet the provisions of item 685.90, TSUS, we note Judge Nies's dissenting opinion in United States v. Siemens America, Inc., 68 CCPA 62, C.A.D. 1266, 653 F.2d 471 (1981). Discussing the lower court's conclusion in that case that former item 687.60, TSUS, is more specific than item 685.90, TSUS, the Judge said that he saw no error in the reasoning of the court below that it is more difficult to satisfy the requirements of a single kind of device than it is to satisfy the requirements of any one of many different kinds of devices, and he specifically mentioned varistors as one of those many different kinds of devices described by the langauge of item 685.90, TSUS. Id. at 71, 653 F.2d at 478-479. Thus, we conclude that the zinc oxide varistors fall within the provisions of item 685.90, TSUS.

In view of technical references to varistors either expressly as resistors or as articles identified by their resistive property, we believe

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

071269

D1

that an argument could be made for classifying the varistors under the provision for fixed or variable resistors in item 686.10, TSUS. However, in accordance with "the general rule of construction that, in the absence of legislative intent to the contrary, a product described by both a use provision and an eo nomine provision is generally more specifically provided for under the use provision," Siemens America, 68 CCPA at 70, 653 F.2d at 478, we believe that even on the assumption that varistors are described by the provisions of item 686.10, TSUS, they would nevertheless be classified under item 685.90, TSUS, as the more specific of the two tariff provisions.

HOLDING:

The subject zinc oxide varistors are classifiable under the provision for electrical apparatus for the protection of electrical circuits in item 685.90, at the 1978 column 1 duty rate of 8.5 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

[redacted]

Dear [redacted]

Further reference is made to your letter of March 3, 1983, relative, in part, to the tariff classification of your [redacted] Coating Weight Measurement and Control System for the metals Industry. The classification of the other systems involved was the subject of a previous letter from our New York office (805659).

The [redacted] System is used to measure and control the weight of coatings on metal products. It permits a line operator a rapid readout of measured coating weight so it can be kept within acceptable limits and corrective action can be taken immediately. The system consists of a precision sensor scanner, a process control module, a computer operator station, and a printer.

The precision scanner and sensor control module constitute a measuring system which is classifiable as electrical measuring apparatus under item 712.49, Tariff Schedules of the United States (TSUS), whether or not imported with the rest of the system. The process control module is a general purpose process interface classifiable under item 688.43, TSUS, as electrical articles, not specially provided for. The computer operator station is classifiable as a control panel under item 685.90, TSUS. The printer, if a free standing line type for making hard copies, is classifiable as an office machine, not specially provided for, under item 676.30, TSUS.

Sincerely,

Arthur P. Schifflin
Chief,
General Classification Branch

Jamaica, New York 11430

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-2-013174

The above-captioned protest and Application for Further Review were filed against the tariff classification of merchandise which was the subject of entry No. 81-54903-1 filed in 1981. The merchandise is a product of Sweden. Our decision follows:

ISSUE:

The merchandise was classified by Customs officers under the provision for models in item 737.15, Tariff Schedules of the United States (TSUS). The 1981 column 1 rate of duty required under that provision was 15.1 percent ad valorem. It is claimed the merchandise is classifiable under the provision for "Models of inventions and of other improvements in the arts, to be used exclusively as models," in item 737.05, which is a free-rate provision.

FACTS:

The merchandise is described as a nonmagnetic box and plastic dummy stand to be used for exhibition purposes.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D10

LAW AND ANALYSIS:

In order to qualify as a model classifiable under item 737.05, two conditions must be met. The merchandise must be a model of an invention or an improvement in the arts and it must be used exclusively as a model. As to whether the first condition is met, little has been provided in connection with this protest. It is not sufficient that an article be an invention if it was previously invented. John V. Carr & Son, Inc. v. United States, 65 Cust. Ct. 311, C.D. 4094 (1970). However, assuming arguendo that the instant merchandise does meet the first condition, it is not shown to meet the second condition because it is conceded that it is for exhibition use. Therefore, it does not qualify as a free-rate model in accordance with the rule in United States v. American Brown Boveri Electric Corporation, 17 CCPA 329, T.D. 43776 (1929), which states that use exclusively as a model means use for making or building something.

Counsel for the protestant seeks to avoid this rule by stressing four major points. The first is that the Brown Boveri decision, supra, represents obsolete authority interpreting statutory language which was subsequently amended and that the decision was based on a rationale which took into account a legislative purpose which no longer is reflected in current national trade policy.

The tariff description now contained in the TSUS and interpreted by the Brown Boveri court included models used exclusively as models "and incapable of any other use." In the Act of September 14, 1959, Pub. L. 86-262, §2(a), 73 Stat. 549, the quoted phrase was dropped in connection with an amendment which expanded the scope of paragraph 1720 of the Tariff Act of 1930. In our opinion, this deletion was incidental to the major thrust of the amendment. While changes in statutory language are presumed

073030

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D11

to involve a change in meaning, that presumption does not hold for changes which are not significant, and previous court interpretations will not be considered abrogated when such changes in language are made. Japan Food Corporation v. United States, 67 Cust. Ct. 424, C.D. 4310 (1971). Therefore, the Brown Boveri rule continues to be applicable even though, as counsel has pointed out, it has not been specifically followed since Ely & Frye v. United States, 7 Cust. Ct. 37, C.D. 529 (1941).

With respect to the point that the Brown Boveri court cited trade policy considerations in arriving at its conclusion, the decision was based on other reasons as well. Further, even if a court does look to the broader picture in its reasoning, that, by itself, would not warrant disregarding the decision merely because there have been subsequent shifts in national trade policy.

Counsel's second point is that the Congress in reenacting the language in question was probably never aware of the Brown Boveri limitation, and that if it was the legislative intent to perpetuate the rule, the Congress would have provided amendatory language clarifying the point. The fact that a court decision is not brought to the attention of legislators and becomes automatically ratified with reenactment of a statutory provision does not mean the decision is not a correct interpretation of the language.

Counsel's third point is that the Brown Boveri decision has been overruled by Pistorino & Co. v. United States, 66 CCPA 95, C.A.D. 1227 (1979). That decision, however, dealt with the meaning of the term "model" as used eo nomine. That decision is not precedent for the model provision in question which does not have the broad scope ordinarily attributable to the term "model" because of a specific use limitation. The further

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

073030

D12

contention that this use limitation is only meant to distinguish the use of models as toys from other uses is not supported by the legislative history, and counsel's citations to such materials are not persuasive of this point. The fourth major point is that use limitations in items 864.10 and 864.15, TSUS, could not, as a practical matter, be considered amenable to the type of limitation imposed by the Brown Boveri decision. The provision for wearing apparel models used as models by manufacturers in their establishments in item 864.10, suggests a manufacturing use entirely compatible with the Brown Boveri concept. With respect to models used by photographers in item 864.15, while the models may not be reproduced in a manufacturing process, the models are used for making photographs, and that use is not an exhibition use.

073030

HOLDING:

For the foregoing reasons, classification of the instant merchandise under the provision for models in item 737.15, TSUS, is not shown to be incorrect. Therefore, you are instructed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

[redacted]

SUBJECT: Internal Advice No. 144/83--Survival Suits for Rescue Work in Aircraft Fires in or over Cold Water

This is in response to your request for internal advice as to the tariff classification of aviator survival suits imported from Canada to be used in rescue, evacuation and fire-fighting in burning aircraft, especially over water.

FACTS:

The merchandise is a one-piece coverall-type suit made of Nomex III Aramid (man-made fiber) non-woven fabric. Its use and function are primarily as follows: (1) it provides occupational protection to aviators in search and rescue missions over cold water; (2) it is worn in high performance helicopters in police-type activities over water where a substantial risk of fire or explosion exists due to hostile attack; (3) it is used in cold water as a wet suit to protect the wearer against hypothermia, and (4) it is used by safety workers on off-shore oil rigs for firefighting or where explosion, fire, or ditching may occur.

This product, the Mustang Aviation Coverall (known and sold as the "MAC-20"), is the combination in one article of a wet suit designed to protect against cold water and resultant hypothermia, along with a radiant heat and flame resistant firefighting suit of special construction.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D14

The suit superficially resembles a conventional jumpsuit with a front zipper opening from the neck to below the waist. It has slash breast pockets, one pocket at the left upper leg, a pocket at the left side of the lower leg, a right hip pocket and a hood stowage pocket measuring about 5 inches by 9 inches at the right lower leg. All the pockets zipper closed. The zippers are constructed of brass covered with Aramid material so that they will not conduct radiant heat or melt closed like ordinary plastic zippers. Straps at the ankles, wrists, and neck may be adjusted for snugness.

The outer shell also has a place for safely storing a survival knife. The outer shell is flame-resistant Nomex III Aramid sewn with spun Kevlar thread for fabric integrity and is said to meet the Department of Defense specification for flammability. This importation is in connection with potential procurement by the U.S. Coast Guard.

The wet suit inner portion has closed cell foam insulation and a thermally protective hood kept in a storage pocket for use in extended immersion situations. The enclosed foam insulation provides approximately 17.5 lbs. of boyancy. The hypothermia protection is described as meeting the requirement of a maximum body core cooling rate of not more than 1 degree Centigrade per hour in choppy seas at a temperature of 4.5 degree Centigrade (40 degrees Fahrenheit).

073962

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC.

E1

Counsel for the importer has provided copies of aviation protocols from the U.S. Coast Guard showing under which flight conditions the MAC 20 suit or similar outfit is mandatory and when it is optional. This information demonstrates that the MAC 20 is authorized for non-transport helicopter crew use and that it need not be worn when water temperatures are above 70 degrees Fahrenheit. It must, however, be carried in the cabin accessible to the crew.

Counsel for the importer urges classification of this merchandise in item 389.62, Tariff Schedules of the United States (TSUS), bearing a rate of duty of 16 cents per pound plus 13 percent ad valorem. This item provides for "Articles not specially provided for, of man-made fiber: other."

The import specialist has examined a pier sample of the MAC 20 and concluded that the suit is properly classified as wearing apparel in item 379.96, TSUS, bearing a rate of duty of 16 cents per pound plus 24 percent ad valorem. This item provides for "Other men's or boy's wearing apparel, not ornamented: Of man-made fiber: Not knit: Other."

ISSUE:

Whether by operation of judicial decisions and administrative rulings, this merchandise is defined as wearing apparel.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

073962

E2

LAW AND ANALYSIS:

The basic definition of wearing apparel applied by the Customs Service is restated in Antonio Pompeo v. United States, 40 Cust. Ct. 362, C.D. 2006 (1958). Pompeo states that wearing apparel includes articles worn by human beings for "decency, comfort, or adornment" and does not include articles worn for "protection against the hazards of game, sport, or occupation, or the prevention of injury."

The distinction between providing protection against hazards, as opposed to providing decency and comfort, has been maintained by both the courts and Customs rulings since Pompeo, supra. The court has, however, observed in Admiral Craft Equipment Corp. v. United States, 82 Cust. Ct. 162, 163, C.D. 4796 (1979) that "[a]n important, if not primary, purpose of wearing apparel is protection against the environment", and in so doing, specifically distinguished Pompeo on its facts. Also, more recently, the Court of Appeals for the Federal Circuit in reversing the Court of International Trade noted that "[v]irtually all wearing apparel is to a degree (often a high degree) designed and worn to provide comfort and protection, often for very specific situations." Daw Industries, Inc. v. United States, Appeal No. 83-833, decided August 9, 1983. Therefore, an article need not be eliminated from consideration as wearing apparel simply becuse it provides some protection from hazards or the

073962

E3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

elements. The court has refrained from establishing an immutable test for deciding what is included in wearing apparel. Instead, it appears to have recognized a continuum with merchandise providing adornment, comfort, or decency at the wearing apparel end and purely protective gear at the other.

This office has ruled on protective clothing used by fire fighters. Headquarters Ruling Letter (HRL) 068879 PR, issued October 22, 1981. This ruling, concerning "Turnout Clothing" in the form of a coat and pants, noted that the articles were composed of a Nomex III outer shell with Kevlar needle punched thermal insulation innerlining. The Nomex III is said to be fire, acid, and chemical resistant. The garment was classified as articles, n.s.p.f., instead of as wearing apparel.

Our ruling, HRL 060939 BB, issued December 11, 1979, published as C.S.D. 80-169, noted the protective qualities of a "Hypothermia Emergency Lifesaving Protector" in classifying a wool blanket-like article as an article, n.s.p.f., of textile materials, not as a blanket. Likewise, HRL 046332 FF, issued November 30, 1976, classfied an MK II Bomb-suit as articles, n.s.p.f., of textile material, as opposed to wearing apparel. The protective properties of the garment were also noted, but not determinative in a ruling on an emergency survival garment, HRL 049482 PR, issued August 23, 1978.

073962

E4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

This ruling classified a hooded poncho with separate leg portions as wearing apparel. While it was noted that the garment did provide some protection, this office concluded that "the real reason the article is worn is for the wearer to achieve a maximum degree of comfort under adverse weather conditions."

Past headquarters rulings create some distinctions between clothing that provides protection from bad weather, as opposed to clothing that protects the wearer against specific injury or extremes of heat or cold created by unplanned, abnormal or unwelcome events. Thus heavy-duty ski jackets intended to be worn in cold and snow for many hours are always wearing apparel, while the inflatable life vest, for example, worn following the sinking of a ship is considered articles, n.s.p.f., according to component material of chief value. HRL 042792 PR, issued May 17, 1976, recognized life saving characteristics of a vest for children who could not swim. The vest parts were classified as articles, n.s.p.f., of textile material. Also, our ruling issued as ORR 73-139, dated March 16, 1973, concerned a coated nylon boating flotation jacket classified as articles and not wearing apparel. Likewise, our ruling TC 474.5 v, dated August 14, 1969, also classified life saving vests as articles and not wearing apparel.

073962

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

ES

We note that the portion of the instant merchandise that provides thermal insulation and protection from hypothermia could qualify for exclusion from the wearing apparel classification. Falling or having to jump into a cold body of water is undeniably life-threatening because, in the absence of hypothermia protection, even strong swimmers quickly become disoriented and unable to save themselves. In these circumstances, the presence of a thermally protective garment is not a matter of comfort, but rather a condition of survival. However, these features are added features to flight coveralls usually worn on military aircraft. They would provide protection should there be an accident, but this is distinguishable from clothing worn by firefighters occupied in fighting an existing hazard. This type of clothing is removed soon after the fire is put out. The occupation of flying a helicopter is not so hazardous that the protective features are required; although they may be desirable. Compare this to the firefighter or the person who cleans up after nuclear accidents, where the failure to wear the protective garment would result in almost certain harm. The garments under consideration would not be given to a person to fight an existing hazard which would be determinative in deciding whether a garment is "protective" for tariff classification purposes and not specialized clothing.

073962

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E6

HOLDING:

The instant merchandise is classifiable in item 379.96, TSUS, as wearing apparel.

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: 27 FEB 1985

FILE: CLA-2 CO:R:CV:G
074648 JCH

TO : Area Director of Customs
JFK Airport
Jamaica, New York 11430

FROM : Director, Classification and Value Division

SUBJECT : Request for Internal Advice No. 92/83 Concerning the Tariff Classification of a Laser Diode Optical Head (Your Undated Memorandum CLA-2-K:C:D1/2 RS K:C: 0098)

The subject internal advice request was initiated by counsel for the importer in a letter dated May 10, 1983. The merchandise is a product of Japan. Our decision follows:

ISSUE:

The merchandise was entered under the provision for television apparatus and parts in item 685.19, Tariff Schedules of the United States (TSUS). The column 1 rate required under that provision in 1983 was 4.4 percent ad valorem. In a notice of proposed rate advancement, it was indicated the merchandise was properly classifiable under the provision for optical instruments and appliances, not specially provided for (n.s.p.f.), in item 708.89, TSUS, for which the 1983 column 1 rate of duty was 15.8 percent ad valorem. It is now claimed that the merchandise is classifiable under either the provision for

68

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

office machines, n.s.p.f., in item 676.30, TSUS, for which the 1983 column 1 rate of duty was 4.4 percent ad valorem, or under the provision for parts of office machines in item 676.52, TSUS, for which the 1983 column 1 rate of duty was 4.7 percent ad valorem.

FACTS:

The laser diode optical head in question functions in either a record or playback mode in a recording system in which data is recorded on discs. Similar technology is used to record sound or video signals on similar discs for home entertainment systems. In the record mode, the head focuses a laser beam on a sensitized disc where microscopic pits are formed that vary with modulations in the laser signal. In the playback mode, the laser beam picks up the recorded signal from the pits transferring the signals back to modulated electrical impulses. In both modes, the device is described as employing prisms, mirrors and lenses.

The heads which were the subject of the specific importations involved used separate lens systems for the recording and playback modes. Newer versions of the device use a single aperature for both modes. It is contended the articles are not used in home entertainment systems, but rather are chiefly used in data processing equipment. In one of the exhibits submitted to explain the type of equipment the heads are used in, the larger instruments are

074678

E9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

described as "optical memory units" which boost computer storage. Samples of the merchandise were also shown, and they were small devices lacking housings and had the appearance of a part of another article.

LAW AND ANALYSIS:

At the outset, classification as office machines in item 676.30 must be ruled out because it has been our consistent position that merchandise lacking a housing and included within the housing of a larger article which it is used as a part of does not meet the definition for an office machine in Headnote 2(a), Subpart G, Part 4, Schedule 6, TSUS. See, for example, our decision of November 5, 1981, file No. 068986. Accordingly, the next issues for consideration are whether the merchandise is, in fact, described by item 708.89, and if so, whether that is a more specific provision than the provision for office machine parts in item 676.52.

Any argument that articles such as the instant merchandise, which are used as parts of larger articles, do not qualify as "instruments and appliances" within the meaning of item 708.89 cannot prevail in view of Norman G. Jensen, Inc. v. United States, 77 Cust. Ct. 9, C.D. 4668 (1976), in which parts of articles were classified under that item. While counsel has cited Wild Heerbrugg Instruments, Inc. v. United States, 81 Cust. Ct. 66, C.D. 4767 (1978), for a contrary view, the

074648

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

court in that matter did not exclude the merchandise in liti-litigation from item 708.89 because it was a part, but because as a part, it was more specifically described by item 708.80, TSUS.

Nor can item 676.52 prevail on the basis of General Headnote 10(ij), TSUS, and the n.s.p.f. phrase in item 708.89. In spite of that phrase, item 708.89, unlike other n.s.p.f. provisions, is treated as a specific provision for relative specificity purposes because it is further limited by both its own terms and controlling headnotes. Norman G. Jensen, Inc. v. United States, supra. See also the comments in United States v. Porter, 68 CCPA 15, 18, C.A.D. 1259 (1981), with respect to Parts Manufacturing Associates, Inc. v. United States, 73 Cust. Ct. 42, C.D. 4552 (1974). While it is noted the court in Wild Heerbrugg, supra, at 70, stated item 708.89 was "at best residual," that was in reference to the competition in litigation which was restricted to Schedule 7, TSUS, provisions.

This matter then is one essentially involving the broader question of the extent articles which incorporate both electrical or electronic features and optical features may be classified as optical instruments. The dutiable status of such merchandise was previously in doubt under the primary-or-dominant standard mainly associated with United States v. American Machine & Metals, Inc., 29 CCPA 137, C.A.D. 183 (1941), since it could always be argued the electrical feature

074648

E11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

and the optical feature were at best co-equal. That standard, therefore, was abandoned by Headnote 3, Part 2, Schedule 7, defining "optical instruments." Under that headnote the standard is rather whether the optical feature is subsidiary or not subsidiary. Corning Glass Works v. United States, 82 Cust. Ct. 249, C.D. 4807 (1979); Librascope v. United States, 76 Cust. Ct. 197, C.D. 4656 (1976). See also United States v. Ataka America, Inc., 64 CCPA 60, C.A.D. 1184 (1977), in which the court stated, in effect, that it was a contradiction for an article to be regarded as more than optical and other than optical or nonoptical at the same time. While the issue of the tariff classification of articles which combine electrical and optical features may appear to be most pertinent to Subparts B and D, Part 2, Schedule 7, they are equally pertinent to item 708.89 and other Subpart A, Part 2, provisions. Note, for example, that items 708.61 and 708.78 in that part also clearly presuppose such combination instruments.

While counsel has cited several Customs decisions which postdate the Ataka decision, supra, which was the first appellate court statement under the TSUS dealing with articles which combined electrical and optical features, those decisions, for the most part, still reflected application of a philospophy of classification in which the primary-or-dominant standard still played a significant role, along with the other criteria

070648

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

for the classification of optical goods mainly associated with Engis Equipment Company v. United States, 62 Cust Ct. 29, C.D. 3670 (1969). However, the administrative decisions relied on by counsel predate our decision of June 9, 1982, IA 124/81, file No. 067495, in which we stated in dealing with the tariff classification of merchandise incorporating a laser optical feature that to strictly require compliance with all of the Engis criteria in order for merchandise to qualify as optical goods "would virtually eliminate further classification of considerable merchandise" under the applicable optical goods provisions. We further noted in that decision, "Previous decisions * * * at variance with this position are no longer followed." Against this background, and considering the new technology which the instant merchandise represents, we believe its classification must be reviewed independently of previous administrative decisions, the current precedential status of which is now in question.

Accordingly, the main issue in this matter, and the one upon which counsel has focused attention, is whether the instant merchandise in spite of its clearly optical designation, the optical designation given merchandise it is used as a part of, and its employment of complex optical phenomena through the incorporation of not just one optical element, which is all that is necessary to meet the definition for an optical instrument in Headnote 3, Part 2, Schedule 7, but of

074648

E13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

several optical elements, an optical instruments classification can be avoided because it does not directly or indirectly aid vision. Except for technical applications which the instant merchandise represents in which sound is recorded and reproduced, the recording and reproduction of signals which are first sensed by a camera, as in the case of video signals, or which in their original form comprise data in alphanumeric form readable by the human eye, in the case of the recording of data, and in which the playback is an image on a CRT, the basis for claiming the instant apparatus does not indirectly aid vision is not completely convincing.

While counsel has cited Ataka, supra, at 66, for the proposition that optical instruments must "permit or enhance" vision, we stated in our decision of February 21, 1984, IA 48/83, file No. 071436, that the "creation of a picture or image is not the sine qua non of an optical instrument or apparatus," and the enhancement of vision is accomplished if electronic apparatus "replaces or goes beyond a function previously performed with the human eye." The reading and conversion of data in alphanumeric form, the conversion of it to digital form whether involving electronic or optical phenomena, and the reconversion of it to alphanumeric form for reproduction on a CRT, etc., certainly is the replacement of a function performed by the human eye. We even stated in IA 124/81, supra, that human vision is aided even if an image

071648

E14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

on a CRT is not produced, but data in printout form is what is provided. Cf. Corning Glass Works v. United States, supra.

But assuming arguendo, as counsel contends, that the instant article does not directly permit or enhance human vision, as referred to by the Ataka court, that still would not be a basis for avoiding an optical instruments classification. In the material quoted from the Ataka decision, the court was only speaking "broadly" or generally and prefaced its remarks, Ataka, supra, also at 66, with the statement that "[n]one of the foregoing [Engis] criteria is determinative in every case" for determining what is or what is not an optical instrument. In other words, under the Ataka decision the Engis criteria are to be regarded as disjunctive rather than conjunctive. For the foregoing reasons, the current views of the Customs Service are that the definition for optical instruments in Headnote 3, Part 2, Schedule 7, is specific authorization for including under the optical goods provisions articles which combine electrical features without recourse to various applications of the "more than" rule which is what the primary-or-dominant classification criterion was in actuality another version of.

HOLDING:

Therefore, the instant laser diode optical heads are properly

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

074648

F1

classifiable under the provision for optical instruments and appliances in item 708.89, TSUS. A copy of this decision may be made available to the internal advice applicant.

William E. Melahn, Esquire
Doherty & Melahn
P.O. Box 363
One Devonshire Place
Boston, Massachusetts 02101-0363

Dear Mr. Melahn:

Recently you inquired about the tariff status of an article known as a "Lullabear" for your client Playskool, Inc., a division of Milton Bradley Company. You submitted a sample of the article along with your letter.

The sample "Lullabear" is described as an infant's musical textile article made of fleece polyester. Its measurements are approximately 15 inches by 22 inches. The upper half resembles a bear lying in bed under a cover. The lower half of this article is a napped woven fabric, while the upper part is a printed woven fabric sewn to a knit back. The bear feature (face and hands) is made of a pile fabric. A textile lace trim is sewn across the cover. Underneath the bear's chin is stitched a piece of satin man-made fiber fabric ribbon measuring 15 inches in length by 1.5 inches in width which has been tied into a bow. A heart-shaped electronic musical module with an open hook at the top is inserted into the bow under the bear's chin. The sound is produced by touching a battery. The open hook allows the musical part to be slipped on or off the article. It is intended for infants.

You believe that there are 4 possible classifications for this item:

(1) as a toy in item 737.95, Tariff Schedules of the United States (TSUS),
(2) as bedding in item 363.25, TSUS,
(3) as an article not specially provided for, of textile materials, ornamented, of man-made fibers, in item 386.13, TSUS, or
(4) as an electrical article, not specially provided for, in item 688.34, TSUS.

F3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

You think that the item is classifiable in item 688.34, TSUS, because the electric article gives it a unique feature.

Headnote 2 of Schedule 7, Part 5, TSUS, provides that "For the purposes of the tariff schedules a 'toy' is any article chiefly used for the amusement of children or adults." In our opinion, the article lacks the amusing features, appearance and play value normally associated with toy playthings. It is not a toy for tariff purposes.

The small dimensions of the article would not permit it to be used as a cover or as a source of warmth, therefore it cannot be considered a blanket or a coverlet for tariff purposes.

Next we must consider whether the musical component and the textile cover are to be regarded as an entirety or whether they are separately classifiable. As the Customs Court observed in J.C. Penny Purchasing Corporation v. United States, 77 Cust. Ct. 48, C.D. 4671 (1976), "In general, an article is regarded as an entirety when the joined components form a new article which possesses a character or use different from that of any of its parts, or when one of the elements of the component is predominant, the other parts being merely incidental to the predominant part." The Customs Court also observed, in Donald Ltd. v. United States, 32 Cust. Ct. 310, C.D. 1619 (1954), that "If what is imported as a unit is actually and commercially two or more individual entities which even though imported joined or assembled together, nonetheless, retain their individual identities and are not subordinate to the identity of the combination, duties will be imposed upon the individual entities in the combination as though they had been imported separately."

In the case of the instant merchandise, the individual parts do not lose their individual identities; each may be used separately. The musical module may be removed and used by itself. The cover retains its identity and can be used without the musical module.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

074913/810081

F4

Accordingly, the battery operated musical module is classifiable under the provision for electrical articles not specially provided for, using pre-programmed digital integrated circuits to produce sound, in item 688.34, TSUS, dutiable at the 1985 Column 1 rate of 4.3 percent ad valorem. If replaceable, the battery is classified separately, under the provision for primary batteries in item 682.95, TSUS, dutiable at the 1985 Column 1 rate of 6.1 percent ad valorem. The cover is classifiable under the provision for articles not specially provided for, of textile materials, ornamented, other, of man-made fibers, in item 386.13, TSUS, dutiable at the 1985 Column 1 rate of 15 percent ad valorem. Items 688.34, 682.95 and 386.13, TSUS, are all duty free under the Generalized System of Preferences if the imported articles are manufactured in Taiwan.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Mr. Robert H. Gerrity
Collector Auto Service Co.
28048 13th Avenue South
Kent, Washington 98032

Dear Mr. Gerrity:

Recently you asked our New York office to furnish a tariff classification covering wooden automobile models produced in Taiwan. Your letter, a descriptive brochure, and a sample car were forwarded to this office for reply.

The descriptive literature indicates that the items in question are all wooden cars representing various antique models. The wooden cars measure 15 inches in length. They may have movable wheels and compartments which open.

A sample of a 1907 Rolls Royce Silver Ghost was submitted. It has functional wheels and a removable drawer (located at the rear of the car) which measures 5 inches in length by 3 inches in width by 1 inch in depth.

You stated that the wooden cars may be imported in the following conditions:

(1) with functional wheels and a compartment which opens,
(2) with static wheels and a compartment which opens,
(3) with functional wheels and no compartment, or
(4) with static wheels and no compartment.

Headnote 2 of Schedule 7, Subpart 5E of the Tariff Schedules of the United States (TSUS), defines a toy as "any article chiefly used for the amusement of children or adults." The Customs Court has stated that articles which are essentially passive, uncomical and non-manipulative are not classifiable as toys. In the present situation, an examination of the sample reveals that it is not manipulative because it is of a rather fragile construction. It is essentially passive. It is not comical in design nor in appearance. The wooden automobile models do not qualify as toys for tariff purposes.

The sample 1907 Rolls Royce Silver Ghost represents a specific car from a specific era; it is identifiable as a model of a Rolls Royce Silver Ghost from approximately 1907. The descriptive brochure distinguishes all the models in terms of type of vehicle and the year involved. The sample and the models pictured in the descriptive brochure are not crude models, although they are not scale models.

F6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

We find that the wooden automobile models without compartments which open are classifiable under the tariff provision for non-scale models in item 737.15, TSUS, dutiable at the 1985 Column 1 rate of 10.2 percent ad valorem. Articles which are classifiable under item 737.15, TSUS, which are produced in Taiwan are entitled to duty-free treatment under the Generalized System of Preference.

The wooden automobile models with compartments which open, however, are a different matter. They are more than models inasmuch as the drawers could serve a utilitarian function by holding matches, cuff links, tie clasps, packs of gum or other small items. We find that the wooden automobile models with compartments which open are classifiable under the provision for household articles of wood in item 206.98, TSUS, dutiable at the 1985 Column 1 rate of 5.1 percent ad valorem.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Ms. Judy L. Cook, Manager
Import Department
Pagoda Trading Company, Inc.
44 Kimler Drive
St. Louis, Missouri 63043

Dear Ms. Cook:

Recently you submitted an inquiry concerning the tariff classification of your Style 92180, a pearl coated nylon upper hi-jack boot of cement construction. You submitted a sample of Style 92180 and swatches of material both coated and uncoated along with your letter.

The issue in this case is a plastic coating on a fabric upper for footwear. The central question presented is whether the plastic coating on the fabric visibly and significantly affects the surface thereof within the purview of Headndote 3, Schedule 7, Subpart 1A, Tariff Schedules of the United States (TSUS). Headnote 3, supra, provides that "For the purposes of items 700.51 through 700.56, the rubber or plastics forming the exterior surface area specified, if supported by fabric or other material must coat or fill the supporting material with a quantity of rubber or plastics sufficient to visibly and significantly affect the surface otherwise than by a change in color, whether or not the color has been changed thereby."

Headnote 2(a), Schedule 3, Subpart 4C, TSUS, provides that "For the purposes of the tariff schedules, the term 'coated or filled,' as used with reference to textile fabrics and other textile articles, means that any such fabric or other article has been coated or filled (whether or not impregnated) with gums, starches, pastes, clays, plastics materials, rubber, flock, or other substances, so as to visibly and significantly affect the surface or surfaces thereof otherwise than by a change in color, whether or not the color has been changed thereby."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

58

The United States Customs Service issued a notice (published as T.D. 81-219) which interpreted the case of H. Rosenthal Co. v. United States, 81 Cust. Ct. 77, C.D. 4769 (1978). The Rosenthal court held that certain fabric was coated or filled for the purposes of Headnote 2(a), Schedule 3, Subpart 4C, TSUS, supra. T.D. 81-219 provided in part that "Considering the holding in Rosenthal and the stated basis for that holding, Customs will consider the surface of a fabric to be visibly affected by a coating or filling if, (1) the coating or filling material can be separately distinguished from the fabric by the naked eye; (2) the coating or filling material imparts a shine, luster or glossy appearance, or a dull appearance, that is noticeable by a casual examination; or (3) the coating or filling material has caused the fabric to have a pronounced (obvious) appearance of stiffness. With regard to the appearance of stiffness, the fabric should appear significantly more rigid than that fabric would be if not coated or filled."

In Customs Headquarters Ruling Letter (HRL) 069067, dated November 4, 1981, we indicated that since the language of the cited headnotes, supra, is so similar, the interpretation of the Rosenthal case set forth in T.D. 81-219 is applicable to footwear.

Your two sample swatches of nylon upper material were forwarded to us along with a sample shoe of Style 92180. Swatch A, the plastic coated material, weighs 7.25 grams per square foot. Swatch B, the uncoated nylon material, weigh 5.25 grams per square foot. The coated fabric appears similar to but distinguishable from the swatch in the Rosenthal case. Swatch A does not meet any of the requirements, set forth in T.D. 81-219, which constitute a plastic coated surface.

In accordance with the information noted above, we find that Style 92180 contains a fabric upper and is classifiable under the provision for footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics in item 700.61, TSUS, dutiable at the 1985 rate of 37.5 percent ad valorem, assuming that the value of a pair of Style 92180 is not over $6.50. The sole does not overlap the upper except at the toe.

075179/810952

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

This letter applies solely to the instant coating on the instant fabric. Inasmuch as identical coatings might have different result on different fabrics, we will rule on each such combination on a case by case basis.

Sincerely,

Arthur P. Schifflin

810307

Mr. Eric Reynolds, Vice President
Marmot Mountain Works
331 South 13th Street
Grand Junction
Colorado 81501

Dear Mr. Reynolds:

Your inquiry concerning the tariff classification of a sleeping bag stuff sack and a sleeping bag storage sack was forwarded to this office by our New York office. Your two samples were forwarded to us along with your inquiry.

Both samples are made of textile materials. The nylon stuff sack measures approximately 15 inches in height, 12 inches in width and has a circular bottom panel 7 inches in diameter. A spring action cord lock on a braided cord drawstring closes and secures the bag at its top. The cotton storage sack measures approximately 38 inches in height and 23 inches in width. A braided cord drawstring and cord lock also close and secure the storage sack.

You state that both sacks are accessories necessary for the proper care of down sleeping bags. You say that the water-proof nylon stuff sack is used in the field to make a sleeping bag compact and able to fit into a backpack. The cotton storage sack is used to protect the down bag while not in use at home, thereby allowing the down to aerate and to remain fully expanded while not in storage.

You intend to import sleeping bag shells with stuff sacks and storage sacks included. You also intend to import stuff sacks and/or storage sacks separately. You ask whether the sacks are classifiable under the provision for articles not specially provided for, of feathers, in item 748.55, Tariff Schedules of the United States (TSUS),

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F11

inasmuch as the value of the sacks would be included in the cost of the sleeping bag shells.

We believe that, even if the sacks were imported with completed sleeping bags, they would not be considered an entirety with the bags inasmuch as they perform no function in the actual use of the sleeping bags but are merely optional equipment for storing or transporting the sleeping bags. Therefore these sacks would not be classifiable in item 748.55, TSUS, even if imported with sleeping bags classifiable in that number.

The term "luggage" is defined in Headnote 2(a)(i), Schedule 7, Subpart 1D, TSUS to include "(i) travel goods such as trunks,...knapsacks, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel.

In United States v. Standard Surplus Sales Inc., 69 CCPA 34, Appeal No. 81-13 (1981), the Court of Customs and Patent Appeals reversed the lower court's decision and held that backpacks which are chiefly used in the sport of backpacking are luggage and not sport equipment. We believe that Surplus Sales, supra, governs the classification of the stuff sacks.

The second sample is a storage sack used for storing down sleeping bags when not in use. Such storage sacks are usually made of breathable cotton which allows the sleeping bags to aerate. Storage sacks are different from the substantially constructed stuff sacks in that they are neither designed nor intended for use during travel. The storage sacks are used before and after the sleeping bag has been transported in the stuff sack. We believe that the instant storage sack does not meet the definition of luggage in Headnote 2(a), supra. Accordingly

075253/810307

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F12

luggage in Headnote 2(a), supra. Accordingly it is precluded from classification in the luggage provisions.

The cotton storage sack is classifiable under the provision for articles not specially provided for, of textile material, not ornamented, of cotton, in item 386.50, TSUS, dutiable at the 1985 rate of 9.3 percent ad valorem.

It is our opinion that the nylon stuff bag is classifiable under the provision for luggage of other textile materials in item 706.4152 and dutiable at the rate of 20 percent ad valorem, regardless of whether the stuff bag is imported separately or with the sleeping bag shells. (See Customs Headquarters Ruling Letter (HRL) 075318, dated February 28, 1985, in which a backpack with a braided drawstring closure was found not to be wholly nor in part of braid). The textile quota number applicable to item 706.4152, TSUS, is 670. Luggage produced in South Korea or in Taiwan and classifiable in item 706.4152 is currently subject to textile quota restraints.

Sincerely,

Arthur P. Schifflin

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1303-2-000010

The above-captioned protest and application for further review were filed against your classification of Halloween horns which were the subject of entry No. 81-163248-9 filed at the port of Baltimore in 1981. This merchandise is a product of Hong Kong. Our decision follows:

ISSUE:

The merchandise was found dutiable under the provision for toys, not specially provided for (n.s.p.f.), in item 737.95, Tariff Schedules of the United States (TSUS). An exemption from duty under the Generalized System of Preferences (GSP) was not available under that item for products of Hong Kong and the applicable column 1 rate in 1981 was 14.9 percent ad valorem. It is contended in the protest that the merchandise is properly classifiable under the provision for "confetti, paper spirals or streamers, party favors, and noisemakers" in item 737.70, TSUS, a classification which would permit the GSP exemption. The main issues, therefore, are whether the latter provision is a more specific description for the merchandise, as claimed, or whether its language does not encompass the merchandise at all.

F14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

FACTS:

The merchandise consists of plastic horns 10 inches long with bulbs at the ends depicting a skull or other Halloween theme. A copy of an advertisement has been submitted from an unidentified retailer describing the merchandise as a "skull or cat horn * * * for the kids to scare off goblins." Other items in the advertisement include other Halloween novelty articles and candy bars.

LAW AND ANALYSIS:

We, in effect, have previously held that merchandise is not included in item 737.70 if it has play value in addition to any noise making capabilities. Counsel contends that that position is in error, and, if not, the only play value of the instant merchandise is its noise making capability. While that may be true, tariff terms still do not necessarily include everything literally within their meaning. See, for example, General Methods Corporation v. United States, 59 CCPA 109, C.A.D. 1049 (1972). Constraints against such broad interpretations may be required under such doctrines as noscitur a sociis which we find is applicable here.

Under that doctrine, the meaning of a tariff description may be ascertained by reference to the meaning of other terms associated with it. In our opinion, all of the exemplars listed with noisemakers involve articles used at parties or

075402

G1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

other celebrations, and noisemakers contemplated have the same uses. While counsel contends that the instant articles are used at Halloween parties, other activities aside from parties, as in the case of New Years Eve parties and birthday parties are associated with Halloween. Accordingly, any claim of chief use of the instant articles at parties is not substantiated.

Of course, there are also other factors pertinent to chief use, such as channels of trade and other circumstances in which merchandise is bought and sold. While the identity of the retailer whose advertisement has been submitted has not been disclosed, the retailer is probably similar to those of small department stores, chain drugstores, etc. We take administrative notice of the fact that those types of outlets ordinarily do not deal in party favors and related articles, and such articles are only generally available in more specialized retail operations. We further note that the advertisement in question says nothing about use for parties and otherwise deals in toys, lipstick, make-up, flashlights, candy, etc.

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 14043000022

The above-captioned protest and application for further review were filed against the tariff classification of merchandise which was the subject of entry Nos. 401149, 401433, and 401761 filed at the port of Richmond in 1983. The merchandise is a product of the Peoples Republic of China. Our decision follows:

ISSUE:

Duty was liquidated for all the articles in question under the provision for corduroy furnishings in item 366.63, Tariff Schedules of the United States (TSUS), which required in 1983 a column 1 rate of 32.3 percent ad valorem. The claimed alternative classifications are the provision for stuffed cotton pillows and cushions in item 727.82, TSUS, which required a 1983 column 1 rate of 9 percent ad valorem, and the provision for furniture, and parts thereof, not specially provided for (n.s.p.f.), in item 727.70, TSUS, formerly item 727.55 which required a 1983 column 1 rate of 7 percent ad valorem. The main issues thereby raised are whether item 727.82 includes articles which are unfinished in the sense that they are not stuffed or filled or do not have springs, and if not, whether

G4

THIS DOCUMENT MAY BE RELEASED TO THE

item 366.63 is a less specific basket provision for the merchandise requiring classification under the item 727.70 basket provision.

FACTS:

The merchandise is variously invoiced as pillow covers and cases in style Nos. 21, 23A, 23B, 24, 52, 5662 and 5665. Also included were seat cushion style Nos. 5669 and 5671 and back cushion style No. 5670. These articles are filled with a molded foam rubber insert after importation. The seat and back cushions are used on such furniture as Boston rocker-type chairs. Information has also been submitted purporting to show that the covers and cases in their condition as landed represent more than 50 percent of the value of the finished cushions.

Reference was also made in the brief filed in this matter to various types of bolster covers in style Nos. 5666, 5667 and 5668 for which classification under the provision for bolster cases in item 363.30, TSUS, is claimed, but there is no reference to any such articles in the copies of the entry documentation included in the protest file which has been forwarded to us.

075405

65

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

075405

LAW AND ANALYSIS:

General Headnote 10(h), TSUS, states that a tariff provision includes articles "whether finished or not finished," but that provision does not apply if "the context requires otherwise." In our opinion, the specific enumeration in the superior heading for item 727.82 of pillows or cushions "fitted with springs, stuffed, or both, or of expanded, foamed, or sponge rubber or plastics" constitutes language requiring that the instant merchandise be regarded as otherwise than unfinished pillows or cushions.

Counsel seeks to avoid this conclusion by asserting that the prepositional phrase also in the superior heading governing item 727.82 classifications beginning with the words "whether or not" carries through to the above-quoted description thereby requiring it to be read "whether or not * * * fitted [etc.]," that, contrary to our conclusion, the opposite is the case, and that the superior heading clearly contemplates pillows and cushions which in their condition as imported are unstuffed. However, between "whether or not" and "fitted" is another prepositional phrase starting with "with or without" which rather clearly shows the end of the whether-or-not phrase and the beginning of a new prepositional phrase. If the whether-or-not phrase were

G6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

deemed to continue beyond that point, then the word "without" would be redundant. However, tariff descriptions are to be interpreted insofar as possible by attaching meaning to all of their terms. Tuscany Fabrics, Inc. v. United States, 65 Cust. Ct. 182, C.D. 4076 (1970).

We, therefore, do not agree that the whether-or-not phrase somehow picks up again after the with-or-without phrase and are aware of no rule of grammar or syntax which would require that conclusion. Nor do we agree with the necessary corollary to counsel's proposition, that the wording of the superior heading in question is intended as an exception to the rule which limits General Headnote 10(h) and excludes an article from being regarded as unfinished if in its condition as imported it lacks the part which imparts to it its essential characteristics. See, for example, Daisy-Heddon v. United States, 66 CCPA 97, C.A.D. 1228 (1979).

Accordingly, we read the superior heading in question as providing for "pillows, cushions * * * stuffed." Read in this manner, the provision poses no ambiguities, and the authorities cited in the protest for the proposition that ambiguities must be resolved in favor of the importer are shown to be inapposite here.

075405

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Because the articles are not the type of furnishing contemplated by item 727.82 does not make them classifiable as furniture parts in item 727.70. We note the stalwart authority cited regarding the principles applicable to placements in or exclusions from parts provisions. We also note counsel's observation that item 366.63 may be a basket provision no more specific than the basket provision in item 727.70 by virtue of the n.s.p.f. clause in Headnote 1, Subpart G, Part 5, Schedule 3, TSUS. However, those references are also inapposite. What is controlling here is Headnote 1(vi), Part 4, Schedule 7, TSUS, which excludes from that part, where item 727.70 appears, any merchandise also described in Part 5, Schedule 3. With respect to any underlying contention that the merchandise is not described in that part, we note that in Brentwood Originals v. United States, 73 Cust. Ct. 185, C.D. 4572 (1974), cited by counsel, the court excluded bolster covers from item 366.63 not because they were not described by that item, but because they were more specifically provided for by another provision in which they were parenthetically referred to by name. Against the background of that decision, any further argument that pillow and cushion covers are excluded from Headnote 1, Subpart C, Part 5, Schedule 3, by the application of ejusdem generis or under any other theory is not convincing.

075405

68

RELEASED TO THE PUBLIC

Nor can the fact that the covers cost more than their inserts be the bootstrap to get them in item 727.70.

HOLDING:

For the foregoing reasons, we find that the corduroy pillow and seat cushion covers which are the subject of the entries involved in this protest are properly classifiable under the provision for corduroy funishings in item 366.63, TSUS. Therefore, you are instructed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

District Director of Customs
610 South Canal Street
Chicago, Illinois 60607

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 39014000410

The above-captioned protest and application for further review were filed against the tariff classification of merchandise which was the subject of entry No. 741998 filed at the port of Chicago in 1983. The merchandise is a product of England. Our decision follows:

ISSUE:

Duty was liquidated at the 1983 column 1 rate of 4.4 percent ad valorem under the provision for parts of apparatus based on the use of radiations from radioactive substances in item 709.66, Tariff Schedules of the United States (TSUS). It is contended the correct rate of duty is 2.3 percent ad valorem required in 1983 under column 1 for parts of X-ray apparatus in item 709.63, TSUS. The main issue is whether apparatus which employs X-rays only in a detection sense and which contains no vacuum tubes or other electrical X-ray generating components may be regarded as X-ray apparatus.

FACTS:

The merchandise consists of encapsulated cadmium 109 which is used together with iron 55 as the radioisotopic excitation energy source in a system using the X-ray fluorescence phenomenon. The apparatus, consisting of a

G10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

probe and, among others, a part described in the submitted literature as an "X-ray detector", can perform such functions as determining the type of alloy used in a pipe weld by a nondestructive analyzing method.

075518

LAW AND ANALYSIS:

Counsel for the protestant contends that item 709.63 describes the merchandise at issue, and that that provision is more specific than item 709.66. If this matter did involve the issue of the relative specificity of these two items, we doubt that the enumeration of three specific types of radiation in the latter provision, viz., alpha, beta and gamma rays, would make it more specific than the former provision only naming X-rays. X-rays still may involve a broader spectrum of energy levels and for that reason could be regarded as constituting a less specific energy designation. In fact, it is the principle of the varying levels of X-ray energy on which the instant apparatus operates.

But if relative specificity were the issue, counsel would not have to show item 709.63 was the more specific provision. It would be sufficient merely to show it is an equally specific provision. Since both of the competing provisions carry the same statutory rate and the provision for X-ray apparatus appears in the TSUS ahead of item 709.66, the former would have to prevail under the rule in General Headnote 10(d), TSUS. But it has been our position that item 709.63 only contemplates apparatus in which X-rays are

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

generated by vacuum tubes or other electrical means. See our decision of July 10, 1972, ORR 72-281, a copy of which has been furnished to counsel. Our decision of November 18, 1977, file no longer available, which counsel has cited for an opposite conclusion is not shown to involve X-ray apparatus lacking vacuum tubes or other electrical generating means.

Our position is supported by background information in the Explanatory Notes to the Brussels Nomenclature (1966 ed.), Vol 3, pp. 1591 - 1593. Counsel believes our reliance on that reference is misplaced because the plain meaning of item 709.63 is otherwise and, in such circumstances, extraneous aids may not be resorted to.

It is well established that the cited explanatory materials for the Brussels Nomenclature (now the Customs Cooperation Council Nomenclature) constitute legislative history where the Brussels and TSUS provisions are similar. Carrington Co. v. United States, 70 Cust. Ct. 105, C.D. 4415 (1973), and authorities cited therein. While counsel has cited authority for rigid rules concerning the use of extraneous aids and limiting them only to instances of statutory ambiguity, any extensive reading of customs legal decisions would show that legislative history is regularly given consideration more freely. A more realistic statement of the rule would be that legislative history may be resorted to to resolve the doubt created by any bona fide legal dispute created by a challenge to a Customs classification.

075518

612

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

HOLDING:

For the foregoing reasons, we find that the encapsulated isotope in question was properly classified under the provision for parts of apparatus based on the use of radioactive substances in item 709.66, TSUS. Therefore, you are instructed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Mr. Howard Wellman
Wellman Wearables, Inc.
7410 Worthington-Galena Road
Worthington, Ohio 43085

Dear Mr. Wellman:

In your letter of October 29, 1984, you asked for a tariff ruling concerning certain flock transfers. You submitted samples along with your inquiry.

The samples were consumed in laboratory analysis, but the New York Customs Laboratory advises us as follows:

> The sample is a rayon flock which has been applied to an adhesive paper substrate. The flock has been applied to the paper without the use of a printing process. The decorative portion of the flock, which can be transferred by heat and pressure onto a fabric, has been formed using a typographic adhesive printing process similar to gold leafing. In our opinion, the sample is neither a decalcomania nor a ceramic color.

It is our opinion that your samples are classifiable under the provision for other articles of flocked paper in item 256.87, TSUS, dutiable at the 1985 column 1 rate of 5.6 percent ad valorem.

Sincerely,

Arthur P. Schifflin

075538 JGB

075538

TO : Area Director of Customs
Newark, New Jersey 07114

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 121/84, Classification Continuous Cast Gold Rod (Your memorandum of November 1, 1984, File: ENT-1 N:C:D HH)

This request for internal advice was initiated on behalf of the importer by counsel in a letter dated September 27, 1984. Our decision follows:

ISSUE:

Whether the gold rod is "bullion" as provided in item 605.20, Tariff Schedules of the United States (TSUS), a duty-free provision, or whether it is "Gold, *** unwrought *** or semimanufactured: Other," as provided in item 605.28, TSUS, and dutiable at 12.6 percent ad valorem for entries made in 1983.

FACTS:

The importer buys refined gold from its related company in West Germany. In its condition as imported the gold is in the form of rod made by the continuous casting method. Rod made this way is distinguishable from ordinary drawn or extruded wire by rings or bands. These represent fluctuations as the gold rod goes through a circular die. The importer

A3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

075538

states that this process is relatively new, but that continuous casting in some form is becoming the predominant method of forming gold for commercial or industrial use because of lower costs.

LAW and ANALYSIS:

Counsel relies primarily on Jarrell-Ash Co. v. United States, 60 Cust. Ct. 65, C.D. 3261 (1968). The point made is that the instant rod is only a material having no particular value beyond the value of the gold itself. It is claimed that the form of this rod does not impart value to the mass.

Counsel also argues that the gold rods regarded as bullion in Jarrell-Ash, decided under paragraph 1638 of the Tariff Act of 1930, are sufficiently similar to the instant gold rod to require classification in item 605.20, since the meaning of bullion in paragraph 1638 is the same for item 605.20. To support this claim, counsel refers to page 133, of Schedule 6, Tariff Classification Study (1960), which it is contended shows an intention to continue the same dutiable status for bullion in the TSUS as existed under the repealed tariff paragraphs. However, this reference antedates Jarrell-Ash by several years and it is clear that under TSUS headnotes, rod of the type considered by the Jarrell-Ash court could not be considered as bullion under the TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A4

In interpreting the TSUS, we must look at the actual language of the provisions along with their accompanying headnotes. Therefore in comparing the competing provisions, items 605.20 and 605.28, we note that the superior heading to the latter includes semimanufactured products. If the instant rod is semimanufactured, this would require its exclusion from the bullion provision, a result mandated by the headnotes. "Semimanufactured" is defined by Headnote 2(b), Subpart A, Part 2, Schedule 6, TSUS, as referring to a "wrought" product including any in the form of bars, "rods", and sections. (Emphasis ours.) Judging from the descriptions provided, the goods being considered here are in the form of rods and nothing else. It is noted that the diameter of the rod may vary, but the overall form is not substantially less than a rod. Moreover, we would not regard the rod as unwrought, because Headnote 3(a), Part 2, Schedule 6, excludes extruded products.

In a supplemental letter dated February 26, 1986, as well as during the conference at Headquarters, counsel has argued vigorously that the product of continuous casting is not an extrusion within the meaning of the applicable headnotes, but instead results in a cast product. Counsel notes that the copper subpart (Subpart C, Part 2, Schedule 6) is governed by a headnote specifically requiring that continuous cast products of copper be classified as wrought products when

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

substantially comparable to and suitable for the same general purposes as wrought products. It is argued that the purpose of the headnote was to counter a general principle that products of continuous casting are unwrought. We disagree.

To the extent this argument constitutes an application of the expressio unius rule, such negative inferences are not to be drawn from headnote inclusions. See the Tariff Classification Study, Explanatory Materials, C.I.E. 1/64, Vol. 1, p. 18. In our opinion the copper headnote is simply a reflection of a lack of commercial significance for continuous casting methods for precious metals and other metals besides copper. It would have been unreasonable to include a headnote to cover a process that did not for practical purposes exist when the TSUS was drafted. In this connection, the comparatively recent development of continuous casting methods for gold is emphasized in counsel's submissions. In fact, we rather regard the copper headnote as supportive of the view that the treatment of any continuous cast product which is used as a semimanufactured product and not as an unwrought product would be a misconstruction of the TSUS.

Continuous casting does not create an unwrought product because the process is not true casting. The movement of the molten material through a die is more than a casting

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A6

075558

and certainly uncharacteristic of casting. In our opinion, the continuous casting extrusion qualifies the instant merchandise as a wrought product for the purpose of the headnote definition of "semimanufactured."

Counsel has made a final claim in his supplemental letter that there has been a continued reliance by Customs on the Bureau of the Mint definition of bullion and that to change that definition would require a change of practice. Further, it is argued "that a uniform practice existed prior to 1984 to classify bars, rods and plates of precious metal as bullion" and that published notice would be required to make any change in that practice.

The cited abstract, T.D. 66-169(9), does not constitute a publication the reliance on which could create a practice that may not be changed except through the change of practice procedures. 19 CFR 177.10(b). Accord, Borneo Sumatra Trading Co. v. United States, 56 Cust. Ct. 166, C.D. 2624 (1966). As for the Bureau of the Mint definition of bullion, the reliance on it in an unpublished ruling which concerned gold bar stock would not apply to the instant merchandise. Moreover, its use by counsel here would be inappropriate because interpretation under other laws are not controlling for tariff purposes. See, for example, United States v. Mercantil Distribuidora, S.A., 43 CCPA 111, C.A.D. 617 (1956).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

HOLDING:

It is not shown the Customs Service consistently classified any extruded gold product as bullion in violation of TSUS headnote requirements and thereby created a practice. The instant merchandise is classified in item 605.28, TSUS, as other semimanufactured gold. A copy of this decision should be sent to counsel for the importer.

075555

District Director of Customs
6th Floor, Plaza Nine Building
55 Erieview Plaza
Cleveland, Ohio 44114

Dear Sir:

Re: Decision on Protest and Application for Further Review of Protest No. 4101-4-000033, dated November 14, 1984.

This protest was taken against your decision on the liquidation on August 24, 1984, of entry no. 84-433226, dated April 13, 1984. The protest concerns the classification of 1, 4 dithiothreitol, also known as DTT.

ISSUE:

The importer claims that DTT is properly classified in item 428.4400, Tariff Schedules of the United States Annotated (TSUSA), the provision for "Other: Triols and Tetrols", bearing a rate of duty of 4.2 percent ad valorem (1984).

You have classified the merchandise in item 428.4780, TSUSA, the provision for "Other: Other [than Triols and Tetrols]", bearing a rate of duty of 12.3 percent ad valorem. The superior heading for both provisions is "Alcohols, polyhydric (including glycols, polyglycols, diols, and polyols), and esters, ethers, and ether-esters and substituted derivatives of any of the foregoing."

The issue as framed by the importer is whether substituted derivatives of triols and tetrols are classified under the triols and tetrols provision.

A9

FACTS:

The protestant claims that both by chemical structure and activity and by use and price, the instant merchandise does not fit into the included group of organic compounds under the "Other" heading of item 428.47. Therefore, it is argued, your classification is incorrect. It is noted, for example, that the instant merchandise is valued at over 400 times the value of the ether-type ethylene glycols (suffixes 10 through 40).

The second part of the argument is that the tetrol and triol classification is correct because the instant merchandise is derived from erythritol which, in turn, is a tetrol. The importer's argument in sum is that DTT does not belong in item 428.47, where you classified it, and that it does belong in item 428.44 with tetrols.

LAW and ANALYSIS:

The first part of the argument is only partially valid. The importer is apparently correct in noting the differences in cost of organic chemical compounds classifiable in item 428.47, statistical suffixes 10-40, compared to DTT, which you classify in suffix 80, the "other" provision. There is also, in view of the difference in cost, a different use, according to the importer.

The importer is employing a "use" analysis as well as a hybrid in pari materia analysis to make his first argument.

THIS DOCUMENT HAS BEEN RELEASED TO THE

015555

A10

Neither method of analysis is appropriate here because the superior heading quoted supra relies wholly on chemical structure for its boundaries, not upon use or upon "like chemicals." Suffix 70 of item 428.47 is a use description, for example, which is not relevant here, but the "Other" which describes the entire provision is not dependant on use. Also, there is no requirement in interpretation of the tariff schedules that all things grouped together be of similar price or value unless they are exemplars designed to give meaning or definition to such phrases as "or similar goods" or "of like kinds." No such tariff construction is involved here. In fact, the "other" provision found here allows the classification of polyhydric alcohols not provided for in the other provisions beneath this superior heading.

The second argument, that DTT as a derivative of a tetrol should be classified with tetrols, may be disposed of by an analysis of the superior heading, noting that the "substituted derivatives" language applies to "any of the foregoing" and not to "any of the following." This means that while substituted derivatives of polyhydric alcohols are included thereunder by name, such as triols and tetrols, is does not mean that within the item providing for tetrols, there may be classified a further derivative. Therefore, the instant merchandise may not be classified in item 428.44 as a derivative of a triol or tetrol because derivatives do

A11

DOCUMENT MAY BE RELEASED TO THE

not belong with the named chemical structure. Instead, a di-substituted derivative of a tetrol must be classified as an "other" when not otherwise provided for.

HOLDING:

The product 1,4-Dithiothreitol, also known as DTT, is classified in item 428.4780, TSUSA. You should deny the protest. A copy of this decision should be attached to the Form 19 to be returned to the protestant.

Sincerely,

Arthur P. Schaffner

CLA-2:CO:R:CV:G
075728 JLV
(074651 JLV)

M. Barry Levy, Esq.
Sharretts, Paley, Carter & Blauvelt, P.C.
Eighty Broad Street
New York, New York 10004

Dear Mr. Levy:

In your letter of February 15, 1985, you request reconsideration of our ruling of December 27, 1984 (file 074651). You agree that the article in question, a small electric motor and a series of speed-reducing gears enclosed in a special housing with 5 octagonal projections for connection to other components, is more than a motor. However, you state that the decision did not address classification of the article as a toy building block or shape in item 737.55, Tariff Schedules of the United States (TSUS). It is your opinion that there is a longstanding practice of classifying similarly constructed components of building systems in item 737.55, TSUS.

The component in issue is designed for use in Robotix™ motorized modular building systems. The octagonal projections are the points at which other building components are connected. The modular building systems are designed so that they permit the construction of many objects, limited only by a user's imagination. These objects include vehicles, cranes, robot-like beasts, combination articles, or even structures. The drive mechanism, however, [illegible] the only component under consideration.

You cite numerous administrative rulings in which we have ruled that motorized building kits, consisting of interlocking wheels, motors, brackets, blocks, rings, squares, battery, nuts, bolts, and various other shapes, are classifiable as toy building blocks, bricks, and shapes. However, these rulings address the classification of kits consisting of interlocking building blocks and related components, such as motors, wheels, and other "shapes" which, to the casual observer, do not appear to be within the tariff description for "building blocks, bricks, and shapes." However, in 1-2 Kangaroo, Inc. v. United States, 66 Cust. Ct. 474, C.D. 4236 (1971), the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A13

court held that interlocking squares, one-eighth of an inch thick, and hollow cylinders, two and one-quarter inches in diameter, were toy building blocks. In dictum, the court stated that if the squares and cylinders were not blocks, they would at least fall within the broader term "shapes." The operative language, in the court's opinion, was the fact that the types of articles to be considered in item 737.55 were "building" units. Therefore, if building blocks or shapes are not dedicated or subordinate to any use other than the building of objects, then such myriad shapes are properly classified in item 737.55, TSUS.

The Robotix™ kits are classifiable in item 737.55, TSUS. The narrow issues are whether the motorized shapes are "more than" building shapes and whether they are parts of building shapes. If the conclusion is "yes" to either question, then the motorized units would be precluded from classification in 737.55, TSUS. An article that is "more than" a named article is, very simply, not includable within the provision for the named article. Secondly, item 737.55 does not contain a parts provision.

The motorized units are identifiable building components that are utilized not for a given structural design, but as intermediate connectors that support a motor which provides driving power to another component. Nevertheless, they are specialized shapes used in building various objects. In this respect, their specialized function in the system is not relevant for tariff purposes. Therefore, the motorized units are not more than building shapes within the meaning of item 737.55, TSUS.

The remaining question is whether or not the motorized units are only "parts" of building kits. If the articles provided for in item 737.55 were described as "building blocks in kits," or "building kits," then this question would be relevant. The use of the plural terms "blocks" and "shapes" is not sufficient for us to conclude that the intent was to provide for kits. Therefore, a single building block or shape would be classifiable in item 737.55. Specialized shapes designed for use as building components are not different, for classification purposes, from basic bricks or blocks. The motorized units, which are specialized connectors for Robotix™

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

075728

N14

building kits, are building shapes within the meaning of 737.55, TSUS, and, even though they are never used without other special shapes, they are not precluded from classification as building shapes solely because they could otherwise be characterized as "parts" of a kit.

Upon reconsideration of the ruling of December 27, 1984 (file 074651), we amend that decision in light of the conclusions in this letter. Therefore, the motorized units for the Robotix™ kits are classified as building shapes in item 737.55, TSUS.

075793

District Director of Customs
Minneapolis, Minnesota 55401

Dear Sir:

Re: Decision on Application for Further Review of Protest 3501-4-000015, on the Classification of Perfluorooctanoil Fluoride

"Perfluorooctanoil fluoride, FMZ-4049" is described as the waste resulting from the production of perfluorinated octanoic acid. "FMZ 4049" is said to be a flourinated ether alicyclic halogene derivative. The petitioner claims the imported material would have to go through a number of purification processes before it could be used to manufacture other fluorinated products.

The issue is whether the imported product is a waste in item 793.00, TSUS, or an ether of a monohydric alcohol in item 428.96, TSUS. The answer to whether it is waste will be determined by whether it is fit only for remanufacture or whether it is a useful by-product. Subsequent to importation the product must be processed before it can be used in the production of other chemicals. It is stated that to make a usable product it would have to go through a number of processes including boiling/distillation to remove impurities. It is claimed that only then could it be used in the manufacture of other fluorinated products. Such processing, it is stated, includes distilling to remove residual substances and to separate the lot into portions each having a narrow enough boiling range for uniform treatment. Fractions are then stabilized at elevated temperatures under pressure with a strong base, either molten or in solution, depending on the requirements of the intended product. Next the product is azeotropically distilled from the reactor and fractionally distilled into portions meeting the volatility specifications of the final product. The fractions are then further purified by treatment under heat and pressure with soluble oxidizing agents, filtered, washed with solvent and water, then decanted.

The stabilized material is passed through a chromatographic column to remove remaining polar contaminants and blended into a commercial product.

The processing undergone by the imported "FMZ 4049" shows that the original product, perfluorinated octanoic acid, is not recovered. The elaborate processing which the imported material undergoes involves a sequence of chemical reactions, separations and blending, which indicates that the imported material is used as a raw material to produce various organic fluorine compounds, or remanufactured to recover a variety of chemicals used in the synthesis of other chemicals.

B2

Therefore, as the imported material was not used for its original purposes but for remanufacture into totally different products, it is a waste for tariff purposes and classifiable in item 793.00, TSUS.

You are directed to allow the protest in full. A copy of this decision should be included with your Form 19 Notice of Action.

Sincerely,

Arthur P. Schifflin

SUBJECT: Your Request to Modify New York Ruling 810122

Your memorandum of March 4, 1985, requests Headquarters to consider modifying your ruling no. 810122, dated November 8, 1984. The ruling provided tariff classifications and textile category designations for six girls' and infants' coats for Hong Kong.

Upon review of the sample, we concur in your conclusion that part of ruling no. 810122, pertaining to style 5271, is wrong and that ruling no. 810122 should be modified. Therefore, we have modified the ruling to show the correct classification and textile category designations and have attached a copy for your reference.

CLA-2 CO:R:CV:G
075796 JGB
810122

Mr. Duncan A. Nixon
Sharretts, Paley, Carter &
Blauvelt, P.C.
80 Broad Street
New York, New York 10004

075796

Dear Mr. Nixon:

You requested a ruling on behalf of Paramount Apparel in your letter dated July 12, 1984, to the Regional Commissioner of Customs in New York. That letter was answered in a ruling issued November 8, 1984, bearing New York ruling number 810122. The ruling covered six styles of girls' or infants' coats expected to be imported from Hong Kong.

It has been brought to our attention that the determination of proper tariff item and rate of duty for one style number is incorrect in that ruling. Therefore, in accordance with the provisions of 19 CFR §177.9(d), this letter modifies that ruling with respect to style 5271.

Style 5271 was classified in item 383.3446, Tariff Schedules of the United States Annotated (TSUSA), if in chief value of cotton and in item 383.9041, TSUSA, if in chief value of man-made fibers, as other girls' or infants' wearing apparel, not ornamented. A sample of the coat was submitted.

A feature of the coat is a flange that extends about 1-1/2 inches over the shoulders. The flange has contrasting piping less than 1/4-inch at the edge. The flange has six rows of parallel stitching along the length of the flange, visible from both sides of the flange.

An examination and removal of this stitching discloses that the parallel stitching is quilting stitching designed to hold fill in place. An examination of the construction of the flange, itself, shows that apparently it was constructed of material that was sewn together to form a single piece and then folded and sewn down in place along the resulting seams. In such construction a tuck is created.

MAY BE RELEASED TO THE PUBLIC

35

This office has repeatedly noted that this sort of tucking is included in the examples of ornamentation in Headnote 3 to Schedule 3 of the TSUSA. This principle is evident and controlling in our recent rulings: 075951 EMS, dated June 19, 1985, and 076622 EMS, dated August 6, 1985. It is also noted in 069967 PR, dated February 18, 1983, and 065137 PR, dated December 12, 1980.

In the application of the foregoing, if in chief value of cotton, style 5271 is currently classified in item 384.0509, TSUSA, with a rate of duty of 19.6 percent ad valorem. If in chief value of man-made fibers, it is classified in item 384.2318, TSUSA, with a rate of duty of 32.1 percent ad valorem. The textile category designations 335 and 635 remain unchanged.

This ruling modification is effective as of the date of this letter, except that import specialists may accept entries of this style at the correct duty rate for not ornamented, if it be shown by written documentation that the merchandise being entered was on order before the date of this ruling modification.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

FROM : Director, Classification and Value Division

SUBJECT: Tariff Classification of Modems (Your Memorandum of March 7, 1985, CLA-2-06:S:COM:NI-109-198)

In your memorandum you refer to our difference decision of July 18, 1983, file No. 067986, in which we classified modems under the provision for parts of office machines in item 676.52, TSUS. Since that position appears inconsistent with our usual treatment of remote computer terminal equipment, you indicate a distinction is being made on the basis of the distance the data is transmitted.

The identified previous decision was based on the belief that the modem in that matter was similar to the transmission apparatus which we classified under item 676.52 in our decision of January 27, 1975, file No. 035416. While the file for that earlier matter is no longer available, it is obvious from the description of the merchandise in the copy of the decision you provided that it was not a modem, but rather transmitted data in digital form over comparatively short distances not using public telephone or similar analog data transmission carriers.

Accordingly, modems generally will continue to be regarded as classifiable under the provision for parts of terminal apparatus in item 684.66, TSUS, without reference to specific transmission distance capabilities. Transmission equipment which as a class or kind handles data in digital form without modulation, usually within a single building or complex and not to remote locations, will not be regarded as telegraph apparatus.

1 E. Bay Street
Savannah, Georgia 31401

FROM : Chief, General Classification Branch

SUBJECT: Request for Internal Advice 123/84 Concerning the Determination of Component Material in Chief Value Where Adhesives are Used (Your Memorandum of October 31, 1984, File: MAN-1-C&V WDW)

The subject IA request was initiated by the importer in a letter dated September 28, 1984. In this matter, the IA applicant requests information as to whether overhead and other expenses beyond direct labor costs may be subtracted from the value of a plastics/rubber component of footwear supplied to the final assembler by a separate manufacturer. Under the rule in Turner & Co. v. United States, 12 Ct. Cust. Appls. 48, T.D. 39997 (1924), the price actually paid to a manufacturer of a component by a final assembler must be taken as the value for cost comparison purposes even though the compared in-house incurred material costs may include fewer cost factors.

Another question has arisen as to whether the costs of adhesives may be subtracted from the component manufacturer's price for the rubber/plastics subassembly. It is our position that the cost of the adhesive may be subtracted from the rubber/plastics cost based on a ruling from this office which held in effect that cost of cement whose principal constituent element was rubber/plastics could not be allocated to rubber/plastics cost in a component material determination but was a separate component material in itself. See Vandergrift Forwarding Co. v. United States, 37 Cust. Ct. 18, C.D. 1793 (1956).

District Director of Customs
Chicago, Illinois 60603

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3901-4-000843, on the Classification of Certain Reagent Chemicals

FACTS:

Quicklyser-HB, Placheck-100, Quicklyser, Histan, and Cellkit, products of Japan, are described as certain chemical reagents and diluents used with hematologic analyzing machines.

Cellkit-CD is described as a diluent, composed of sodium compounds with buffer.

Quicklyser is said to contain the benzenoid compound polyethylene glycol mono-p-iso-octyphenyl ether in the amount of 3.5 percent. The function of the Quicklyser is to lyse red blood cells. The benzenoid compound is to act as a white cell stabilizer after the lyzing has occurred. Placheck 100 is referred to as a reference material for platelet counts. It is described as having latex particles which enable the user of an automated hematologic analyzer to evaluate the instrumentation with respect to the parameters for platelet counts. The active ingredients are said to be latex particles plus a phosphate buffer. It is also said to contain a benzenoid compound, polyoxyethylene octylphenyl ether, in the amount of 0.1 percent as a dispersant.

Histan #HS10 is described as a chemical product used for evaluating hematologic analyzing equipment. The active ingredients are said to be potassium cyanide compounds used to form cyanmethemoglobin, as well as a

B9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

phosphate buffer. It is said to contain a benzenoid ingredient to the extent of 2.5 percent, which acts as a supplemental agent for the antiseptic and as a builder for bovine hemoglobin.

ISSUE:

While Customs classified these products as benzenoid mixtures in item 413.51, TSUS, it is contended in behalf of the importer that most are chemical mixtures in item 432.25, TSUS. Cellkit CD, it is alleged, is a sodium compound in item 420.96, TSUS.

LAW AND ANALYSIS:

In determining the applicability of the de minimis rule in regard to benzenoid mixtures, it is not only the minute quantity involved but also the function of the benzenoid ingredient which is considered. If the benzenoid is present in a minute amount and does not play a part in the principal function, consideration would be given to the de minimis concept. Under this test, these products are classified as follows:

(1) Cellkit CD contains sodium chloride, hydrated sodium hydrogen phosphate, potassium dihydrogen phosphate, polyvinyl alcohol, dipotassium salt of ethylenediaminetetraacetic acid, and 8-hydroxyquinoline, a benzenoid compound constituting 0.02 percent of the reagent. It acts as antiseptic. In view of the small amount of this benzenoid and that it does not aid in the principal function of the reagent (a blood diluent), the benzenoid component is de minimis and Cellkit CD is classifiable as a mixture in item 432.25, TSUS.

(2) Quicklyser HB #QL22 and QL20 are reagents used in hemoglobin estimation and, in addition to stabilizing white cells, they lyse (disintegrate) red blood cells. They contain 3.5 percent polyethylene

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B10

glycol mono-p-isooctylphenyl ether, a nonionic benzenoid surface active agent. The benzenoid surface active agent plays an essential and continuous role in the primary function of the reagents, hemoglobin estimation. The white blood cells appear to require stabilization for accurate hemoglobin estimation and without the stabilizer the reliability of the test would be questionable at best. These reagents are classifiable as a benzenoid mixture in item 413.51, TSUS.

(3) Placheck 100 is used in calibrating automated hematologic analyzers. The benzenoid component is present in the amount of 0.1 percent. It is a dispersant that keeps the latex particles in suspension so that the instrument may be accurately calibrated. Since the primary function of the Placheck 100 is calibration, and the calibration requires suspended latex particles, the benzenoid dispersant is essential to the primary function of the reagent. Therefore, Placheck 100 is classifiable as a benzenoid mixture in item 413.51, TSUS.

(4) Histan #HS10, is variously described as a "builder for bovine hemoglobin," a hemoglobin reference control, and as a chemical for evaluating hematologic analyzing equipment. It is a mixture which contains two benzenoid compounds, beta-phenethyl alcohol and polyoxyethylene alkylphenyl ether, constituting 0.225 and 2.0 percent of the product, respectively. Beta-phenethyl alcohol is an antiseptic and plays no part in the primary function of the product, so that it is considered de minimis. However, the other benzenoid is a dispersant which is essential to the principal function of the reagent, which is to act as a reference standard. Histan, too, is classifiable in item 413.51, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B11

075435

HOLDING:

You are directed to deny the protest in full. The protest as to the product Cellkit CD is denied as to item 420.96, TSUS; it is classifiable in item 432.25.

Sincerely,

Arthur P. Schaffner

District Director of Customs
477 Michigan Avenue
Detroit, Michigan 48226

Re: Decision on Protest and Application for Further Review of Protest No. 3801-4-000805, Dated May 8, 1984

Dear Sir:

The above protest and application for further review were timely filed against your action in which you assessed duty on sodium dichromate dihydrate in aqueous solution under the column 2 rate as a product of the U.S.S.R. The merchandise was entered at Detroit on entries numbered 83-463483-3, dated June 23, 1983, and 84-446699-4, dated November 21, 1983, which were liquidated on March 2, 1984, and February 8, 1984, respectively. This ruling is our decision on the issue.

FACTS:

The imported product is sodium dichromate dihydrate in aqueous solution. This product is the result of various processing operations performed in Canada on anyhydrous sodium dichromate produced in the U.S.S.R.

The processing in Canada consists of the following: screening the dry, solid chemical to increase its hydroscopic [sic] character; mixing with water and agitating to insure complete liquification; and filtering to separate foreign material and unliquified sodium dichromate from the sodium dichromate dihydrate.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B13

The sodium dichromate dihydrate may be in solid form or in aqueous solution. The anhydrous chemical is always in solid form. The products are identified as follows:

$Na_2Cr_2O_7$	Anhydrous Sodium Dichromate (solid)
$Na_2Cr_2O_7 \cdot 2H_2O$	Sodium Dichromate Dihydrate (solid)
$Na_2Cr_2O_7 \cdot 2H_2O$	Sodium Dichromate Dihydrate (in solution)

Protestant states that the changes from the anhydrous form to the dihydrate form in solution are both chemical and physical, and that they constitute a substantial transformation. The two solid forms are said to be unusable in those forms by manufacturers who use the chemical.

ISSUE:

The sole issue is whether or not the processing operations performed in Canada effect a substantial transformation of the anhydrous sodium dichromate into a new and different article which, for purposes of assessment of duty, is a product for Canada.

LAW AND ANALYSIS:

In a recent judicial opinion, the court held that the physical removal by evaporation of a percentage of one chemical compound from a mixture of compounds resulted in a substantially transformed residual substance. The Upjohn Company v. United States, ___ CIT ___ (Slip Op. 85-123,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B14

075836

November 27, 1985). In relying on the decision in Shell Oil Co. of Canada, Ltd. v. United States, 27 CCPA 94, C.A.D. 68 (1939), the court noted that the residual substance resulted from the processing of the basic material in order to separate the pure form of one of the chemical compounds in the mixture. The intended "pure" chemical compound and the resulting "residual" mixture of compounds were both held to be new and different articles and, therefore, products of the country in which the processing took place.

Substantial transformation issues involving chemicals have always presented difficulties because minimal processing may often result in a product that has distinctive characteristics, uses, or, especially, different names. In The Upjohn Co., supra, the chemical products were known as crude 390 HOP, from which crude BLD (the residual product in issue) and pure MDI were processed. The physical process of evaporation resulted, in pertinent part, in crude BLD which differed from crude 390 HOP in isocyanate equivalents, percentages of pure MDI, triisocyanate and higher molecular weight structures. This "change in condition" was material to the court's decision.

In this case, counsel for the protestant has cited numerous administrative decisions, published and unpublished, as authority that the mixing of a concentrated or commercially distinct product with water does result

C1

in a substantial transformation: CSD 79-339; CSD 79-349; CSD 79-92; T.D. 77-273; ruling letters of May 4, 1977 (file 707084); August 17, 1979 (file 710823); June 16, 1980 (file 711553); November 12, 1980 (file 714319); and June 16, 1978 (file 055562). There are decisions, however, that arrive at contrary conclusions: ruling letters of November 5, 1979 (file 711651); February 23, 1977 (file 048940). These decisions lead to the well-recognized principle that each substantial transformation issue must be determined on its own set of facts. Uniroyal, Inc. v. United States, 3 CIT 220, at 224 (1982). Prior decisions are instructive, but are not necessarily conclusive.

Concerning the merchandise in issue, counsel states that the processing performed in Canada is a manufacture or production resulting in a chemical and physical conversion from an anhydrous solid to a hydrated chemical in solution which has a higher molecular weight. Users of sodium dichromate dihydrate (in solution) cannot process or substitute anhydrous sodium dichromate. This difference in appearance, chemical structure, and use is, in the opinion of protestant's counsel, sufficient for a finding of a substantial transformation. For the reasons discussed herein, we disagree.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

078836

C2

The language of the court in Uniroyal, supra, is relevant. At issue was whether or not imported shoe uppers were substantially transformed by the addition of a sole for purposes of country of origin marking requirements. In its opinion, the court stated the following:

> . . . On the other hand, if the manufacturing or combining process is merely a minor one which leaves the identity of the imported article intact, a substantial transformation has not occurred. . . . (page 224)

Although the processing operations were set forth in detail, essentially they consist of a screening, mixing with water, and filtering to form sodium dichromate dihydrate in an aqueous solution. The essential nature of the chemical, sodium dichromate, remains intact. Technical information on the anhyrdrous and dihydrate forms does not identify any significant differences between the forms, and, therefore, supports a conclusion that there is no difference in the fundamental identity of the chemical.

Not every processing operation which changes a "producer's" article to a "consumer's" article is a substantial transformation. Uniroyal, Inc., supra; National Juice Products Association, et al. v. United States, __CIT__ (Slip Op. 86-13, January 30, 1986). Hydration does involve chemical bonding forces. However, the hydration processing has not been demonstrated to be a substantial processing

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

075836

C3

operation. It is a basic mixing operation that, as indicated earlier in this decision, does not result in a chemical product that is fundamentally different in name or character.

Assuming that protestant's counsel is correct in stating that the users of sodium dichromate are unable to utilize the solid form, whether anhydrous or dihydrous, we do not consider this to be controlling. This reflects a change in use based on characterization as a "producer's good" and a "consumer's good." However, as noted in Uniroyal and National Juice, this kind of change in "use" is not determinative of a substantial transformation issue. The relevant fact in this case is that the essential chemical nature of sodium dichromate remains the same. The decision in The Upjohn Company, supra, is distinguishable on the basis that the court considered that the change in condition of the residual product was material and, therefore, precluded consideration as U.S. goods returned under item 800.00, TSUS.

HOLDING:

The processing of anhydrous sodium dichromate to sodium dichromate dihydrate in solution is not a substantial transformation. Therefore, the country of origin remains

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

075836

C4

that of the anhydrous sodium dichromate. The protest should be denied in full. A copy of this decision should be given to the protestant at the time notice of action is given on Customs Form 19.

Enclosed is the original Customs Form 19, which was submitted to this office with the request for further review.

Sincerely,

Arthur P. Schaffer

District Director of Customs
Detriot, Michigan 48226-2568

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3801-5-000054, on the Classification of Product 11003-12 White

The product, 11003-12 White, consists of 47.5 percent titanium dioxide, 20.0 percent calcium carbonate and 32.5 percent linear low density polyethylene. The product was entered under the provision for other pigments, not specially provided for, not containing lead, in item 473.88, TSUS. You classified the product under the provision for pigments containing titanium in item 473.70, TSUS.

Protestant asserts that classification should be under the provision for other pigments in item 473.88, TSUS, but offers no reasons for this classification. It is assumed protestant reasons that the presence of calcium carbonate causes the requested classification.

Headnote 1, Part 9(B), Schedule 4, TSUS, states that the term "pigments" includes fine solid particles or powder, in dry form, in pulp, or ground in or mixed with oil, water, or other vehicle, commonly known as pigments and suitable for use in imparting color. The product meets this definition. Inasmuch as it contains titanium dioxide it is classifiable in item 473.70, TSUS. Calcium carbonate is listed as a commonly used filler and extender for plastics, and is a common pigment extender which enhances the action of white pigments such as titanium dioxide. Thus, its presence in the imported product does not require classification elsewhere than as a titanium pigment.

You are directed to deny the classification issue in full.

As to the value question concerning the deduction of Canadian freight, a deduction of Canadian inland freight is allowed when separately identified and when occuring after the merchandise has been sold for export to the United States and placed with the carrier for through shipment to the United States.

Sincerely,

Arthur P. Schifflin

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3901-4-000227, Classification of Dicopac Testing Kit, Produced in England

Dicopac, a diagnostic testing kit, consists of a capsule of cyanocobalamin Co-58, a capsule of cyanocobalamin Co-57 bound to human gastric juice (intrinsic factor), two vials of cobalt 57 standard and cobalt 58, plus an ampoule of unlabelled cyanocobalamin in an isotonic saline solution for muscular injection. The kit is said to be used solely for in vivo diagnosis of Addisonian (pernicious) anemia and also as a diagnostic adjunct in detecting defects of intestinal absorption. The kit is designed to test the malabsorption of vitamin B_{12} in the body. Each kit contains multiple sets of components sufficient to perform a specific number of tests.

Both capsules (cyanocobalamin Co-57 and cyanocobalamin Co-58) are administered orally to the fasting patient. Two hours after the radioactive capsules have been administered, an injection of nonradioactive vitamin B_{12} is given. Over a 24 hour period urine is collected and analysed, with the resulting data being used to calculate the percentage excretion of each radionuclide and the ratio of each to the other. The purpose of the kit is to detect those deficiencies within the human body which prevent the absorption of vitamin B_{12}.

It is conceded that the kit is an entirety within the meaning of the term, as the function, use, and design of the kits show that the various components are subordinated to the commercial identity and purpose of the kit itself. Donalds Ltd. v. United States, C.D. 1619 (1954).

In behalf of the importer it is contended that it is classifiable under the provision for "viruses, therapeutic serums, vaccines, toxins, antitoxins and analogous biological products, human blood and fractions thereof, human skin and bone grafts, and other anatomical parts of the human body prepared for diagnostic or therapeutic purposes," in item 437.76, TSUS. The port believes the kit is classifiable under item 799.00, TSUS, as a nonenumerated article. Customs has held in similar cases that the legislative history shows that item 437.76 does not require a product to consist wholly of a biological substance to be classifiable therein. Such a conclusion was believed consistent with Certified Blood Donor Services, Inc. v. United States, C.A.D. 1147 (1975).

c1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The component of the kits which is clearly of biological origin is the human gastric juice (intrinsic factor) to which cyanocobalamin Co-57 is bound. Since the purpose of the kit is diagnostic: used to detect pernicious anemia and as an adjunct in determining other intestinal absorption defects, it is considered an analogous biologic product, following Certified Blood Donor Services.

The product is therefore classifiable in item 437.76, TSUS.

You are directed to allow the protest in full.

A copy of this decision should be included with the Form 19 Notice of Action.

Sincerely,

Arthur P. Schaffner

District Director of Customs
Baltimore, Maryland 21202

Dear Sir:

Re: Decision on Application for Further Review of Protest 1303-4-000107, on the Classification of Diethyl-M-Toluamide, a Product of West Germany

The imported product, N,N-Diethyl-M-Toluamide (Deet) was entered under the provision for other (benzenoid) cyclic organic chemicals in item 405.34, TSUS. Customs changed the classification to the provision for products provided for in the chemical appendix to the tariff schedules (CAS), item 405.33, TSUS.

The chemical appendix to the tariff schedules is the list which contains the chemical abstract service numbers (CAS) for chemicals and products determined to have been imported into the United States before January 1, 1978, or produced in the United States before May 1, 1978. The chemical appendix lists a CAS registry number for N,N-diethyltoluamide (26545-51-7) but not the one in issue, the meta form (134-62-3). It is the port's position that even though the CAS number listed in the appendix is not the one for the imported product, it is the only one listed in the appendix, so that if that number does not apply to the imported product none will, as the meta form is the only commercial form of the product.

The only CAS number listed in the appendix for this chemical is 26545-51-7. The Chemical Abstracts Service, however, lists in addition to N,N-diethyl-toluamide (26545-51-7), N,N-diethyl-M-toluamide (134-62-3), N,N-diethyl-P-toluamide (2728-05-4), and N,N-diethyl-O-toluamide (2728-04-3). The N,N-diethyl toluamide which is listed in the appendix to the tariff is described as a structure which is only partially defined.

Therefore, the argument for listing the meta form under the registry number appearing in the chemical appendix is that since the latter is only partially defined, any form of the chemical may be said to be intended to be covered by using that number.

In the introduction to the 2-volume "Chemicals and Products Provided for in the Chemical Appendix to the Tariff Schedules" (USITC Publication 1073), it is noted that any single chemical frequently moves in commerce under a number of different names including trade names, so that by identifying the chemical by a CAS registry number, the specific chemical

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C9

gains an identity which has world wide acceptance and use. In another explanation by the American Chemical Society, it is pointed out that each definable chemical entity is assigned a verified registry number, and that each CAS registry number designates a single substance.

In a letter from an official of the Chemical Abstracts Service, it is stated that the CAS registry number (134-62-3) is the correct form to use for the specific isomer (N,N-diethyl-M-toluamide); and that the registry number (26545-51-7) is the correct one for the non specific isomer (N,N diethyl toluamide). Furthermore, it is noted that this number should be used only if (a) the identity of the specific isomer is unknown or (b) the material is indeed a mixture of the isomer. The letter concludes that the CAS registry number (26545-51-7) is incorrectly used for the specific isomer N,N-diethyl-M-toluamide.

In the explanation to the Chemical Abstracts published by the American Chemical Society, it is pointed out that each chemical entity is assigned a permanent computer-generated and verified number. The example given is D-Aspartic acid, L-Aspartic acid and DL-Aspartic acid, each of which has a specific registry number, along with aspartic acid of unspecified stereo chemistry which also has its own registry number.

In view of the express language of Headnote 1 to the chemical appendix to the tariff schedules to follow the CAS registry number system and the fact that each of the isomers - ortho, para as well as meta - has its own number, it is concluded that the form of the chemical listed in the appendix is intended to cover non specific isomers or mixtures of the isomers, and not the meta form.

Therefore, N,N-diethyl-M-toluamide is classifiable in item 405.34, TSUS.

You are directed to allow the protest in full.

A copy of this decision should accompany your Form 19 Notice of Action furnished to the importer.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Curtis D. Spencer
The Houston Foreign Trade
Zone Corporation
1717 East Loop, Suite 120
Houston, Texas 77029

Dear Mr. Spencer:

In your letter of March 26, 1985, you requested a ruling on whether or not certain processing operations on pipe would result in a substantial transformation. It is your position that the processing does not substantially transform the pipe.

The processing, as described in a letter attached to your request, consists of upsetting and heat treating specialty tubing and drill pipe. The pipe, at the time of importation into the FTZ, will be plain-end green tubes described as C-75 tubing and G-105 drill pipe. C-75 is a corrosion-resistant grade; the G-105 has higher strength but is more susceptible to corrosion.

Upsetting of the pipe and tube does not result in a substantial transformation. The principles in our ruling of March 15, 1985 (file 075174), copy enclosed, apply. In a subsequent ruling letter of November 21, 1985 (file 553739), copy enclosed, we held that upsetting, threading, and heat treatment by quenching and tempering substantially transformed green tubes for purposes of the Caribbean Basin Initiative. We note that the heat treatment was an essential processing operation that distinquished multifunctional green tubes from the oil country tubular goods that had a critical high yield strength and tensile strength required by A.P.I. specifications. Therefore, if the heat treatment (normalizing and tempering) to be performed in your case results in the same change from a multifunctional green tube, then the processing of upsetting and heat treatment would be a substantial transformation.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Harold I. Loring
Grunfeld, Desiderio, Lebowitz
& Silverman
Suite 2238
2 World Trade Center
New York, New York 10048-0654

Dear Mr. Loring:

This letter is in response to your memorandum of law dated September 12, 1985, supplementing a request for a ruling from your client, Mamiye Brothers, Inc., pertaining to children's two-piece garments that are physically attached.

The practical issue is whether the two-piece garments your client expects to import are dutiable separately or whether they are classified in a single tariff item to qualify for a single quota category. The legal issue presented is whether the enactment of Headnote 3, Part 6, Schedule 3 of the Tariff Schedules of the United States Annotated (TSUSA) bears on the classification of children's two-piece garments known as playsuits, and if not, whether the instant merchandise, claimed to be playsuits, are classified as an entirety.

The Congress enacted the new headnote described as part of the Trade and Tariff Act of 1984, Pub. L. 98-573. We have noted that the general effect of this new law was the elimination of most commercial tests for the existence of an entirety in wearing apparel. HRL 075048.

Excepted from the reach of this new headnote in paragraph (b) were "(i) suits, (ii) pajamas and other nightwear, (iii) playsuits, washsuits, and similar apparel, (iv) judo, karate, and other oriental martial arts uniforms, (v) swimwear, and (vi) infants' sets designed for children who are not over 2 years of age." Of pertinence in the instant inquiry is sub-paragraph (iii): "playsuits, washsuits, and similar apparel." This exception makes the classification principles applicable to playsuits, washsuits and similar apparel remain as they were before the enactment of the new headnote. The standards for determining whether two garments were classified together under the tariff include reference to Customs Textile Category Guidelines (CIE 36/79), the way the garment(s) are known and marketed, their use, the construction design and composition of the garments, and the way they may be worn together. In short, the "old" entireties rules for wearing apparel still apply when Customs evaluates two garments claimed to be a playsuit. These rules have always required an evaluation of several factors before they yield a result, so they do not consist of a formula to be applied mechanically.

C2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

You aptly set forth in your memorandum an explanation of the factors that have traditionally been considered in making a determination on an entirety. An examination of the samples submitted against these standards will determine whether they fall into the playsuit exception.

The sample provided with your client's letter of January 30, 1985, (N.Y. file 812168) is a shortall and short sleeve shirt set. The set has no style number. The shortall is composed of all cotton woven twill fabric and has self-fabric suspenders permanently sewn to the back of the elasticized waistband. The suspenders button to the bib front of the shortall. The shortall has a printed nursery rhyme motif on the bib which is repeated on the sleeves of the shirt.

The short sleeve shirt is 60 percent cotton and 40 percent polyester knit fabric. The shirt has capping at the neck and sleeve edges, a snap closure on one shoulder and a hemmed bottom. A fabric loop is inserted in both shoulder seams. The two garments are intended to be worn together with the suspenders of the shortall threaded through the shoulder loops on the shirt.

The importer indicates that the shortall and shirt will be imported together in toddler sizes 2-4T and in infants sizes 3-9 months and 12-24 months.

This combination meets the traditional standards for playsuit and entirety. The parts are imported as a unit and are said to be bought and sold as a unit. The parts are coordinated in design and when worn are physically attached by means of the suspender being threaded through the loops on the shirt. The design features are functional in that the suspenders support the bib front, while the shirt, in turn, keeps the suspenders from falling over the shoulders. The shortall may certainly be worn alone, but that is not its intended use. Moreover, when worn with the shirt, the combination of the two parts of the playsuit with its coordinated colors and pictorial motif become a new article of commerce. In that respect it is more than just the combination of two separate garments.

This playsuit in toddler sizes 2-4T is classified as "other women's, girls', or infants' wearing apparel, not ornamented: Of cotton: Not knit: Other (including coveralls, jumpsuits, and similar apparel) [;] Coveralls, overalls, jumpsuits and similar apparel; other playsuits, washsuits, sunsuits and similar apparel: Other: Other: Infants'" in item 384.5233, TSUSA. This provision takes quota category number 337 and bears a rate of duty of 9.4 percent ad valorem (1986). The infant sizes (3-9 month and 12-24 months) are classified in the same provision and take the same quota category and rate of duty.

Re: Decision on Protest and Application for Further Review of Protest No. 3801-5-000210, Dated October 24, 1984

Dear Sir:

The above protest and application for further review were timely filed against your action in classifying certain fasteners as screws in item 646.60 and 646.63, Tariff Schedules of the United States (TSUS), depending on the size of each fastener. The merchandise was entered at Detroit on Entry No. 84-623857, dated October 11, 1983, liquidated on August 10, 1984. This ruling is our decision on the classification issue.

FACTS:

The fasteners consist of threaded fasteners that were manufactured to meet National Aerospace Standards numbered NAS 6303 to 6320, NAS 6203 to 6220, and NAS 5000 to 5006. NAS 1103 to 1120 is also indicated, but is similar to or was replaced in design by NAS 6203 to 6220. Samples were submitted. The submissions by you and by the protestant do not address the specific configurations and sizes of such fasteners. You address the salient facts: (1) the NAS standards determined the construction, and (2) the imported fasteners do not have any of the special optional features (cotter pin hole; locking element; lockwire hole in head).

A fastener for standard NAS 6303 (through 6320) is described in the specification as "Bolt, Hex Head, Close Tolerance, A-286, Self-Locking and Nonlocking"; for Standard NAS 6203 (through 6220), it is described as "Bolt Hex Head, Close Tolerance, Alloy Steel, Self-Locking and Nonlocking"; and for Standard NAS 5000 (through 5006), it is described as "Bolt, Pan Head,

D1

Close Tolerance, Short Thread, Tri-Wing® Recess, Alloy Steel, Self-Locking and Nonlocking." All of the fasteners have washer faces.

The protestant claims that the imported fasteners, identified by the above standards, are classifiable as bolts regardless of whether or not they are manufactured with one or more of the optional locking characteristics. It is your position that, absent an optional locking feature, these threaded fasteners with washer faces are screws because they are designed to be torqued from the head.

ISSUE:

Whether threaded fasteners, if designed so that they can be used in a pretapped hole and can be tightened by torquing the head, are classifiable as screws even if they can also be used with a nut?

LAW AND ANALYSIS:

The tariff classification of a threaded fastener is determined primarily by its design characteristics and not necessarily by the chief service application or the trade name given by a manufacturer or seller. A threaded fastener, designed to be tightened by torquing the head, has been considered a screw both for tariff purposes and for commercial purposes. Unless an additional feature, such as a lockwire hole in the head or a cotter pin hole in the threaded end, has been added to dedicate a fastener for use with a nut, it would be classifiable as a screw.

We see no compelling reason to change the criteria for the tariff classification of threaded fasteners as screws or bolts. In this case, the fasteners are capable of being tightened by torquing the head, they have a washer face, and they lack any special design feature that would dedicate them for use with nuts. Our ruling of January 7, 1965 (file TC 424.411 AS), abstracted as T.D. 56535(42), is not contrary to this position because

D2

THIS DOCUMENT MAY BE RELEASED TO THE

075967

the background information to that decision indicated that the threaded fasteners were in fact drilled at the threaded end for use with a cotter pin to prevent a nut from loosening.

HOLDING:

The threaded fasteners, designed so that they can be tightened by torquing the heads and lacking any optional feature which would dedicate them for use with nuts, are classified as screws in items 646.60 and 646.63, TSUS, depending on the size of the shanks or threads. The protest should be denied in full. A copy of this decision should be given to the protestant at the time notice of action is given.

Sincerely,

Arthur P Schaffner

076004

This ruling concerns the tariff classification of a certain jacket with a down liner.

ISSUE:

The issue presented by the submitted sample is whether the down liner is classifiable as an entirety with the jacket it accompanies or whether the jacket and liner are separately classifiable.

FACTS:

The submitted sample consists of a lightweight man's lined jacket with a down-filled liner that is attached by means of a zipper. The outer jacket has a zippered full front opening, a standup buttoned collar, knit cuffs and waistband, and a large patch pocket on the inside of the garment with a Velcro-type fabric closure. Each front quarter panel has a horizontal opening chest area pocket with a zipper closure and a lower slash pocket with a buttoned flap closure. The outer shell is of a woven fabric, labeled to be cotton cambric, and the lining is a lightweight woven man-made fiber fabric. The sleeves and front quarter panels have been pieced together in such a manner that there are seams that extend almost the entire width of those panels near their bottom portions and then curve upward the length of the panels. Inserted in these seams is fabric piping, the visible portion of which is less than 1/4 inch wide, which is made of the same fabric as the outer shell. There is a heavy inner flap that runs just below the zipper for the front opening. At the top of this flap is a small rectangular-shaped label that gives the brand name of the jacket and the word "DOWN." The zipper for attaching the liner to the coat is located beneath this inner flap. At the rear center of the neck opening, attached

DS

to the collar seam are a small button and a metal chain hanger loop. The button is designed to be attached to a small loop on the liner. Inserted on an inside seam in the garment is a care label which gives washing and cleaning instructions for both the outside jacket and the inside shell and liner, as well as the fabric content of each.

The liner is a quilted long sleeve garment which is labeled to be filled with 80 percent down and 20 percent water fowl feathers. It has a knit collar band, and an elasticized waist. The end of each sleeve and the top center back portion near the collar have small elasticized loops that are designed to be attached to buttons in the outer jacket. The inside and outside shells of the liner are man-made woven fabrics. The sleeve ends are rough and finished only with an overcast stitching. Both the inside and outside surfaces, near the center just below the collar, contain large rectangular-shaped labels securely stitched in place. One side has a label with the manufacturer's name and logo and the other side has a label with fabric content and washing and cleaning instructions. It is noted that the fabric content portion of the label differs with the fabric content on the label of the outer garment. If the liner were worn by itself, in the same manner as it is attached to the outer garment, the exterior would have the shoulder seams, the armhole seams, one side seam, and one sleeve seam with unfinished quarter inch projections which have their ends enclosed with overcast stitching. In addition, the full front zippered opening would be extremely inconvenient to utilize since the metal pull portion would be on the inside of the garment. However, when the garment is reversed, the zipper works quite easily. In this reverse position, one side seam and one sleeve seam are unfinished in a similar manner to the unfinished seams on the opposite side.

D6

LAW AND ANALYSIS:

Headnote 3, Part 6, Schedule 3, Tariff Schedules of the United States Annotated (TSUSA), requires the separate classification of garments that are imported together, except for certain named garment combinations, none of which are applicable to the submitted sample. We believe that for Headnote 3 to be applicable to a jacket and liner, each portion must be suitable for use separately. If the liner would not reasonably be worn without the accompanying jacket, that liner is actually a part of the jacket and classifiable as such.

Here, in view of the unfinished seams on both sides of the liner and the unfinished sleeve ends, it appears that, under these facts, the liner and jacket are a single article and the liner is not intended to, nor would it reasonably, be worn without the outer jacket. Wearing the liner by itself would be a fugitive use. However, if the sleeve ends or the unfinished seams on one side of the inner portion of the liner were finished in a manner which would render it likely to be worn without the jacket, our decision might be different. In addition, if the liner is finished after importation, but prior to sale to the ultimate consumer, it is possible that it would change our decision.

HOLDING:

The submitted garment, consisting of an outer jacket and inner down-filled liner, is classifiable as a single coat. In the absence of a component material cost breakdown, we cannot determine the specific classification and quota category applicable to that garment.

Sincerely,

John T. Rath

TO : Chief, Customs Information Exchange
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Difference of Opinion on Customs Form 6431

In your memorandum of April 8, 1985, you transferred the difference of opinion on Customs Form 6431 dated August 20, 1984, concerning the tariff classification of a digital blood pressure monitor made in Japan. This matter is listed as the ninth difference on page 2 of CIE N-89/79, Suppl. No. 44, December 13, 1985. Our decision follows:

ISSUE:

The sending port contends the merchandise is properly classifiable under the provision for electrical measuring, checking, analyzing or automatically-controlling instruments and apparatus in item 712.49, Tariff Schedules of the United States (TSUS). The current column 1 rate of duty required under that provision is 5.5 percent ad valorem. The national import specialists are of the view that the correct classification is under the provision for electro-medical apparatus in item 709.17, TSUS. The current column 1 rate required under that provision is 4.4 percent ad valorem.

FACTS:

The merchandise is digital blood pressure measuring apparatus for home use.

D8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

LAW AND ANALYSIS:

In decisions issued on August 1, 1985, file Nos. 075813 and 075819, we held that certain health testing devices were not classifiable under the otherwise applicable provisions in Subpart B, Part 2, Schedule 7, TSUS, covering medical and surgical instruments and appliances because they were used by athletes in connection with exercise regimens and not by physicians. However, while the credentials of the user remain the major factor in determining chief use, that rule should not be carried to unwarranted extremes. In some circumstances, the bottom line will not be who the user is, but whether the use is for the diagnosis or treatment of disease.

Further, there are different levels of medical practice as well as different schools of medicine. In a sense, even a mother giving an aspirin to her child for a headache is part of the overall concept of the practice of medicine. We are unaware of any interest in blood pressure by whatever type of apparatus ascertained which could be completely dissociated from an interest in circulatory system pathology as opposed to sports.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

076036

D9

HOLDING:

For the foregoing reasons, we find that the apparatus in question is properly classifiable under item 709.17, TSUS.

Ms. Stephanie Raia
Skyline Manufacturing Co., Inc.
1333 Broadway
New York, New York 10018

Dear Ms. Raia:

Your letter of February 27, 1985, requests a ruling on the tariff classification and textile quota category designation of a trouser and short sleeve shirt set marked Style LK-001/2/3 and LK-004. The sample sent to Headquarters is LK-004. It consists of a knit shirt and woven trousers. We understand that you have informed the National Import Specialist responsible for this merchandise that both the shirt and trousers are composed of 65 percent cotton and 35 percent polyester fibers. We will classify these garments under the assumption that the component material in chief value is cotton. The label on the trousers sample states "100% cotton," which we understand to be in error. We also understand from the conversation with you that you are considering importing girls' sizes 2-4 and 4-6X and boys' sizes 4-7 and large boys' sizes 8-20. The garments are to be made in Hong Kong.

A new headnote 3(b), to Part 6, Schedule 3, Tariff Schedules of the United States (TSUS), became law in 1984, requiring the separate classification of garments imported and sold together as a unit. The general effect of this new law was the elimination of most commercial tests for the existence of an entirety in wearing apparel. Headquarters Ruling Letter (HRL), 075048. Excepted from this general rule, among other things, were garments known as playsuits.

Our recent ruling, HRL 075949, dated March 11, 1986, confirms that the "old" standards for what constituted an entirety would apply to playsuits and implies that not all combinations of garments claimed to be playsuits would be classified under a single tariff item. That ruling states that the standards used for determining whether two garments were classified together under the TSUS include reference to Customs' Textile Category Guidelines (CIE 36/79), the way the garments are known and marketed, their use, the construction, design and composition of the garments, and

D11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

the way that they may be worn together. We also noted that several factors must be evaluated before they yield a classification result, so they do not consist of a formula to be applied mechanically.

This sample includes trousers with self-fabric straps or suspenders permanently sewn to the back waistband. The fabric straps are threaded through a single fabric loop inserted at the center of the rear yoke of the knit shirt and then buttoned to the front waistband of the trousers. Less than 50 percent of the rear waistband is elasticized. Neither the trousers nor shirt is ornamented for tariff purposes.

The Textile Category Guidelines, C.I.E. 36/79, which provide general identity standards for broad types of wearing apparel, include in playsuits, p. 22, "[t]wo-piece physically connected entireties, such as shirts and shorts having matching shoulder loops with suspender straps designed to join the two pieces, which are so manufactured that the use of one without the other is not practicable." The category guidelines state also that, "excluded from this [children's coveralls and overalls] provision, are trouser-type garments which have no fabric bib to cover the upper part of the body."

The instant garments do not meet the standards for entirety within the playsuit category. The single loop in the middle of the back of the shirt through which the trouser suspenders are to be threaded serves only a minor function in keeping the suspenders in place in the back. It is not, however, a feature that ties the two garments together for tariff purposes, making the two pieces when joined a new and different article of commerce. The garments themselves may readily be worn in combination with other garments, the trousers with a different shirt, the shirt with different trousers or shorts. Therefore, the use of one garment without the other is entirely practicable. When the shirt is worn in combination with different trousers, the shirt's back loop does not outwardly identify the garment as missing some essential part of a combination, in that it is very similar to a hanger loop commonly found on woven oxford cloth shirts.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

D12

076037

The shirt is classified as follows:

For girls' sizes 2-4 and 4-6X, item 384.2980, Tariff Schedules of the United States Annotated (TSUSA), the provision for "Other...infants' wearing apparel, not ornamented: Of cotton: Knit: Shirts, Other: Infants': Other," dutiable at 21 percent ad valorem. This classification requires textile category designation 339.

For boys' sizes 4-7, item 384.2970, TSUSA, the provision for "Other...infants' wearing apparel, not ornamented: Of cotton: Knit: Shirts, Other: Infants': Boys' over 24 months of age," dutiable at 21 percent ad valorem. This classification requires textile category 339.

For boys' sizes 8-20, item 381.4130, TSUSA, the provision for "Other...boys' wearing apparel, not ornamented: Of cotton: Knit: Other: Shirts and sweaters: Other, Shirts: Other," dutiable at 21 percent ad valorem. This classification requires textile category 338.

The trousers are classified as follows:

For girls' sizes 2-4 and 4-6X, in item 384.4775, TSUSA, the provision for "Other...infants' wearing apparel, not ornamented: Of cotton: Not knit: Other: Other: Other...trousers and slacks...: Trousers and slacks: Other: Other," dutiable at 16.5 percent ad valorem. This classification requires textile category designation 348.

For boys' sizes 4-7, in item 384.4770, TSUSA, the provision for "Other...infants' wearing apparel, not ornamented: Of cotton: Not knit: Other: Other: Other...trousers and slacks...: Trousers and slacks: Other: Infant boys' over 24 months of age," dutiable at 16.5 percent ad valorem. This classification requires textile category designation 348.

For boys' sizes 8-20, item 381.6270, TSUSA, the provision for "Other men's or boys' wearing apparel, not ornamented: Of cotton: Not knit: Other: Other: Suits, trousers, slacks, and shorts, Trousers and slacks: Boys': Other," dutiable at 16.5 percent ad valorem. This classification requires textile category designation 347.

076047

Michael F. Butler, Esq.
Andrews & Kurth
Attorneys at Law
1730 Pennsylvania Avenue, N.W.
Suite 700
Washington, D.C. 20006

Dear Mr. Butler:

In your letter of April 10, 1985, on behalf of Kelly Manufacturing Company, you request information as to the proper classification and rate of duty on certain designated imported merchandise believed to be of that class or kind manufactured by your client. Your request is pursuant to 19 U.S.C. 1516, and section 175.1, Customs Regulations (19 CFR 175.1).

Your client is a domestic manufacturer of wheelbarrows, hand carts, hand trucks and garden carts. Such imported articles, you state, are normally classifiable under the tariff provision for vehicles (including trailers), not self-propelled, not specially provided for, and parts thereof, in item 692.60, Tariff Schedules of the United States (TSUS). However, you state that inasmuch as such articles from Taiwan classifiable in item 692.60 are no longer eligible for free entry under the Generalized System of Preferences, you now have reason to believe that the described articles are being entered at various Customs ports under the duty-free tariff provision for agricultural or horticultural tools, and parts thereof, in item 648.55, TSUS, or under the provision for farm wagons and carts, or agricultural or horticultural implements not specially provided for, in item 666.00, TSUS, also duty-free provisions.

Initially, there is nothing in your submission which would permit us to establish any similarity between the class or kind of domestic merchandise your client produces and the designated imported merchandise about which you inquire. However, wheelbarrows are normally small, usually single-wheeled vehicles with bins designed to carry small loads. They are fitted with handles at the rear by which the load may be pushed and guided manually. Both industrial quality types and those used around the home are classified in item 692.60, TSUS, dutiable in 1985 at the rate of 4.4 (now 3.8) percent ad valorem.

Hand carts are normally of metal, fiberglass or plastic construction, and are designed to rest on four wheels or casters and to be pushed or pulled. They normally have one or more shelves or trays and are similar to those used in the garment trade, in department stores, the food service business etc. These articles are likewise classified by Customs in item 692.60, TSUS.

E1

Hand trucks or dollies are normally of tubular steel construction, rest on two wheels, and have two handles to permit them to be pushed and guided from the rear. They are of types normally used by furniture movers, baggage handlers, and in other industrial or manufacturing environments. Such hand trucks or dollies have similarly been classified by Customs in item 692.60, TSUS. So-called garden carts are believed to be polyethylene types with lawn mower sized wheels and a single steel handle. They are of a kind used to move garden implements, tools, plants etc., over short distances. They are also used to transport snow, debris, and even groceries from place to place. These carts are also classified by Customs in item 692.60, TSUS.

With respect to your concern about possible misclassification of any of these articles under the duty-free provision for farm wagons and carts, in item 666.00, TSUS, it is unlikely that these articles would be classified under this provision at any port. However, we would be willing to consider any information in this regard and take corrective action, if appropriate. With respect to your concern about possible misclassification of any or all of these articles under item 648.55, TSUS, a provision for agricultural or horticultural tools, and parts thereof, it would be difficult to perceive of these articles as "tools" in a tariff sense.

The concerned Customs officer in New York has informally surveyed local import specialists at the ports of Houston, Jacksonville and New Orleans, where our records indicate the largest volume of similar articles are being imported, and has found that no improperly classified entries have been identified. However, a copy of this letter is being sent to each concerned port to insure that the described wheelbarrows, hand trucks, and hand and garden carts are and will continue to be properly classified.

If you wish to challenge the classification and rate of duty of any of those articles you have reason to believe are being misclassified, you may file a petition setting forth a description of the designated imported merchandise, the classification or rate of duty believed to be proper, and the reasons for this belief, pursuant to 19 U.S.C. 1516 and section 175.11, Customs Regulations.

Sincerely,

Arthur P. Schaffner

Re: Decision Protest and Application for Further Review, No. 1404-4-000022, Dated August 21, 1984

Dear Sir:

This protest and application for further review were timely filed against your action in classifying certain sliding heater kits as parts of machines for wrapping cigarette packages in item 662.10, Tariff Schedules of the United States (TSUS). The merchandise was entered at Norfolk on Entry No. 84-404140-3, dated February 7, 1984, liquidated on June 22, 1984. This ruling is our decision on the classification issue.

FACTS:

The merchandise consists of 50 kits for the 4350 Pack-S sliding heaters. Each kit consists of a sliding exit heater, a narrow type edge heater, a repositioning group for the end heater, thermostats with static-type elements, and an end-heater drive cam. The heater unit is used to seal the top and bottom of the cellophane wrapper on a cigarette package, and is mounted in the wrapper section of the cigarette package wrapping machine.

The protestant claims that the heater unit is classifiable under the provision for dielectric heating equipment in item 683.95, TSUS. It has been suggested by another Customs officer that classification is under the provision for other industrial machinery for the treatment of materials by a process involving a change of temperature, such as heating, in item 661.68, TSUS.

E3

THIS DOCUMENT MAY BE RELEASED TO THE

ISSUE:

Whether the heater kits are more specifically described in items 683.95 or 661.68, TSUS, rather than in item 662.10, TSUS?

LAW AND ANALYSIS:

The heaters, in this case, are resistance heaters by which heat, generated by current passing through resistors, is transferred by contact to the cellophane and thereby causes a seal to be made. Dielectric heat is not transferred by contact, but is created directly in the process material by frequent alternation of a current passing through it. Therefore, classification in item 683.95 is not applicable because the heater units are not described by the terms of that provision.

Although the term "materials" is a broad term which could include a cellophane wrapper, there is no evidence offered in this case which would indicate that its use in the superior heading to item 661.68 is broad enough to include selective heat treatment (sealing) of a made-up article. However, more to the point, the heater kit is a part of a machine. It is not a complete piece of machinery in its condition as imported. Rather, it must be assembled with a supporting frame, an activating air-piston, and other equipment. Classification in item 661.68 would be as a "part" of the named industrial machinery.

The machinery of which the heater units are parts is wrapping machinery specifically described in item 662.10, TSUS. The heat sealing function is secondary to the wrapping function and, therefore, is not sufficient for classification of the wrapping machinery in item 661.68, TSUS. Headnote 2, Part 4, Schedule 6, TSUS.

076066

E4

THIS DOCUMENT MAY BE RELEASED TO THE

HOLDING:

The sliding heater kits are parts of machines for wrapping cigarette packages and are classified in item 662.10, TSUS. You should deny the protest in full. A copy of this decision should be given to the protestant at the time notice of action is given on Customs Form 19.

Enclosed and returned for appropriate action is the Customs Form 19 with attachments.

Sincerely,

Arthur P Scheffler

By Harvey B. Fox

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3801-5-000092, classification of Liquid Kit Wax Bulk (Car Wax) - Canada

Liquid kit car wax and cleaner is designed to protect automobile surfaces through the application of a protective coating of wax. It is a product of Canada, entered in June 1984 and liquidated in July 1984.

The port classified the product under the provision for benzenoid mixtures in item 413.51, TSUS. The importer's claim is that it is classifiable under the provision for artificial mixtures of two or more animal, vegetable or mineral waxes in item 494.30, TSUS, or the provision for surface active agents in item 465.95, TSUS. If the benzenoid content is found to be more than de-minimis, an alternative is made for classification under the provision for benzenoid surface active agents in item 409.30, TSUS.

Liquid kit wax consists of, among other ingredients, 5 percent wax (paraffin & carnauba); 5 percent silicone fluid; and about 1 percent coloring agents, scent, preservatives, and emulsifiers. The emulsifiers are Triton x 45 - (4-5 (ethylene oxide) ethoxylated octyl phenol - .300), and Triton x 165 - (16 (ethylene oxide) ethoxylated octyl phenol - .49). The product is used to clean & wax automobiles.

Since the product contains only about 5 percent wax, it can not be considered a wax for tariff purposes. Therefore, item 494.30 is not controlling. Item 465.95, TSUS, applies to surface active agents. Since the product is more than a surfactant, it is not classifiable in item 465.95, TSUS. Inasmuch as we find the benzenoid content to be de-minimis, protestant's alternate claim will not be considered.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

EL

The dyes, scent and emulsifiers are benzenoid compounds. The dyes, preservatives and scent are present in less than a 1 percent total, and the emulsifier is about 1 percent in quantity. The issue, therefore, is whether the presence of the benzenoid emulsifiers to the extent of not more than 1 percent controls the classification.

The port maintains that the silicone fluids may be of benzenoid origin and that they, and the ethylene oxide, referred to as a benzenoid surface active agent, are both essential to the function of the product. The silicones, it is argued, are utilized as protective coatings and water repellants, while the ethylene oxide serves as a surface active agent. However, there is no evidence they are of benzenoid origin.

While ethylene oxide is used in the manufacture of surface active agents, it is not a surface active agent; nor is it a benzenoid compound. Furthermore, it is not present in the product.

The test, as stated by the court, for determining whether or not benzenoid ingredient in an otherwise non-benzenoid product was to be considered de minimis was (1) whether it was present in a minute amount, and (2) whether it played a role in the principal function of the product as a whole, or exhausted its usefulness prior to the performance of the principal function. United States v. Aceto Chemical Co., C.A.D. 1186.

In this instance, the dyes, scent, and preservative are less than 1 percent of the product and serve no useful purpose in the products' principal function. Therefore, they are considered de minimis. The emulsifiers account for less than 1 percent of the formulation of the product. The only way for this minute amount to control the classification would have to be based on its playing a role in the principal function of the product. In view of the minute amount of the benzenoid emulsifiers present, it is concluded that their only function is to maintain a uniform mixture of the ingredients prior to application. The emulsifiers neither aid in the cleaning nor in the washing functions of the product.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076075

E7

The merchandise is classifiable under the provision for mixtures in item 432.25. The 1984 rate is 4.2 percent ad valorem.

The protest is denied except to the extent that reclassification as indicated above will result in a partial allowance.

A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur V Schaffler

Chicago, Illinois 60607

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3901-4-000666

The above-captioned protest and application for further review were filed against the tariff classification of optical inspection apparatus which was the subject of entry No. 702794 filed at the port of Chicago in 1984. This merchandise is a product of the United Kingdom. Our decision follows:

ISSUE:

The merchandise was entered under the provision for electrical measuring, checking or analyzing instruments and apparatus in item 712.49, Tariff Schedules of the United States (TSUS). The 1984 column 1 rate of duty required under that provision was 6.8 prcent ad valorem. This protest objects to the advancement to the 1984 column 1 rate of duty of 15.6 percent required for optical measuring, checking, etc., apparatus in item 712.05, TSUS. The focus among the several subordinate issues to be taken into consideration in resolving the above competition is on whether the merchandise does not qualify for an optical goods classification because it does not aid or enhance vision.

E9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

FACTS:

The merchandise at issue is the Ames Fluorostat which is a fluorometer specially designed to conduct therapeutic drug assays. In this type of analysis, light from an arc lamp is used as excitation energy which causes substances usually in weak solution and usually after they have been combined with a fluorescing agent, referred to here as a reagent, to fluoresce. The intensity of fluorescence is proportional to the quantity of the material, and the fluorescence wavelength is shorter than the wavelength of the excitation beam and characteristic of the fluorescing material.

The apparatus contains a complex optical system consisting of the light source, collimators, lenses, filters, beam splitting mirrors, and photomultipliers.

LAW AND ANALYSIS:

Counsel for the protestant has argued this matter in the context of the four criteria in Engis Equipment Company v. United States, 62 Cust. Ct. 29, C.D. 3670 (1969). The first of these dealing with the necessity for the optical feature of merchandise to be primary or dominant in order for it to qualify as optical goods can no longer be regarded as current law in view of the various decisions making it clear that the test now is whether the optical feature is subsidiary

DOCUMENT MAY BE RELEASED TO THE PUBLIC

E10

076091

or not subsidiary. United States v. Ataka America, Inc., 64 CCPA 60, C.A.D. 1184 (1977); Norman G. Jensen, Inc. v. United States, 77 Cust. Ct. 9, C.D. 4668 (1976); Librascope v. United States, 76 Cust. Ct. 197, C.D. 4656 (1976); Corning Glass Works v. United States, 82 Cust. Ct. 249, C.D. 4807 (1979). But no serious claim is made in this matter that the optical feature of the merchandise in question is not more than subsidiary.

Nor is any serious claim made that the merchandise does not qualify as optical goods because of failure to meet the second and third Engis criteria dealing with the necessity for essentiality of the optics and for the routing and other manipulation of light in accordance with the principles of optics. Therefore, the principal claim made here is that the merchandise cannot be regarded as optical goods because it does not meet the fourth Engis criterion dealing with the necessity to aid or enhance vision.

Numerous precedents have been cited for the view that the fourth criterion remains an indispensible and viable factor in the tariff classification of optical goods. Of these, it should be noted that G.A.F. Corp. v. United States, 67 Cust. Ct. 167, C.D. 4269 (1971), has been virtually overrulled by Schott Optical Glass, Inc. v. United States, Slip Op. 84-9 (Ct. Int'l Trade, decided February 2, 1984,). With respect to the Ataka decision, which counsel also cites in support of this premise,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076091

E11

we have previously viewed that decision as authority for an opposite conclusion, particularly with reference to the court's statement, supra, at 66, "None of the foregoing [Engis] criteria is determinative in every case * * *." Finally, counsel suggests, in effect, that any further discussion on this point is moot in view of the definitive statement by the court supportive of counsel's position in EAC Engineering v. United States, Slip Op. 85-111 (Ct. Int'l Trade, decided October 24, 1985).

In that matter, the court's pertinent comments sustaining avoidance of an optical goods classification were an alternative to another basis for the decision, viz., the court's conclusion the optical feature of the merchandise in litigation was not more than subsidiary. In that connection, the optics consisted only of a filter for a photoelectric sensor which is to be distinguished from the complex optical system in the instant merchandise. Further, the Government conceded in that matter that vision was not aided while in our previous decisions we have held that vision is aided and the fourth Engis criterion satisfied if vision is aided only indirectly. In this connection, see United States v. J. Bliss, & Co., 29 Treas. Dec. 717, 724, T.D. 35980 (1915), where the court specifically provided for satisfaction of requirements for an optical goods tariff classification if vision is "indirectly" aided. It has

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076091

E12

been our view that vision is indirectly aided by apparatus which produces data in coordinate or other mathematical form, or which produces results by means which are a substitution for former analytical methods employing direct optical visualizations. In this connection, we note that electron microscopes are specifically provided for as optical goods in item 708.78, TSUS, even though phenomena for which images are produced are totally invisible through any direct optical viewing means.

At any rate, aside from any basis for distinguishing the EAC Bearings merchandise from the instant merchandise, the decision in that matter was interlocutory, and in view of the content of a later court order, a final decision and Government acquiescence or an appeal will not occur for several months hence. That decision, therefore, cannot serve as a precedent in the instant matter at this time. See also 19 CFR 152.16 for further information with respect to the official policy concerning the effect of judicial decisions on Customs classifications.

HOLDING:

For the foregoing reasons, we find that the merchandise is properly classifiable under the provision for optical electrical measuring, checking, or analyzing instruments and apparatus in item 712.05, TSUS. Accordingly, you are instructed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

Arthur P. Schaffner

Re: Request for Further Review of Protest No. 3802-4-000289 of December 3, 1984

Dear Sir:

This protest concerns the tariff classification of rubber truck bed mats. The merchandise was classified as film, strips, sheets, plates, slabs, blocks, filaments, rods, seamless tubing and other profile shapes, all the foregoing wholly or almost wholly of rubber or plastics; not of cellulosic plastics materials; flexible; other, in item 771.41. The protestant claims that it is properly classified under item 692.32, as parts of motor vehicles.

Our file on this case does not include a copy of the Form 19 or of the descriptive literature and blueprints referred to by the import specialists. Nevertheless, the following is our position on the matter.

We agree with the Port Huron import specialist that the merchandise cannot be classified as parts of motor vehicles. While an accessory can be classified as a part, and while a provision for parts is more specific than one for "articles NSPF" and will prevail over a general or basket provision, the controlling principle here is that to be classifiable as a part, the merchandise must serve a useful function in relation to the main article so that in some way it contributes to the safe or efficient operation of that article. In this case, the pickup truck can be operated with complete safety and quite efficiently without the rubber mat in the back.

We understand that the mats have cut-outs and corners to fit particular truck models. Headnote 2(iv)(A) of Part 12B, Schedule 7, precludes the classification of plastic cut to non-rectangular shapes in item 771.41. If in chief value of natural rubber, they are classified in item 774.25; if in chief value synthetic rubber, they are classified in item 774.55.

E.F. Gordon
Tooltech, Inc.
3145 Columbia Ave., NW.
Minneapolis, MN 55418

Dear Mr. Gordon:

In your letter of May 1, 1985, you request a ruling on whether or not certain processing operations on imported plain end pipe result in a substantial transformation.

The imported pipe would consist of pipe rolled to A.P.I. 5A, 5AX, or 5AC dimensional specifications for drill pipe, having a particular chemistry that the heat treatment, after upsetting, would result in the tensile and other metallurgical properties required by A.P.I. specifications for drill pipe. The specific processing, as described by you, is as follows:

> These manufacturing processes are upsetting, full length heat treating, and tool jointing. The upsetting operation is one in which the end of the pipe is heated to hot forging temperature and then upset in a horizontal forging machine to thicken the ends according to API specifications. The effect of this upset involves approximately six inches of each end of the pipe. The full length heat treating, again as specified by API, involves heating the pipe to the austenitizing (normalizing) temperature and allowing the pipe to cool in air to yield grade E drill pipe physical properties. For high strength drill pipe grades the pipe is severely quenched after reaching the austenitizing temperature and then is tempered to yield the specified physical properties for the desired high strength grade. These tempering temperatures are approximately 1000° F.
>
> Tool joints, the threaded connectors to be welded to each end of the upset and heat treated pipe, are manufactured from alloy steel. The material is machined to the specified OD and ID dimensions. These parts are then heat treated by application of an oil quench and temper process. Following this, final machining and threading are performed. Each set of tool joints consists of one externally threaded part (called the "box").

F2

The tool joints are applied to each end of the upset and heat treated pipe by the inertia welding practice. In this operation the tool joint member is secured in a spindle fitted with a fly wheel mass. The spindle and fly wheel are driven to a preset RPM. At the preset RPM the system is declutched and the tool joint member is thrust against the end of the pipe which is held securely in a clamping fixture. The energy in the fly wheel mass, being an inertial system, is converted to heat energy from friction at the interface of the contacting parts (pipe and tool joint), which raises the interface temperature sufficiently high to accomplish a forged weld by the thrust load applied. Immediately after this welding process, a post weld heat treating practice is employed, utilizing an electric induction coil, to properly heat treat the heat affected zone of the weld area. This heat affected zone is very narrow, being roughly one inch wide. After post weld heat treating, the extruded weld flash on both the inside and outside diameters in the weld area are removed by machining and grinding. At this point the pipe is complete as finished drill pipe to API specifications. Several nondestructive tests may be conducted and the pipe is prepared for reexport.

In a ruling letter of November 21, 1985 (file 553739), copy enclosed, a similar series of processing operations was held to be a substantial transformation of multifunctional green pipe and tubing. The nature of the processing to be performed by you is also such that it substantially transforms the imported tubing so that the final product, drill pipe, is a product of the United States.

You cite our ruling of March 15, 1985 (file 075174), copy enclosed, as controlling. We do not agree, and we distinguish on the basis that the plain end tubular products were not multifunctional green tubes, but satisfied A.P.I. dimensions and strength requirements prior to upsetting and threading. Furthermore, the addition of a coupling was not, as in our case, by welding which permanently attaches the joint.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Seattle, Washington 98174

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 30044000052

The above-captioned protest and application for further review were filed against your classification and appraisement of merchandise which was the subject of several entries filed at the port of Blaine in 1983 and 1984. The merchandise consists of disc doublers manufactured in Canada. Our decision follows:

ISSUE:

The merchandise was classified by Customs officers under the provision for articles of aluminum, not specially provided for (n.s.p.f), in item 657.40, Tariff Schedules of the United States (TSUS). The 1983 and 1984 column 1 rates of duty required under that provision were 7.6 percent and 7.1 percent ad valorem. It is claimed that the merchandise is rather classifiable under the provision for machines, n.s.p.f., in item 678.50, TSUS. The 1983 and 1984 column 1 rates under that provision were 4.4 percent and 4.2 percent ad valorem.

FACTS:

The merchandise is a device which requires two hands to operate. The device is placed on a fixed surface, and while a floppy disc is held in position with one hand, the other operates a lever which notches the flip side of the disc.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

This allows the flip side to be usable in certain equipment in certain circumstances.

LAW AND ANALYSIS:

For a discussion of many cases concerning what constitutes a machine for tariff classification purposes, reference is made to United States v. IDL Mfg. & Sales Corp., 48 CCPA 17, C.A.D. 756 (1960). In that discussion, it is shown that tools such as braces and pliers are not machines for tariff classification purposes because they do not "rise to the dignity of a machine." Id. at 19. However, the comparatively simple devices which were regarded as machines in that matter were so classified because it was found they contained return springs making them more than simple machines and they were commercially known as machines.

The instant tools are not shown to have return springs or to be commercially regarded as machines.

HOLDING:

For the foregoing reasons, we find that the tariff classification of the instant devices under the provision for articles of aluminum, n.s.p.f., in item 657.40, TSUS, was correct. Therefore, you are instructed to deny the protest except to the extent any concession with respect to the valuation issue may result in a partial allowance. A copy of

SUBJECT: Request for Reconsideration of Internal Advice Request No. 34/84--Classification of Infants' Tank Top and Bottoms

This is in response to a request by Mr. Duncan Nixon of Sharretts, Paley, Carter & Blauvelt, P.C. on behalf of H. Bailey International Ltd., dated May 28, 1985. The decision being reconsidered bears our file no. 074273 and is dated February 21, 1985.

SUMMARY:

The decision being reconsidered held that infants' (boys') cotton twill short pants were properly classified as shorts in item 383.0620, Tariff Schedules of the United States (TSUS), taking textile category 348. The importer still claims that the garments are really swimwear and should therefore be classified in item 383.0895, TSUS, taking textile category 359.

CLAIMS:

(1) This office did not invite him for a conference prior to the issuance of the decision, despite his request;

(2) The merchandise is not sold in a clear plastic bag, which fact would lead to a different result;

F1

RELEASED TO THE

(3) The importer's arguments are misstated and misinterpreted in the decision, especially with respect to whether the liner in the instant merchandise falls within the guidelines;

(4) The importers were not accorded "prospective application" of the decision as they requested;

(5) Customs placed "undue emphasis" on the "wick effect," because the wick effect is not evidence of the garment being used as shorts, but merely corresponds to the "latest fashion trends in swimwear;"

(6) Boys in sizes 2-4 (age range 1-1/2 to 2-1/2) wear the garments over diapers which means the garments' getting wet is irrelevant.

ANALYSIS and RESPONSE:

1. Our failure to grant the importer's request for a conference was inadvertent. Such a conference was granted in connection with the reconsideration request, however, and occurred on February 4, 1986.

Counsel and the importer explained how the all-cotton content of the shorts was more or less accidental, brought about because the manufacturer in Hong Kong could not secure

DOCUMENT MAY BE RELEASED TO THE PUBLIC

F8

076380

fabric of a cotton-polyester blend to meet shipment requirements. Consequently, a small portion of the total order turned out to be all cotton and was the subject of the Internal Advice request.

The importer argued in particular that the marketing of the garments was in the boys and infants swimwear department, as opposed to the sportswear or shorts department.

Since that discussion provided no new legal information requiring an additional submission under 19 CFR §177.4(d), no additional comments addressing matters raised at the conference are included here.

2. The importer now claims not to import the shorts in the clear plastic bag. Two statements from large customers are included to support this claim.

Whether the importer presently uses this bag with the printing on it is irrelevant to the outcome of the initial decision, because the bag was nonetheless made for the importer by the manufacturer and contained all the information necessary for retail sale, including country of origin marking, size, and suffocation safety warning. The bag was never considered to be determinative of the identity of the merchandise, but just one element to consider along with the design and composition of the garment.

076380

THIS DOCUMENT MAY BE RELEASED TO THE

F9

3. Counsel essentially argued that the instant merchandise contained a sufficient liner to meet the swimwear guidelines. Our point remains that a complete liner is worth considering as an identity element for swimwear, not whatever kind of liner the importer claims is sufficient. The point of the statement quoted by counsel as Customs' main position is itself misinterpreted. The point is that under our guidelines, Customs will examine and interpret what constitutes a real, commercially acceptable liner.

Counsel further argues that if the existence of a liner is not the sine qua non of swimtrunks, then the existence of a partial liner in their garment should not reduce the identity of the garment as swimwear. The argument is bolstered by the claim that little boys do not require the brief type of liner that adult men would.

We have examined the sample and remain convinced that the instant type of liner does not meet the standards for swimwear, however measured. The garment, which fails to present sufficient characteristics of swimwear, must be classified as shorts.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076380

F10

4. Counsel for the importers made a request for prospective application of what they consider to be the appropriate quota category. The matter was not addressed in our response because in circumstances such as this, Customs does not have the authority to direct prospective application of proper quota categories. The importers claim to have presented, through their broker, a garment to the import specialist at JFK Airport and to have received a nonbinding tariff classification ruling to the effect that the proper category was 659. The garment presented was of different fiber composition.

If the importer's broker had submitted a sample of the garment to be imported and Customs had sent a binding ruling to the importer, then prospective, or at least nonretroactive, application of the swimwear standards might be in order. Those facts are not present here. Customs appreciates the importer's predicament, but is not in a position to exercise any authority, in effect, to hold the importers harmless for the instant entries.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076380

F11

5. The wick effect was only one factor taken into consideration in our decision to classify the instant merchandise as shorts and not swimwear. We stand by our statements in the decision, as well as the general statements about the general inappropriateness of heavy cotton twill for swim trunks. We would not dispute that styles, by definition, continue to change and that 100 percent cotton swimwear may come in and out of fashion. This argument is, however, irrelevant to the present case.

6. Counsel's comments about infants and diapers appear irrelevant or misplaced. When Customs says, in general, that heavy cotton fabric is not typically used in garments worn for swimming, counsel for the importer counters with the claim that the garment's getting wet and drying is irrelevant, because in the 1-1/2 to 2-1/2 year age range, the children wear diapers under the garment. The claim is unsupported and has no bearing on our classification of the merchandise. If counsel means that infants are not sent into the water wearing diapers, then that fact alone would fall on the side of the garment being considered shorts and not swimwear. Simply because our ruling 073387 creates a narrow

THIS DOCUMENT MAY BE RELEASED TO THE

076380

512

exception for "small boys" swimtrunks of real swimtrunk design, when the swimtrunks are of "medium weight cotton blended twill woven fabric," it does not mean that something not used as swimwear is to be classified as swimwear.

HOLDING:

We adhere to our holding in IA 34/84, 074273, issued February 21, 1985.

TO : District Director of Customs
Philadelphia, Pennsylvania 19106

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice No. 52/85 Concerning Classification of Heavy-Duty Leaf Springs of Base Metal, Used on Semitrailers (Your Memorandum of May 23, 1985, MAN-1-DD:CV:MAM)

Your position is that the leaf springs in question here should be classified under item 652.88, TSUS, as other springs. The importer claims that the proper classification is under item 652.84, TSUS, as springs suitable for motor vehicle suspension. We are in agreement with your position.

Semitrailers are not motor vehicles. A truck tractor imported with its trailer is classified, together with the trailer, as a motor vehicle, under item 692.02, according to Headnote 1 to Part 6B of Schedule 6. By the same headnote, the tractor and the trailer, if imported separately, are classified as "parts of the foregoing motor vehicles," under item 692.29 and item 692.32, respectively. However, the designation of the tractor and trailer as a motor vehicle, and of the trailer alone as a part of a motor vehicle, applies only for purposes of Subpart B of Part 6. Springs are classified under Subpart F of Part 3, which is not governed by this headnote.

You should therefore advise the importer that the springs, used on semitrailers, are properly classified under item 652.88, TSUS, as other springs.

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-018034, Classification of a Petroleum Product

The product from Mexico was entered as an unfinished naphtha in item 475.35, TSUS.

On the protest, it was contended in behalf of the importer that the product could not be classified as naphtha, since it contained lead, but inasmuch as it contained significant amounts of dutiable benzenoids, the entry should be classified as a benzenoid mixture in item 407.16, TSUS.

The port originally classified the product as naphtha, but after receiving test results changed the classification to that for chemical mixtures in item 432.10, TSUS, with the applicable rate of duty for tetraethyl lead in item 429.70, TSUS.

The imported petroleum product was apparently not sampled and analyzed by Customs. However, the importer did submit an analysis of the product. As the analysis shows that the imported product contains lead, it is not classifiable as naphtha in item 475.35, TSUS. Furthermore, as it does not meet the standards for automotive gasoline, in either T.D. 66-23(13) or ASTM D439, it is not classifiable as a motor fuel in item 475.25, TSUS.

As to item 407.16, no test results were submitted for the dutiable benzenoid content, so that it cannot be concluded that the import is classifiable as a benzenoid mixture in item 407.16, TSUS. In view of the presence of lead, the product is classifiable as a mixture in item 432.10, TSUS, dutiable at the rate for lead in item 429.70.

CLA-2:CO:R:CV:G
076480 JCH

076480

District Director of Customs
Second and Chestnut Streets
Philadelphia, Pennsylvania 19106

Dear Sir:

Re: Decision on Application for Further Review of
Protest No. 11014000197

The above-captioned protest and application for further review were filed against the tariff classification of certain miniature articles which were the subject of entry No. 84-248517-1 filed at the port of Philadelphia in 1984. The merchandise is a product of Taiwan. Our decision follows:

ISSUES:

The merchandise was entered under the provision for certain models in item 737.15, Tariff Schedules of the United States, (TSUS) which would provide a free rate under the Generalized System of Preferences (GSP). However, duty was advanced to the 1984 column 1 rate of 10.9 percent for toys, not specifially provided for (n.s.p.f.), in item 737.95, TSUS, which is not a GSP-eligible item for merchandise made in Taiwan. Therefore, the main issues to be resolved in this protest are whether the merchandise qualifies as models for tariff classification purposes under the applicable precedents, and, if not, whether it qualifies as toys under the applicable criteria.

FACTS:

The merchandise is invoiced as miniature coffee bins, tea bins, wooden counters and seed packet boxes. These articles are made for

TRANSMITTED TO THE PUBLIC

63

and imported by an American firm which otherwise specializes in precious metal collectible minted and similar commemorative articles which are offered to the public directly through media solicitations rather than through stores, and which are often purchased in installment shipments. The articles in question will be packed together with other miniature articles and will constitute the first shipment of one of the importer's several offerings of miniature settings designated the American Country Stor The submitted brochure shows that the complete setting will be mailed in 15 monthly shipments costing $29.50 each. It is further stated that the articles are made to a 1/12-inch scale, will be supplied with a certificate of authenticity, will "capture the interest and imagination of every member of your family," and provide "the fun of arranging and rearranging your stock."

It is our understanding that the theme and prototypes for this particular setting in miniature have their origins in Country Store, by Elmer L. Smith, which we were unable to find catalogued at the Library of Congress. Other books by Mr. Smith relating to Lancaster County, Pennsylvania, history, however, are catalogued.

LAW AND ANALYSIS:

At the outset, it should be stated that all miniaturized articles do not constitute models for tariff classification purposes. Whether or not an article constitutes a model, as

RELEASED TO THE

G4

we have indicated in our previous decisions relied on by the protestant and in previous correspondence in this matter, largely depends on the degree of faithfulness of the miniaturized depiction to specific prototypes. This will generally be determined by comparisons of the miniature with pictures of or other information concerning the prototype. But while we have afforded the opportunity for furnishing supplemental submissions for comparisons to be made, the protestant rather has focused attention on pertinent precedents, some of which have previously been called to our attention.

Most important among the cited precedents is Lohzin & Born, Inc. v. United States, 79 Cust. Ct. 34, C.D. 4710 (1977), in which it was held that a model does not have to be an exact replication. Further, we have held that only a degree of faithfulness will be required which is reasonable for the scale used. See, for example, our decision of October 9, 1980, file No. 065180. Nevertheless, a miniaturized article still must be "more than a crude form" of the prototype. Lohzin & Born, supra, at 41. In our opinion, the miniature seed packet holder and the tea and coffee bins merely represent approximations of prototype articles illustrated in copies of pages of the Country Store which have been submitted and, therefore, cannot be regarded as models.

RELEASED TO THE

076480

65

The miniature seed packet holders lack the proportions of prototypes in which seed envelopes were displayed standing up. In the miniatures, the envelopes lie flat. The tea and coffee bins have writing and borders on them which give the appearance of having been scrawled on without any guidelines. The bins and the seed packet holder also are made of materials which if multiplied to actual size would produce materials considerably thicker than the materials of which prototypes were made. While the high cost of the complete country store setting and of the installment of which the instant articles are a part would suggest higher quality merchandise, the articles are part of a multiplicity of articles which individually are not in an excessively high-cost category.

While the miniature counter may be less crude, we find that it is not a model because it only represents a general class of article. While Lohzin & Born is also cited for the view that a model does not have to represent a specific article, but can represent a class or kind, the class or kind represented by the merchandise in that matter was Spanish Armada sailing vessels. In our view, country store counters do not represent a class or kind of article of similar historical significance or of similar uniform features for general recognition. The instant article would only be regarded as a replication of a country

This document may be RELEASED TO THE

076480

66

store counter because it is designated as such, and it otherwise has no features that we can identify which would disqualify it for use as a miniature counter for other settings.

Since it is our position that the articles at issue cannot be regarded as models for tariff classification purposes, the next question is whether they are toys. The high total price of the complete setting and sale through channels outside of those normally associated with the distribution of toys, of course, militate against considering the articles as toys even though the cost of individual items may not be excessive. However, while the protestant normally caters to numismatists or other collectors who purchase their merchandise for display purposes, more than display is contemplated for the instant merchandise. Manipulation of the articles for fun in the same manner that doll house furniture is manipulated is clearly contemplated. While this use may not have amusement value in the same sense as novelty articles, practical jokes, etc., that is not necessarily the essence of the amusement associated with toys. In a sense, any article which permits simulation of a real-life activity on a reduced scale would constitute the essence of the amusement value of toys. The instant articles permit the simulation of the proprietorship of a country store in the same manner that other toys permit other real-life activity simulations. It is to be further noted that the fact that adults more than children may be involved in

THIS DOCUMENT MAY BE RELEASED TO THE

076480

the imagination excursions engendered by the instant articles does not prevent their being regarded as toys, since Headnote 2, Subpart E, Part 5, Schedule 7, TSUS, has extended the concept of a toy from articles just for the amusement of children to articles for the amusement of adults as well.

HOLDING:

For the foregoing reasons, we find that the miniature seed packet holders, tea and coffee bins and counter are toys classifiable under 737.95, TSUS. Accordingly, you are instructed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

CLA-2:CO:R:CV:G
076486 TLL

076486

Walter J. Spak, Esq.
Willkie, Farr & Gallagher
818 Connecticut Avenue, N.W.
Washington, D.C. 20006

Dear Mr. Spak:

This is in reply to your letter dated June 17, 1985, submitted on behalf of your client, Cargill Citro America I orporated, regarding the country of origin of concentrated apple juice.

Concentrated apple juice is prepared for export to the United States by the firm of Gebr. Braun GmbH & Co. KG of the Federal Republic of Germany (FRG). Some of this juice is prepared from fresh apples in their West German plant. Braun also imports significant quantities of concentrate from the Polish People's Republic (PPR) and the German Democratic Republic (GDR). The Eastern European juice is subjected to processing in West Germany, combined with the juice produced there, and eventually exported to the United States. The central issue involved here is the country of origin of the final product for the purposes of duty assessment, column one versus column two.

You argue that the Eastern European juice undergoes a substantial transformation in West Germany and becomes a product thereof. The PPR and GDR juice is imported into the Federal Republic in the form of concentrate. You state that Braun considers this juice to be unacceptable for mixing with their juice in the condition as imported into West Germany. Braun dilutes the eastern juice back to single strength and mixes it together with fresh squeezed West German apple juice. This mixture is considered too cloudy at this stage for Braun's purposes so the entire mixture is submitted to a number of clarifying agents and then filtered. The mixture is then concentrated under a vacuum evaporation process and an unspecified amount of apple flavoring essence is added prior to being packed in drums for export.

RETURNED TO THE

69

Item 165.15, Tariff Schedules of the United States provides for the classification of apple juice, duty-free, if entitled to column one treatment and 5 cents per gallon if subject to column two treatment. General Headnote 3(d), TSUS.

The classification of commingled and processed apple juice was considered in Headquarters Ruling Letter (HRL) 038830 AB, dated May 14, 1975, copy enclosed. We have reviewed the file and conclude that that decision should continue to be followed.

Furthermore, all of the above processes were discussed in HRL 728557, dated September 4, 1985, which dealt with the country of origin marking of orange juice. While it was argued that these processes would significantly improve the quality of the fruit juice in question, it was held that they did not fundamentally change the fruit juice into another article of commerce. Since concentrated orange juice from Brazil does not lose its identity when reconstituted, pasteurized, purified, blended with domestic juice and packed for retail sale, neither would East German and Polish apple juice subjected to like processing lose its identity or be substantially transformed. Accordingly, we consider this product subject in its entirety to the column 2 rate set forth under item 165.15, TSUS.

In reviewing HRL 038830, General Headnote 7, TSUS, and the applicable case law, we can find no legal authority for applying General Headnote 7 in those situations where at the time of entry the Customs Service was not provided with information necessary to determine that the imported product was, in fact, commingled. Consequently, any duties tendered for past shipments (footnote 3 of your letter) should be made with the assumption that the entire shipment is subject to column 2 rates of duty.

Sincerely,

Harvey B. Fox

Mr. A. Elenewski
DeFrogger Industries, Inc.
Rt. 2, 2270 15th Lane
Friendship, Wisconsin 53934

Dear Mr. Elenewski:

In your May 16, 1985 letter, you request a ruling on the tariff classification of a product known as the DeFrogger.

The device is designed to defrost the face mask worn by a snowmobile or motorcycle rider as needed in cold weather. You describe the unit as being powered by the exciter coil of a snowmobile or motorcycle or by a 12-volt battery. The device operates by resistance heat tape applied on the transparent face shield. A cord extends from the mask to a control panel where a three-position switch is located. The panel incorporates an indicator light. A cord runs from the panel to the jack which in turn plugs into the power source.

The article is electrical and is not specifically described in the tariff schedules. Therefore, it is classified in item 688.42 of the Tariff Schedules of the United States, the provision for electrical articles not specially provided for, other, dutiable at 4.1 percent ad valorem for products of Taiwan.

Sincerely,

Arthur P. Schaffner

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-016358, Concerning Entry Numbers 84-101416-1, 84-101466-6, and 84-101415-8, on the Classification of Petroleum Products from Romania

The petroleum products were entered and classified under the provision for motor fuel in item 475.25, TSUS. In behalf of the importer it is claimed that the products are classifiable as benzenoid mixtures in item 407.16, TSUS, because of the benzenoid content, and further, that they are not chiefly used as motor fuel and do not meet the specifications for the current standards for motor fuels. A sample of the entries, however, was analyzed and was found to meet the standards for motor fuel in item 475.25, TSUS.

Since the petroleum products were originally entered as motor fuel, and a sample disclosed that one of the entries met motor fuel standards, and, further, no evidence was submitted on the dutiable benzenoid content of any of the products in issue, they are classifiable as entered in item 475.25, TSUS.

You are directed to deny the protest in full. A copy of this decision should be attached to the Customs Form 19 notice of denial.

Sincerely,

Arthur P. Schifflin

Arthur P. Schifflin

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1007-4-017787, Classification of Unleaded Feed Stock

The petroleum product was entered as unleaded feed stock. It was classified as motor fuel in item 475.25, TSUS. The claim by the importer is that it is a benzenoid mixture is item 407.16, TSUS.

The laboratory tests indicate that the imported product meets both the ASTM D439 and T.D. 66-23(13) specifications for motor fuel. The claim in behalf of the importer is that the product has a significant amount of benzenoids, and, therefore, should be classifiable as a benzenoid mixture in item 407.16, TSUS. However, no evidence was submitted showing the benzenoid content to back up this claim.

The product conforms to the standards for motor fuel and the provision for motor fuel is the more specific provision. Furthermore, there is no convincing evidence that the imported product would not be commercially acceptable as motor fuel. Finally, no evidence was furnished on the dutiable benzenoid content.

For the above reasons you are directed to deny the protest in full. A copy of this decision should be made available to the protestant by attaching it to the Customs Form 19 notice of denial.

Sincerely,

Arthur P. Schifflin

Dear Ms. Broere:

This is in reply to your letter dated July 2, 1985, further in regard to a requested amendment of 19 CFR 151.91 to change the Brix value of slipskin grapes.

As a result of your most recent inquiry, we have obtained additional information from the United States Department of Agriculture. This information discloses that slipskin grapes are produced commercially in 13 states, including New York. Since we are charged by Headnote 3, Part 12A, Schedule 1, Tariff Schedules of the United States (TSUS), with ascertaining "the average Brix value of like natural unconcentrated juice in the trade and commerce of the United States," we are unable to conclude that our statutory responsibility will have been satisfied by the information which you have furnished, that is, information from Cornell University and corroboration by Taylor Wine Company, Hammondsport, New York. Accordingly, we are unable to accede to your request.

If you wish to pursue this matter further, we suggest that you obtain corroboration of the average Brix value in the trade and commerce of the United States of unconcentrated grape juice from slipskin grapes from the applicable agricultural boards (departments) of the top slipskin grape producing states, including California, New York, Michigan and Washington.

Sincerely,

For Harvey B. Fox

076583

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 2904-5-000090

This protest was filed against your decision in the liquidation on December 7, 1984, of entry No. 435052 dated February 10, 1984, covering a shipment of Tektronix brand coated paper for an ink jet color image printer, produced in Japan.

This ruling concerns the correct tariff classification of the Tektronix brand paper, imported in rolls and in sheets.

FACTS:

The merchandise at issue is Tektronix brand coated paper for an ink jet color printer, imported in rolls and in sheets. The rolls were over 6 inches wide. The sheets were both cut to size or shape (not over 15 inches by 15 inches) and over 15 inches by 15 inches.

The merchandise was liquidated under the provision for coated or impregnated paper, writing paper weighing over 18 pounds per ream, not lithographically printed, in item 254.56, Tariff Schedules of the United States (TSUS), for sheets over 15 inches by 15 inches and for rolls of paper over 6 inches wide and under the provision for other paper, cut to size or shape, writing paper, weighing over 18 pounds per ream, in item 256.20, TSUS, for sheets cut to size or shape, not over 15 inches by 15 inches.

The protestant claims that the merchandise should be classified under the provision for coated or impregnated paper, other paper, not specially provided for, not lithographically printed, not gummed, impregnated, coated

A3

RELEASED TO THE

or both, but not otherwise treated, in item 254.80, TSUS, if in rolls or in sheets over 15 inches by 15 inches, and under the provision for other paper, cut to size or shape, other, not specially provided for, in item 256.30, TSUS, if in sheets not over 15 inches by 15 inches.

ISSUE:

Is the Tektronix coated paper for an ink jet color printer classifiable as writing paper in items 254.56, TSUS, and 256.20, TSUS, or as other paper, not specially provided for, in items 254.80, TSUS, and 256.30, TSUS?

LAW AND ANALYSIS:

Headnote 2(d) of Part 4, Schedule 2, TSUS, defines "writing paper" as follows:

> the term "writing paper" includes, but is not limited to, papers such as ledger, letter, manifold, mimeograph, note, onionskin, tablet, and typewriter paper.

In addition to the papers enumerated above, writing papers have been defined, for tariff purposes, as paper "for the recordation of data by pen, pencil, typewriter or similar device as a means of communication by one or a limited number of copies to one or a limited number of receivers." See Customs Headquarters Ruling Letter (HRL) 074447 of August 7, 1984, and Treasury Decision 72-207 (1972). Customs has held that paper chiefly used in or with such machines, for such purposes, is writing paper. See HRL 065371 of October 30, 1980, HRL 074564 of November 26, 1984, and HRL 074447, cited above.

The protestant distinguishes the instant merchandise and claims that it is "other coated paper" classifiable in item 254.80, TSUS, when in rolls, and in item 256.30, TSUS, when cut to shape or size. He claims that ink jet paper is neither writing paper nor printing paper as defined in the tariff schedules for the following reasons:

076583

TO THE

1. The imported paper is unique. It is specifically developed for use with high technology color imaging equipment and is sold for use with color ink jet copiers.

2. The paper is not and cannot be used as writing paper. The paper is primarily used to produce clear color images, not the written word. Writing paper is usually used with equipment designed to produce characters or words. The paper costs eight times as much as standard computer paper. Pencils cannot write on this paper, and even some ink pens do not write satisfactorily on this paper.

3. Ink jet paper does not have the same characteristics as writing paper. The specifications for the instant paper call for impregnation or off-machine coating which make the paper capable of receiving jet sprayed ink droplets without bleeding through or running. It does not meet Joint Committee on Printing (JCP) paper specifications for certain writing paper purchased by the United States government. The manufacturer states that the fiber in the paper is wood fiber rather than bleached kraft or linen.

Two of the protestant's claims have not previously been considered. The first is that images used to convey the information are "printed" by an ink jet process, and the second is that the machines are primarily used to copy pictorial matter rather than text.

"Writing" for tariff purposes includes the product of mechanical processes which are similar to printing -- e.g., typewriting and mimeographic reproduction. Typewriters have been replaced by word processors, i.e., computer terminals with so-called "printers" -- but the end product is a hard copy, just as it was with typewriters.

In a telephone conversation with a member of this office, Mr. Thomas Stanton of Tektronix stated that the jet ink color copier process is similar in some ways to the printers in word processors. He stated that the instant paper is used in an office environment by engineers who make designs or layouts (e.g., geographic or topographic). Mr. Stanton explained that first the computer terminal makes the designs (just as the word processor terminal does). Then the ink jet printer is used to print

076583

AS

out designs on the paper as a hard copy. When finished, the engineers can look at the designs or layouts, discuss them and publish the results of what they have done.

The second claim, citing pictorial matter rather than text as a basis for not classifying the paper as writing paper, is somewhat vitiated by an article in the July 1983 issue of Tappi Journal. This article, which is written by three employees of Tektronix, describes the color jet ink spray process. The authors recapitulate their findings and describe the details of their experiments as follows:

> CONCLUSION -- Good writing performance in ink jet printing requires a very rapid absorption of the ink vehicle into the paper.... As ink jet technology is further developed, fast copy time will be increasingly desirable. Thus, writing speeds will be pushed higher and higher. (Emphasis added).
>
> EXPERIMENTAL DETAILS — The ink jet writing was done on a prototype version of a Tektronix 4691 color copier. The patterns used include substantial areas of solid fill and alpha numerics in a range of character sizes. (Emphasis added).

Based on the above-quoted article, it appears that the subject paper is used for textual copying as well as for graphic color images. Mr. Stanton's statements regarding the end use of the computer-generated Tektronix graphics indicate that the graphic images are informational rather than merely decorative. Whether the print-out information is textual or pictorial, the process still involves the use of the computer terminal and the "printer."

Regarding the protestant's other claims, the components of the paper and its coating or impregnation would not be sufficient to change its classification, inasmuch as writing paper is made of a variety of components and can be coated or impregnated. Furthermore, cost alone would not be enough to affect its classification, because writing paper differs greatly in cost, from inexpensive tablet papers to embossed stationery. In

076583

A6

MAY BE RELEASED TO THE

view of Headnote 2(d) of Part 4, Schedule 2, TSUS, T.D. 72-207 and HRL 065371, which establish that papers written on by devices similar to those enunciated in T.D. 72-207 are writing paper, whether or not pens and pencils can write easily on the instant paper is also not as relevant as protestant would have us believe. Finally, the JCP specifications deal with certain types of writing paper which are purchased for government use. Not only are the JCP standards cited not all-inclusive, but they are not at all comparable to tariff provisions nor to tariff terms.

After careful consideration of all the facts in the file before us, we find that the Tektronix color ink jet spray paper is writing paper for tariff purposes.

HOLDING:

The instant Tektronix coated paper is classified as writing paper for tariff purposes. The instant rolls and the sheets measuring over 15 inches by 15 inches are classified in item 254.56, TSUS. The sheets cut to size or shape (under 15 inches by 15 inches) are classified in item 256.20, TSUS. You should deny the protest in full. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

John T. Rath

Dear Sir:

This is in response to your memorandum dated April 2, 1985, requesting Internal Advice on the tariff classification of merchandise identified by the importer as Estasol. Your request was initiated by a letter dated March 13, 1985, from the attorneys for the importer.

The merchandise at issue is a product whose trade name is estasol and it was entered in 1984. It consists of a mixture of dimethyl adipate, dimethyl glutarate and dimethyl succinate. The importer claims that Estasol should be classified under the provision for dibasic-acid esters in item 465.90, TSUS.

Schedule 4, Part 1, Headnote 1, provides with specific exceptions, that all products described in Part 1 shall be classified there even if more specifically provided for elsewhere in Schedule 4. Item 407.06, TSUS, provides for other acyclic organic chemical products, which are obtained, derived, or manufactured in whole or in part from products having benzenoid structures. Each of the Estasol components named above was classified in former item 407.07, TSUS (currently item 407.06, TSUS) if produced from benzenoid structures. Customs has confirmed that the Estasol components are derived from benzenoid sources.

The information we have is that Estasol is a solvent containing approximately 60 percent by weight dimethyl glutarate which was provided for in former item 407.07, TSUS.

There is no exception in the benzenoid headnotes for exempting the benzenoid components in this product from classification in Part 1(b), Schedule 4, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Thus, since the product is a mixture of solvents which contain over 25 percent of a benzenoid provided for in Schedule 4, Part 1(b), it is classifiable in item 407.09, TSUS, with the rate of duty not less than the highest rate applicable to any component material. The rate is the 13.5 percent ad valorem in former item 407.07, TSUS.

Sincerely,

Arthur P. Schaffner

076586

Dear Sir:

Re: Application for Further Review of Protest No. 1401-3-000289

This application for further review was filed against your decision in the classification of certain feed supplements: Aminovite, Salkavite, Folactin Red, Feromel and Supplement C. This merchandise was classified under various item numbers set forth in Schedule 4, Tariff Schedules of the United States (TSUS). Protestant claims that the feed supplements should be classified under item 184.85, TSUS.

In considering the question of whether feed supplements are classifiable under item 184.85, Headnote 1(a), Subpart C, Part 15, Schedule 1, Tariff Schedules of the United States, is controlling. That headnote states:

> 1. For the purpose of this subpart -- (a) the term "animal feeds, and ingredients therefore" embraces products chiefly used as ingredients in such food, respectively, but such term does not include any product provided for in Schedule 4 (except part 2E thereof) or Schedule 5 (except part 1K thereof); xxx

The significance of this particular Headnote should not be minimized. In the case of Joseph F. Hendrix v. United States, 82 Cust. Ct. 264, C.D. 4809 (1979), the court emphasized this point in the following manner.

> In the absence of Headnote 1(a) of Schedule 1, Part 15, Subpart C of the Tariff Schedules of the United States, the marigold

RELEASED TO THE PUBLIC

A10

meal would fall within the provision as classified. However, said Headnote excludes products provided for in Schedule 5 (except Part 2E) or Schedule 5 (except Part 1K). Plaintiff's claim is under Schedule 4, Part 9; hence, if the claimed provision is applicable to the merchandise at bar, it would not be dutiable under the provision utilized for classification. The intent of Congress in enacting the modification of Headnote 1(a) of Schedule 1, Part 15, Subpart C, is referred to in Senate Report No. 530 (at pp. 11-12), and the Conference Report No. 979 (at p. 12). This exclusionary language was not initially in the Tariff Schedules of the United States, but was added by Public Law 89-241 (1965). The reports point out the amendment is designed to insure that articles described in the chemical and nonmetallic mineral schedules are not to be dutiable as animal feed. The sole judicial interpretation of said Headnote 1(a) insofar as research reveals is the case of Enrique Garza v. United States, 66 Cust. Ct. 212, C.D. 4192 (1971), which held that plaintiff's burden is limited to establishing that the imported merchandise comes within the scope of the provision claimed.

None of the products are subject to classification under 184.85, TSUS, for the following reasons:

Aminovite is an animal feed and is classified as an animal feed containing milk or milk derivatives in item 184.80/950.17 TSUS. In view of the fact that 33 percent of the product is skim milk powder, it is subject to quota restrictions which should be applied to future shipments. The quota aspect of this importation is not under consideration here.

Supplement C is classified under the provision for mixed feeds, and mixed feed ingredients in item 184.70, TSUS. The listed ingredients meet the requirements of Headnote 1(b), Part 15, Schedule 1, which defines the terms mixed feeds and mixed feed ingredients since there is over 6 percent grains (barley) included in the formula.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076586

A11

The products described as Salkavite, Folactin Red and Feromel are drug products that are subject to classification in Schedule 4, TSUS. Noting the exclusionary language in Headnote 1(a) set forth above, they may not be classified in Part 15 of Schedule 1, TSUS.

Feromel is a non-benzenoid iron supplement with honey and glucose and is classifiable as a drug in item 439.50, TSUS. See ORR 270/67 which held reduced iron to be a drug in item 439.50.

Folactin Red and Salkavite are vitamin and mineral supplements containing benzenoid vitamins (riboflavin, folic acid, B12 and E). They are classifiable under the provision for other benzenoid drugs in item 412.70, TSUS. See C.I.E. 1180/65 which classified a vitamin supplement as a drug in items 407.85 (412.70) or 439.50, TSUS.

You are directed to deny this protest except to the extent that reclassification of the feed supplements as set forth above results in a partial allowance. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

SUBJECT: Internal Advice Request No. 45/85 Concerning the Tariff Classification of Nunc Laboratory Plasticware Imported from Denmark

This request for Internal Advice was initiated by two letters from Mr. Rick St. Pierre, General Manager of Inter Lab, 187 East Wilbur Road, Suite 10, Thousand Oaks, California 91360. The importations were made in the name of Bear Medical Systems.

FACTS:

The instant merchandise is Nunc plasticware -- i.e., containers, flasks, dishes, plates and tubes imported from Denmark. The plasticware is used to transport biological specimens to clinical laboratories. The laboratories then let the specimens grow in the plasticware in order to diagnose and identify infectious organisms.

The inquirer claims that the merchandise is classifiable as containers of plastic, chiefly used for packing, transporting or marketing of merchandise, in item 772.20, Tariff Schedules of the United States (TSUS). The merchandise was liquidated under the provision for articles not specially provided for, of plastics, other, in item 774.55, TSUS, because it was considered to be more than containers.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A13

ISSUE:

Is the plastic disposable Nunc labware classifiable in item 772.20, TSUS, or in item 774.55, TSUS?

LAW AND ANALYSIS:

As noted in Customs Headquarters Ruling Letter (HRL) 073323 of June 26, 1984, classification of merchandise in item 772.20, TSUS, requires that the merchandise satisfy two requirements. The first requirement is that the items involved must be containers. The second requirement is that the items involved must be chiefly used for the packing, transporting or marketing of merchandise.

The Nunc plasticware is intended to function as a suitable environment for biological specimens. The plasticware and its contents also serve as an integral unit for analysis. The American Heritage Dictionary of the English Language defines "container" as "a thing in which material is held or carried; receptacle." The instant plasticware is more than a receptacle and more than a thing in which material is held or carried, therefore the Nunc plasticware is more than mere containers.

The inquirer claims that the chief use of the instant merchandise is to pack, transport or market merchandise. He states the following regarding the use of the Nunc labware:

> All Nunc plasticware is designed to transport liquids, cell cultures and suspensions, bacterial cultures and proteinasceous layers -- safely and conveniently, preserving the sterile integrity of the contained components....
>
> Basic research laboratories and industrial accounts use Nunc containers to store, grow, transport and market cells and liquids. Specific cell lines are generally sold this way.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076589

A14

> Private companies catering to the clinical market will commonly use Nunc petri dishes which contain selective agars for bacterial identification (for example, V.D., strep., etc.) to market their products in.
>
> Treated Nunc containers (immunoplastics) are also widely utilized by industry in the transportation and marketing of immobilized proteins used in RIA and EIA diagnostic procedures. This allows clinical laboratories who receive this material to diagnose and characterize infectious organisms in human serum.
>
> Lastly, Nunc produces transport containers... specifically designed for the safe transport of glass ampoules...specifically designed to preserve the integrity of the enclosed materials.

Customs Headquarters Ruling Letter (HRL) 073083, dated December 30, 1983, states that "When merchandise is susceptible to uses other than those which may qualify it for classification under a provision governed by chief use, and where the chief use provision would result in the imposition of a more favorable rate of duty, it is incumbent upon the importer to support such claimed classification with convincing evidence." The inquirer has not provided any hard evidence that the chief use of the containers is to pack, transport or market merchandise. Indeed, the descriptive literature and the above-mentioned statements indicate that the merchandise is at least as likely to be used within institutions for maintenance and testing of biological specimens as for packing, transporting or marketing merchandise.

The inquirer cites T.D. 56048(12) in support of his claimed classification. T.D. 56048(12) classified merchandise in item 772.20, TSUS, based on the premise that the articles were chiefly used to pack, transport, or market merchandise. That premise seems unwarranted regarding the Nunc labware.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B1

076589

Inasmuch as the Nunc labware is more than containers and inasmuch as it has not been proven to be chiefly used for the packing, transporting or marketing of merchandise, the Nunc plasticware is not eligible for classification in item 772.20, TSUS. Instead, we find that the Nunc plasticware is classifiable in item 774.55, TSUS.

HOLDING:

The Nunc laboratory plasticware is classifiable in item 774.55, TSUS. Please inform the inquirer of this decision.

Arthur P. Schaffner

Terminal Island, San Pedro 90731

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 2704-4-003248

This protest was filed against your decisions in the liquidation on June 1, 1984, of the following entries:

Entry No.	Date of Liquidation
83-672185	5-06-83
83-672183	5-04-83
83-672189	5-10-83
83-672190	5-11-83
83-672181	5-03-83

FACTS:

Certain footwear consisting of women's jogging shoes, stock Nos. 57111, 57116, and 57117 and youth's jogging shoes stock No. 56111, were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear involved is in chief value of leather and is properly classifiable as leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending or gender and value per pair.

ISSUE:

Do the cost breakdowns submitted by the inquirer show that the footwear is in chief value of leather?

B3

RELEASED TO THE

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on the matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

Analysis of Cost Breakdown on Stock No. 57111

The cost breakdown indicates that 1.552 sq. ft. was purchased for each pair of shoes. It states that 0.866 sq. ft. is incorporated in the shoes with waste of 0.686 sq. ft. The breakdown indicates no salvageable waste. The laboratory report shows that just 0.726 sq. ft. is present in a pair of shoes. That figure would imply a gross waste of 53 percent or a net waste of 114 percent when compared against the declared 1.552 sq. ft. amount for total leather.

Analysis of Cost Breakdown on Stock No. 57117

The cost breakdown for No. 57117 is the same as for No. 57111. The importer states that the two models are the same style except for differences in color. We have no laboratory report for No. 57117, but we assume, based upon the importer's statement regarding the similarity of the shoes, that No. 57117 would yield approximately the same implied waste percentages as No. 57111. The cost breakdown for No. 57117 indicates a cost for rubber/plastics which exceeds that of leather. The leather cost is shown as $0.966 plus $0.001 for punch hole on eyelet stay for a total of $0.967. Rubber/plastics is shown as $0.849 plus $0.03 for roughing EVA and rubber piece and $0.10 for cement EVA and rubber piece and buffing, for a total of $0.979. Once the leather in the cost breakdown is recalculated in accordance with the instructions in the telex of October 15, 1984, to adjust for excessive waste, the cost of rubber/plastics is clearly greater than the cost of leather.

B4

RELEASED TO THE PUBLIC

Analysis of Cost Breakdown on Stock No. 56111

The cost breakdown for No. 56111 shows 1.149 square feet of purchased leather with waste of 0.546 sq. ft. As in No. 57111/No. 57117, it indicates that none of the waste is salvaged. Again, this information is inconsistent with laboratory findings. The laboratory report shows just 0.534 sq. ft. in the shoe with an implied gross waste of 54 percent and net waste of 115 percent.

Analysis of Cost Breakdown on Stage No. 57116

Comparing, in similar fashion, the laboratory report with the cost breakdown on No. 57116, the implied gross waste on No. 57116 is 56 percent and the implied net waste for the shoe is 126 percent. The cost breakdown for No. 57116, even with its excessive implied leather waste, shows rubber/plastics to be slightly more costly than the leather, assuming that the $0.13 for "Roughing Eva and Rubber Piece" and "Cement Eva to Rubber Piece and Buffing" should be included in the rubber/plastics totals. When the leather costs are adjusted downward for excessive waste, in accordance with Headquarters' instructions, the ascendancy of rubber/plastics is even more clear.

As with Nos. 57111 and 57117, the cost breakdowns for Nos. 56111 and and 57116, even with their excessive implied leather waste show rubber/plastics to be more costly than leather based on our attributing the $0.13 for "Roughing EVA and Rubber Pieces" and "Cement EVA to Rubber Piece and Buffing" to the rubber/plastics totals. When the leather costs are adjusted downward for excessive waste there is even a greater disparity between the leather costs and the rubber/plastics costs.

It is to be noted that all the waste figures shown are substantially in excess of the limits considered reasonable by our telex of October 15, 1984, which specified that 47 percent gross waste or 89 percent net waste to be the maximum waste factors allowable absent plausible explanations for the excessive waste.

The protestant has offered the following as a plausible explanation for the waste figures being in excess of the maximums set forth in our telex of October 15, 1984:

BS

MAY BE RELEASED TO THE PUBLIC

076600

(1) The sizes of the sample shoes subjected to a laboratory analysis by Customs may differ from the sizes listed on the detailed component breakdowns submitted by the manufacturer.

(2) The process of disassembling a completed shoe and then measuring each piece of leather, as apparently performed by the Customs laboratory does not provide a totally accurate measurement.

(3) Such disassembled pieces may have been subjected to shrinkage, trimming, forming and change in shape so that an accurate measurement of the size of the original leather piece as cut from a pattern may be impossible to obtain.

(4) Photocopies of such disassembled pieces which we understand to be the basis for Customs laboratory measurements may further distort calculations since the photocopy process may slightly modify the size.

While the method of measuring the amount of leather present in the subject footwear may not be completely accurate, we are not persuaded that it was so inaccurate as to bring the excessive waste figures within the acceptable minimum waste allowances set forth in our telex of October 15, 1984. Also, we do not agree that loss of leather due to shrinkage, trimming, forming or other change provides a plausible explanation of the excessive waste figures in this instance.

In conclusion, it should be noted that all the cost breakdowns submitted by the protestant show that the footwear is in chief value of rubber/plastics even without the leather costs being adjusted for excessive waste.

HOLDING:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action be sent to the protestant.

Sincerely,

Arthur Scheiffler

Mr. Karl Spilhaus
President
Northern Textile Association
211 Congress Street
Boston, Massachusetts 02110

Dear Mr. Spilhaus:

This is in reply to your letter of July 18, 1985, concerning whether the processing of certain narrow elastic fabrics in this country will convert that merchandise into products of the United States and, thus, qualify it for treatment under item 807.00, Tariff Schedules of the United States (TSUS).

We understand that the merchandise is produced in Hong Kong, shipped to the United States for processing, and then sent abroad to be used in the manufacture of bras. The submitted sample, 1/2 inch elastic webbing No. HEI-101, is in the greige. Samples of the same material after processing and dyeing have also been submitted. It is stated that the greige material is not very clean -- oil still exists in the yarn, dirt and oil from the manufacturing process are still on the web, and the general overall appearance makes it unsuitable for sale due to being wrinkled and limp. Further, the greige fabric is stated to be unsuitable for the manufacture of bras because the stretch and the width of the fabric have not been stablized, the shrinkage has not been controlled, and the hand is too soft.

In the United States the merchandise is scoured in a chemical bath, rinsed, and dried prior to dyeing. The fabric is then run through another chemical bath containing fluorescent optical whiteners and/or dyestuff, and other chemical agents. It is squeezed to remove excess chemicals and liquids, and put through another chemical bath containing optical brightners. It is squeezed again and run through a closed steam chamber to prevent shrinkage. After rinsing it is again dried and subjected to a chemical bath containing a wetting agent and softeners, then dried again.

B1

It is the view of the Customs Service that the material, in the condition as originally imported into the United States from Hong Kong, is readily identifiable as bra strap material and would not reasonably be used for any other purpose. Accordingly, the subject material, having undergone the processing described above, has not been substantially transformed into a new and different article of commerce by means of substantial manufacturing or processing operations, in accordance with Section 12.130(b), Customs Regulations (19 CFR 12.130(b)). The manufacturing or processing operations performed in this country on that merchandise merely constitute an advancement of already dedicated material. As a result, the merchandise has not been converted into a product of the United States and is not eligible for classification under item 807.00, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Richard B. Platt
Specialty Auto Parts USA, Inc.
28314 Hayes Ave.
P.O. Box 306
Roseville, Michigan 48066

Dear Mr. Platt:

In your letter of May 22, 1985, you inquire as to the tariff classification of certain automotive parts from unspecified countries. Samples were submitted.

Sample 66038 SF is an internally threaded steel hex fastener approximately 1 1/4 inches long. It resembles a hex acorn nut but for the shank. Sample 66038 is identical except that it has a flat hex head and is slightly shorter. Sample 66021 is an aluminum fastener 4 5/16 inches long with one end hex shaped and the other end round. It is internally threaded at the round end.

Sample 66004 is a fastener, approximately 3 7/8 inches long and internally threaded at the round end. A 2 inch protrusion at the other end forms a handle. Sample 66036 is 3 5/16 inches long and identical to sample 66004, except that it has a detachable wing cap on one end. Sample 66006 is identical to sample 66036 except that it is 4 inches long.

The described samples are said to be used to attach valve covers to automobile engine blocks and are designed or intended for use with studs. We have considered the provision for nuts, of iron or steel, in item 646.56, Tariff Schedules of the United States (TSUS), as possibly applying. However, these articles do not come within the common meaning of the term "nut" for tariff purposes, nor is there any evidence that they are bought and sold or regarded as such in the trade.

The more specific tariff designation for these specially designed fasteners is under the provision for other fasteners or holders of base metal (except nuts) used with screws, bolts, or studs, in item 646.42, TSUS, dutiable at the rate of 6.2 percent ad valorem. The wing caps in samples 66036 and 66006 are classifiable, in accordance with a prior Headquarters ruling, under the provision for other parts of internal combustion engines, other than compression ignition engines, in item 660.67, TSUS, dutiable at the rate of 3.2 percent ad valorem. If from countries or territories listed on pp. 4 and 5 of the TSUS, such fasteners and wing caps would be free of duty under the Generalized System of Preferences (GSP), if otherwise found to be qualified. Copies of these pages, and the law and regulations relating to GSP, are enclosed.

B9

Samples 0395, 0365, 038SF and 0385, are slotted set screws. Despite their stated use in securing the valve covers, they are specifically provided for as iron or steel screws having shanks or threads not over 0.24 inch in diameter, in item 646.60, TSUS, dutiable at the rate of 6.8 percent ad valorem. Articles so classified are not subject to GSP.

Sincerely,

Arthur P. Schaffner

Re: Internal Advice 38/85, Petroleum Derivative Product Used as Feedstock or Motor Fuel

The imported petroleum product from Romania was variously invoiced as unleaded gasoline, unfinished naphtha, or unleaded blendstock.

In behalf of the importer it is urged that the imported petroleum derivative is not classifiable as motor fuel in item 475.25, TSUS, because the octane is too low: below 87. It is contended that as federal regulations require a retail service station to sell at least one grade of unleaded gasoline of not less than 87 octane, the import could not be chiefly used as motor fuel. It is further contended that as the national average for different brands of gasoline approaches 87.5 octane, this product can not be used as motor fuel. It is also stated that none of the imported product has been used as motor fuel in its imported condition but is used as a blendstock.

Therefore, in behalf of the importer it is urged that the imported product be considered a naphtha - either under item 475.35, as a petroleum naphtha, or item 407.16, TSUS, as a benzenoid mixture.

In order for the product to be considered a benzenoid mixture in item 407.16, TSUS, it would have to be synthetically produced and possess a significant amount of dutiable benzenoids. There is no evidence that this petroleum product meets this test. Therefore, it is not classifiable in item 407.16, TSUS. As for classification in item 475.35, TSUS, petroleum naphtha, it cannot be classified in that provision if it meets the standards for motor fuel, item 475.25, TSUS.

The test reports on this imported petroleum product show that it meets the current standards published as ASTM D439 for automotive gasoline. Therefore, as this product meets these standards, it is classifiable in item 475.25, TSUS. You should advise the internal advice applicant of this decision.

Sincerely,

Mr. Robert T. Stack
Siegel, Mandel & Davidson, P.C.
One Whitehall Street
New York, New York 10004

Dear Mr. Stack:

This refers to your requests of August 1, 1985 and November 14, 1985, for reconsideration of two Customs Rulings, Nos. 813725 and 813727, both of May 31, 1985.

The merchandise under review consists of a man's jacket and vest, both chiefly of cotton. Both styles have a 3-inch wide textile placket made from the same fabric as the outer shell which is attached to the body of the garment by metal snaps and partially covers a full-front, zippered opening. The top part of the zipper is covered by a double collar construction which combines a rib knit collar and a second collar, which if worn in an up position will function as a storm collar, held in place with a textile tab and snap. The placket extends upward from the top of the waistband to about an inch below the neck tab closure.

Both garments were ruled to be classifiable under provisions for ornamented apparel because of the presence of the partial plackets. The plackets were held to be ornamentation because they do not extend the entire length of the zippers.

The test for determining what constitutes ornamentation is found in Blairmoor Knitwear Corp. v. United States, 60 Cust. Ct. 388, C.D. 3396 (1968). In applying the principles in that case to the present circumstances, it must be determined whether the placket primarily enhances or adorns the jacket or whether any decorative effect it may impart is merely incidental to its utilitarian function.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B12

You assert that the textile placket covering the zipper on each garment is functional for purposes of providing additional warmth and does not constitute ornamentation. You further state that the functionality of the placket would not be at issue if the placket had covered the entire length of the zipper.

Both the jacket and vest are designed for wear in cold weather. Warmth is a primary consideration. The placket over the zipper in each instance serves the very useful function of providing additional protection against the cold. Even though the textile placket itself does not cover the entire zipper, its contribution to each garment is substantial. Further, considering the overall appearance of the plackets on the garments, their decorative effect does not appear to be significant.

Therefore, the plackets in question on the man's jacket and vest primarily serve to create a double front closure in conjunction with the collar and functions to prevent heat loss through the entire length of the zipper.

Pursuant to Section 177.9(d), Customs Regulations (19 CFR 177.9(d)), the Customs Rulings in question are hereby modified to reflect that the garments, style nos. 3531 and 0057, which are the subjects of those rulings, are classifiable under the provisions for nonornamented wearing apparel.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Leonard L. Rosenberg, Esq.
Sandler & Travis, P.A.
444 Brickell Avenue
Miami, Florida 33131

Dear Mr. Rosenberg:

This is in reply to your letter of August 7, 1985, on behalf of Penntex, Inc., requesting that Customs reconsider a decision by the District Director, San Juan, Puerto Rico, concerning the tariff status of certain cotton terry towelling material imported from Pakistan and manufactured into terry towels in a foreign trade zone in Mayaguez, Puerto Rico.

You state that the fabric concerned is one hundred percent cotton terry cloth, woven, in continous lengths, and in widths that may vary from 40 inches to 52 inches. The fabric is woven in a pattern that clearly identifies the terry towels to be made from that fabric. Nonterry (flat woven) strips separate the towel sections. The large terry sections alternate with three small terry strips that are approximately 1-3/4 inches 2-1/2 inches wide. In a conference, you indicated you did not know what those small sections would be used for. The pattern is repeated throughout the length of the material. You emphasized that the merchandise will be imported in either two towel or three towel widths.

You state that in most instances the fabric will be converted into towels in the foreign trade zone, but there is a possibility that a small amount will be used to make other products. A sample baby bib was submitted.

When viewing the submitted fabric sample, it is evident to Customs that the fabric as imported into the foreign trade zone has no real commercial value for the manufacture of any article other than towels. The cutting lines are clearly defined. The fabric is dedicated to the manufacture of towels when imported into the foreign trade zone and the mere cutting and hemming of towels from that fabric does not amount to a substantial transformation of that fabric.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B14

The merchandise, at the time of importation into the zone, is properly considered to be unfinished towels. United States v. Buss & Co., 5 Ct. Cust. Appls. 110, T.D. 34138 (1914); United States v. M.H. Rogers, Inc., 18 CCPA 271, T.D. 44448 (1930).

Your reliance on Belcrest Linens v. United States, Appeal No. 84-734 (Fed. Cir., decided August 21, 1984), is misplaced. In that case, the fabric was not only cut into pillow cases, but it was also stitched to form the article and the open edges were scalloped. Further, the court found that there existed a real commercial use of the fabric in the manufacture of articles other than the ultimate pillow cases. Clearly, that decision is not controlling on the instant set of facts.

Considering all the factors set out in Section 12.130, Customs Regulations (19 CFR 12.130), concerning the criteria for determining the country of origin of merchandise, it is our view that the mere cutting and hemming of towels in a foreign trade zone from fabric which enters that zone with pre-determined cutting lines woven into the fabric does not amount to a substantial transformation of that fabric in the zone, and the resulting towels leaving the zone are considered to be products of the country where the terry towelling material was woven.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3801-5-000759

This protest was filed against your decision in the liquidations on December 7, 1984, of entry No. 84340058 dated March 12, 1984, and entry No. 84340194 dated March 20, 1984, covering shipments of polystyrene plastic containers manufactured in Canada.

FACTS:

The merchandise involved designated as "Rolykit cosmetic case model 683" or "Amway Corp. #X7767" measures 8 3/4 inches by 5 inches when closed. It is made of non-transparent rigid plastic. The manufacturer is the owner of a unique patented system which allows the article to be folded up. This case can be carried by means of the flip down handle which is affixed thereto.

This cosmetic case was classified in liquidation under the provision for other luggage of other materials in item 706.62, Tariff Schedules of the United States (TSUS).

The protestant claims that the merchandise is properly classifiable under the provision for other household articles not specially provided for, of rubber or plastics in item 772.15, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C2

ISSUE:

Is the cosmetic case designed to contain personal effects during travel?

LAW AND ANALYSIS:

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides that "For the purposes of the tariff schedules - - (a) the term 'luggage' covers — (i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel."

The advertising material for the instant cosmetic kit reads as follows:

> Gives you everything at your fingertips for a beautiful look and the flip-up mirror lets you see how lovely you are. Sleek polystyrene styling. Carry it anywhere with the flip-down handle. Five specially linked trays with movable partitions fulfill your cosmetic and jewelry storage needs. See them all at a glance, then roll it up into one sleek case.

Based on an examination of a sample of the merchandise in issue and the above-quoted advertising material, it is our view that the cosmetic case fits within the definition of luggage for tariff purposes. Specifically, the flip-down handle and the foldable nature of the case show that it was designed primarily to contain personal effects during travel.

HOLDING:

The cosmetic case was properly classified in liquidation under item 706.62, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076792

C3

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P Schaffner

Mr. Joel K. Simon
Serko, Simon & Abbey
1 World Trade Center
Suite 3371
New York, New York 10048

Dear Mr. Simon:

Your letter dated July 17, 1985, addressed to our New York office, regarding the classification of certain articles marketed as "Preserved Personalities," has been referred to our office for direct reply to you.

You assert that the merchandise should be classified under the provision for other textile articles, whether or not ornamented, of man-made fibers in item 386.1343, Tariff Schedules of the United States (TSUS), which allows duty-free treatment for such merchandise produced in Taiwan under the Generalized System of Preferences.

The issue presented by your request is whether this merchandise is chiefly used for the purpose of amusement and therefore classifiable as a toy under the provision for other toys not specially provided for in item 737.95, TSUS.

The court in United States v. Topps Chewing Gum Inc., 58 CCPA 157, C.A.D. 1022 (1971), considered what should be considered a toy for tariff classification purposes. The merchandise involved in that case was buttons with amusing savings written on them. The court stated that "if the purpose of an object is to give the same kind of amusement as playthings give, its purpose is amusement, whether the object is to be manually manipulated, used in a game, or as here, worn." The court considered that the "frivolous enjoyment" derived from the buttons is the same kind derived from objects commonly thought of as toys. This is a relevant consideration for the case at hand. The stuffed torso in a plastic dome container is given as a gift to an appropriately identified recipient for purposes of amusement in relation to that recipient's profession.

The marketing of "Preserved Personalities" in card and gift stores, rather than toy stores, is not a dispositive factor in determining their classification. That the torso of the article is passive and essentially nonmanipulative is not indicative of its potential for amusement. Neither of these factors discourage consideration of the "Preserved Personalities" as toys.

cs

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Therefore, the merchandise subject to your inquiry, should be classified under the provision for other toys not specially provided for in item 737.95, TSUS, and dutiable at the 1985 rate of 9.6 percent ad valorem.

Our consideration of this matter does not extend the time limitations placed upon filing a protest nor does our consideration create a right to litigate this matter in connection with liquidations for which a timely protest has not been filed.

Sincerely,

Arthur P. Schaffer

Mr. Bill Bickle
385 Linwell Road
St. Catharines, Ontario L2M 2P3
Canada

Dear Mr. Bickle:

You have requested a ruling on the tariff classification of trunks for Model A Fords that will be partially manufactured (without hardware) in Canada.

This article is classifiable under TSUS item 692.32 as other parts of motor vehicles. While it is true that the trunk is not strictly necessary to the safe and efficient operation of the automobile, it does serve a significant useful function in relation to it by making possible the carrying of tools, personal belongings, and other merchandise. Once attached, the trunk is not ordinarily removed from the vehicle, for which it is specifically designed. Furthermore, it lacks a handle and weighs too much to be carried. Thus, it is not considered to be luggage.

The 1986 column 1 rate of duty for item 692.32, TSUS, 3.2 percent, is scheduled for further reduction to 3.1 percent in 1987.

Sincerely,

Arthur P. Schaffner

Re: Internal Advice 73/85; Classification of Storalene

Dear Sir:

This internal advice involves the classification of a product known as Storalene 555. This product is used as a substrate or backing for vinyl wall covering materials. It is imported by Stora Kopparberg Corporation of Stamford, Connecticut. It is comprised of a blend of approximately 65 percent cellulosic wood pulp fibers and 35 percent man-made fibers. The textile fibers generally exceed 6 millimeters in length and are not digested in the pulp making process. The wood pulp fibers are generally less than 4 millimeters in length.

On two occasions, (Headquarters Ruling Letters 020956, dated November 13, 1972, and 064032, dated April 11, 1980) a product called Storalene has been classified by Customs as papers, impregnated or coated ... : other, not specially provided for: not lithographically printed: impregnated, coated, or both: not gummed, under the provisions of item 254.80, Tariff Schedules of the United States, (TSUS). Currently, articles classifiable under item 254.80 are dutiable at the rate of 0.4 percent ad valorem.

The Dexter Corporation (Dexter), a domestic manufacturer of a similar product called Dexter Grade 3549, made an inquiry with Customs regarding the classification of Storalene. In Headquarters Ruling Letter 073555, dated May 29, 1984, Dexter Grade 3549 was found to be classifiable as nonwoven fabrics ... of textile materials, whether or not coated or filled: of man-made fibers, under the provisions of item 355.25, TSUS, dutiable at the 1986 rate of 2¢ per pound plus 12.9 percent ad valorem. Products classifiable under this item number are also subject to quantitative limitations pursuant to textile category 669.

The Dexter product was comprised of 12 percent polyester fibers by weight. The textile fibers averaged 6 millimeters in length. The product was used in hospital gowns and surgical drapes.

C8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

As a result of the Dexter inquiry, Customs reassessed the classification of Storalene and determined that the textile classification was more appropriate. Stora Kopparberg was notified by Customs of the intended reclassification. In response to such notice, counsel for Stora Kopparberg has requested that, in light of prior rulings, Internal Advice procedures be invoked to settle the matter.

Counsel avers that an established and uniform practice exists for the classification of Storalene. If, pursuant to the provisions of section 315(d) of the Tariff Act of 1930, (19 U.S.C. 1315(d)), there is such a practice, then Customs will be required to publish a change of practice in the Federal Register and invite public comment. Additionally, issuance of an Internal Advice ruling considering the merits of the change in classification would be premature.

Counsel bases his claim of the existence of a practice on two grounds. First, the Secretary, pursuant to the provisions of 19 U.S.C. 1315(d), has made a finding of an established and uniform practice in this instance. Second, in the absence of a formal "finding", he asserts that there is an established and uniform practice for the classification of Storalene based on continuous entry and liquidation of this product as coated or impregnated paper under the provisions of item 254.80, TSUS.

In Asiatic Petroleum v. United States, 59 CCPA 20, C.A.D. 1029 (1971), the court found that a letter written by the Acting Commissioner of Customs acknowledging the existence of "an established and uniform" practice was sufficient evidence to prove that the Secretary of the Treasury had made a finding that such a practice existed. Counsel posits that if a written acknowledgement is sufficient proof to sustain a finding of a practice, then years of continuous importation of a product in conformance with binding Headquarters ruling letters should also be sufficient proof upon which to base a finding of the existence of an established and uniform practice.

In further support of his claims, counsel references the fact that Customs issued ruling letters 020956 and 064032 to his client classifying Storalene as coated or impregnated paper. The first of these ruling letters was issued in 1972. The subsequent ruling letter was issued to Stora Kopparberg in 1979. Headquarters Ruling Letter 032797, dated April 3, 1975, is alleged to be consistent with these rulings in finding that "certain non-woven fabrics" manufactured on a papermaking machine by a process similar to papermaking were classified under item 254.80. The examined sample in the 1975 decision was found to be 60 percent polyester fibers, 22 percent paper fibers and 18 percent resinous binder.

076899

C9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Counsel's reasoning is not persuasive. He presents no evidence to establish that the Secretary of the Treasury or his delegate has made a finding of a practice with regard to Storalene. No decision regarding the classification of Storalene has ever been published. Other Headquarters ruling letters (061187 dated June 19, 1979, and 065193 dated February 17, 1981, a reconsideration of the former decision) have specifically held similar products to be textiles rather than paper. We therefore find the Secretary has not made a finding that an established and uniform practice exists with regard to the classification of Storalene.

We concur that an established and uniform practice can be shown by actual uniform liquidations, even though the Secretary of the Treasury has made no 'finding' that such a practice existed. Heraeus-Amersil, Inc. v. United States, 8 CIT ___, 600 F. Supp. 221 (1984), clarified by Slip Op. 85-88 (1985). The Court can make the determination on a case-by-case basis according to certain guiding principles. Factors to be considered are the number of entries resulting in the alleged uniform classifications, the number of ports at which the merchandise was entered, the period of time at which the alleged uniform classifications took place, and whether there had been any uncertainty regarding the classification over its history. Heraeus-Amersil, supra., Slip. Op. 85-88.

There is no evidence to indicate that Storalene was entered at any port save New York. We are informed by the National Import Specialist that the entries have been continuous, but not in large numbers. As noted above, there has been uncertainty over the classification, in that like articles have been held to be textiles for classification purposes. Accordingly, we find, as a matter of law, that an established and uniform practice regarding the classification of Storalene does not exist.

The next issue involves the correctness of the classification of Storalene. Headquarters Ruling Letter 061187 held that the length of the fibers was a determinative characteristic as to whether a product was textile or paper. Nonwoven textiles contain fibers which generally range from 6 to 12 millimeters in length. Cellulosic fibers are generally 1 to 4 millimeters in length. Headquarters Ruling Letter 065193 flatly held that "material with textile fibers in excess of 4 millimeters which are not digested is not paper."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076896

C10

Additionally, the Dexter Grade 3549, which contained 12 percent polyester fibers by weight, was held to be a textile fabric. A fortiori, Storalene, similarly constructed, but with 34.6 percent by weight polyester fibers, should be considered a fabric.

Textile fibers add characteristics to the product which are not found in mere papers. Specifically, the textile adds strength and flexibility to Storalene to enable its use as a backing for vinyl wall coverings. Further, the product is marketed as a fabric. It should be noted that descriptive literature of Storalene published by the importer refers to it as a fabric. These factors cannot be ignored when considering classification.

Counsel claims that the method of manufacture should be a determinative factor in the classification of Storalene. Headquarters Ruling Letters 061187 and 065193 involved products that were made on a rotoformer, a device which is a modified papermaking machine. Inasmuch as Storalene is manufactured on a papermaking machine, counsel avers that classification as a textile should be precluded.

Customs has ruled that in order to be classifiable as paper, a product must be manufactured on an unmodified papermaking machine. This mandatory language precludes classification as paper of a product made on a modified papermaking machine. By contrast, a nonwoven fabric may be produced by equipment which, though similar to that used in the manufacture of paper, is modified to produce nonwovens. See Headquarters Ruling Letter 061187. Contrary to classification of paper, the classification of textiles is not dictated by the method of manufacture. The mere production of a product on a papermaking or modified papermaking machine does not preclude its classification as a textile. Because of this distinction, we are of the view that the method of manufacture, while influential in the classification of the product, should not be determinative.

Accordingly, we are of the view that the subject storalene is classifiable as nonwoven fabrics ... of textile materials, whether or not coated or filled: of man-made fibers, under the provisions of item 355.25, TSUS, dutiable at the 1986 rate of 2¢ per pound plus 12.9 percent ad valorem. Products classifiable under this item number may also be subject to quantitative limitations pursuant to textile category 669.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076899

C11

Finally, counsel notes that if the classification of Storalene as a textile fabric is upheld, Stora Kopparberg is entitled to classification under item 254.80, TSUS, of all entries made prior to issuance of a notice from Customs Headquarters modifying or revoking Headquarters Ruling Letter 064032. Such notification is required pursuant to section 177.9(d) of the Customs Regulations (19 CFR 177.9(d)) in order to repeal the effect of the earlier ruling as to future entries. We concur. Accordingly, Headquarters Ruling Letter 064032 is revoked. Counsel shall be notifed of the effective date of revocation.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

076950

[redacted]

Dear [redacted]

In your letter of September 10, 1985, you requested, on behalf of your client, [redacted] a ruling on whether certain processing operations result in a substantial transformation for country of origin purposes.

The following processing will be performed on standard black plain end steel pipe, ASTM A-120 specification, imported into [redacted]

1. Cut each 20 foot length of pipe into two lengths of 9 feet 11 inches.

2. Thread and ream newly cut ends.

3. Degrease and wash; pickle by immersion in sulfuric acid to remove rust and scale.

4. Galvanize by hot dip in molten zinc after washing, coating with flux, and preheating to 250°F. Blow off excess zinc.

5. Reheat threaded ends and blow off excess zinc.

6. Immerse in chromic acid; varnish.

7. Test, label, and add coupling to one end and a protective cap to the other.

The resulting product is known as rigid electrical steel conduit which will meet the U.L. 6 standard, as well as Federal Specification WW-C-581D and ANSI C80.1. It will be used in construction and other areas where rigid electrical steel conduit is required as a raceway for wires or conductors of electrical current. The costs of processing performed in [redacted] will be approximately 50 percent of the value of the completed conduit.

It is your conclusion that these processing operations substantially transform the black plain end steel pipe into a new and different article, having a distinctive name, character, or use. Anheuser-Busch Brewing Association v. United States, 207 U.S. 556 (1908).

MAY BE RELEASED TO THE PUBLIC

C13

The cutting to length, threading, reaming, and pickling do not change the imported black plain end pipe into a product of [redacted] These operations are finishing operations that do not affect the underlying nature of the article as "pipe." The additional processing by galvanizing and related processes (fluxing, preheating, hot dipping, chromating and varnishing) presents a novel issue. It is this series of operations that, according to your statements, dedicates the pipe to a specific commercial use. Although other uses are not precluded, it is stated that the commercial realities (primarily the cost of galvanized pipe, the specific lengths, and the UL label) identify the product as rigid electrical conduit. Other uses would be secondary, if not merely fugitive, uses.

Galvanized pipe is used in numerous other applications. Galvanizing, whether hot dip or otherwise, is a treatment that gives surface protection to a product such as steel pipe. The process by which a protective zinc layer is added to the pipe is relevant to its effectiveness and durability. Hot dip galvanizing gives a more durable protection because it involves the interpenetration of the surface layer of ferrous molecules by the zinc. The nature of hot dip galvanizing for rigid electrical conduit is such that it must give a protective coating that is at least 0.0008 inch (0.02mm) thick and evenly distributed to give a smooth surface finish. This standard must be met in order for the pipe to be labeled and used in the industry as rigid electrical conduit (galvanized). Galvanized pipe that does not conform to this standard has other uses such as fencing, water well pipe, plumbing pipe, sprinkler pipe, and heating pipe. Furthermore, galvanized pipe which is not rigid electrical conduit is classified under a statutory provision that does not distinguish between black plain end steel pipe and galvanized threaded steel pipe. Classification as rigid electrical conduit in item 688.30, TSUS, is a special provision that has been held to encompass pipe that meets certain safety and technical standards for galvanizing, flexibility, and threading. Other features of conduit involve relatively minor operations of deburring and grinding to remove rough edges or protrusions which could cause damage to insulation on electrical wires as they are pulled through the conduit.

While the 0.0008 inch minimum thickness is a requirement for rigid electrical conduit (galvanized), the underlying metallurgical structure of the pipe is the controlling character of the pipe in this case. We recognize that rigid electrical conduit requires a protective coating, whether zinc, enamel, or an equivalent coating, and that such a coating must meet certain standards for thickness, eveness, and durability (as measured, for example, by the effects of aging, bending, and heat). They are enhancements of the underlying product, the pipe, and they can further limit the commercial applications for the pipe. However, these advancements ordinarily do not advance a steel product beyond its basic form. For example, steel pipe similar to that in this case is classified in item 610.32, TSUS, and assessed duty at 1.9 percent ad valorem, whether or not galvanized by hot dipping in molten zinc.

RELEASED TO THE PUBLIC

076950

C14

Rigid electrical conduit can be formed, for purposes of the U.L. and other standards, by less costly methods. In fact, the zinc material, the coupling added to each conduit section, and the shipping costs account for more than half of the value added to the pipe in [redacted] Further review of the nature of the processing operations in [redacted] leads us to the conclusion that they are not substantial. We distinguish our decision of November 21, 1985 (file 553739), because the processing in issue, the quenching and tempering together with the upsetting and threading of green tube, was a substantial processing operation resulting in a new and different article having a distinct metallurgical structure which gave it the tensile strength required for API pipe. In this case, the underlying metallurgical nature of the steel pipe is significant and bears directly on whether the product, when coated, will be suitable for use as rigid electrical conduit. The cutting, threading, and galvanizing, therefore, do not change the origin of pipe imported into [redacted]

Black plain end pipe, imported into [redacted] from [redacted] is not substantially transformed by cutting, threading, hot dip galvanizing, chromating, varnishing, and assembly to a coupling, and it does not thereby become a product of [redacted] For purposes of the steel restraint arrangement between the United States and [redacted] the pipe is a product of [redacted]

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Miss Judie Hammond
Secretary to Trade Commissioner
New Zealand Consulate General
Alcoa Building Suite 970
One Maritime Plaza
San Francisco, California 94111-3476

Dear Miss Hammond:

This is in further response to your letter of June 26, 1985, which the New York Region has referred to us for reply and which concerns the dutiable status of whirlpool baths. More specifically, the merchandise consists of fiberglass tubs with various ports in a corner model designated the Cygnet, in an exposed side and front model designated the Kora, and in enclosed models designated the Ibis and Osprey.

These tubs are classifiable under the provision for household articles of plastics, not specially provided for, (n.s.p.f.), in item 772.15, Tariff Schedules of the United States (TSUS). The current column 1 rate of duty required under that provision and applicable to products of New Zealand is 4 percent ad valorem. Faucets and mechanical drains which are in chief value of copper are classifiable under the provision for hand-operated taps or valves of copper in item 680.14, TSUS, requiring a current column 1 rate of duty of 6.1 percent ad valorem. If gold plated and gold represents the metal in chief value, classification would be under the provision for other taps and valves in item 680.19, TSUS, requiring a column 1 rate of duty of 5.2 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D2

The pumps are classifiable under the provision for pumps for liquids in item 660.97, TSUS, dutiable at the current column 1 rate of 3.3 percent ad valorem. The wood supporting frames are classifiable under the provision for articles of wood, n.s.p.f., in item 207.00, TSUS, dutiable at the column 1 rate of 5.5 percent ad valorem.

Sincerely,

Arthur P Schaffner

Paul S. Haar, Esq.
Thorpe, Reed & Armstrong
1667 K Street, N.W.
Washington, D.C. 20006

Dear Mr. Haar:

In your letter of September 11, 1985, on behalf of your client, John Harmsen Associates, Inc., you requested a ruling on the tariff classification of a fastener known as "Plastirail."

The fastener is designed for anchoring rail components in concrete and other materials. It consists of a square washer-head shoulder fastener with a square or acme-type thread and a blunt point, and an internally threaded sheath with a threaded plastic interior and a ribbed metal exterior. The fastener measures 13/16 - 7 by 4-5/16 inches. The sheath measures 1-7/8 inches by 4-1/4 inches.

The fastener is a screw. It is designed to be torqued by the head, and, as such, is classifiable as a screw.

The sheath is a fastener or holder used with screws. It is not classifiable as an entirety with the screw because the identity of neither has been merged into that of the other. The screw remains identifiable as a screw, and the fastener or holder retains its identity as such.

Therefore, the screw is classified under the provision for steel screws in item 646.63, Tariff Schedules of the United States (TSUS). The holder, if in chief value of the base metal casing, is classified under the provision for fasteners or holders (except nuts) used with screws in item 646.42, TSUS; if in chief value of the plastic component it is classified under the provision for articles of plastic in item 774.55, TSUS.

Sincerely,

Arthur P. Albertini

District Director of Customs
477 Michigan Avenue
Detroit, Michigan 48226

Re: Decision on Request for Internal Advice No. 85-33

Dear Sir:

In a memorandum of March 5, 1985, you requested advice on the classification of three locomotives, three tenders, and fourteen passenger coaches designed for use on narrow-gauge rails. The merchandise was entered through the port of Detroit in five shipments in 1983 and 1984. The entries are unliquidated. However, the importer has filed protests:

Protest	Entry
3801-5-000967 of 2-18-85	345803 of 10-21-83
3801-5-001358 of 2-25-85	336957 of 11-29-83 338023 of 01-06-84 339266 of 02-16-84
3801-5-001907 of 5-14-85	340029 of 03-12-84

On February 26, 1985, the importer filed with the Court of International Trade a complaint seeking to have all five entries deemed liquidated by operation of law under 19 U.S.C. §1504(a). On May 15, 1985, the first protest was denied by you. In Detroit Zoological Society v. United States, ___ CIT ___ (Slip Op. 86-23, decided February 28, 1986), the court dealt with the jurisdiction issue. Because the entries are unliquidated, we have decided to address the classification issues raised by this request. This ruling is our decision on the classification issues raised by the importer.

FACTS:

The merchandise consists of three locomotives with tenders, and fourteen passenger cars, two of which are designed for use by handicapped persons in wheelchairs. Each locomotive, together with its operator's compartment (the tender) is 27 feet in length, weighs 8 tons, and is powered by an automotive

DS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

gasoline engine and automatic transmission. It is designed for 30-inch gauge track. Each tender is designed to operate with an engine, and provides seating for the operator and two other persons.

The passenger cars are open-side, covered coaches, approximately 82 inches high with step-up entrances to individual bench seats. There are no doors. Two of the cars are specially designed for access by persons in wheelchairs. The cars are designed to be coupled to the locomotive/tender and to each other by a drawbar secured by a 3/4-10 by 5-1/2 inch bolt and matching nut. There are two trucks per car. Each car is braked by a single pneumatic cylinder on each side of every truck. Dual lines connect the braking system to a compressor located on the locomotive.

Each locomotive can pull a maximum of 7 cars. There is no interior lighting system for the cars. There is a safety signal flasher that is hand-operated by an employee to alert the operator to safety problems. The train is designed and intended for use on 30-inch gauge track.

The importer, through its counsel, has stated that the imported "zoo train" does not consist of a locomotive and railway rolling stock within the meaning of the provisions in items 690.05 and 690.15, Tariff Schedules of the United States (TSUS).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D6

877005

077005

The importer asserts that the locomotive and cars are classified in item 678.50, TSUS, and, additionally, in item 851.60, TSUS. In the alternative, the importer asserts that the proper classification is in item 692.60, TSUS.

ISSUES:

Is the merchandise described in the provisions for locomotives and railway rolling stock, in items 690.05 and 690.15, TSUS? If not, is it classified as an entirety in item 678.50, TSUS, absent a more specific provision, or are the locomotive and cars separately classified.

If the cars are separately classified from the locomotive, are they described under the provision for vehicles (including trailers), not self-propelled, not specially provided for, in item 692.60, TSUS?

Finally, are the provisions in items 851.60 and 960.15, TSUS, applicable?

LAW AND ANALYSIS:

Item 690.05, TSUS, provides for rail locomotives and tenders. Item 690.15, TSUS, provides for railroad and railway rolling stock: passenger cars, not self-propelled. Tariff terms are construed according to their common and commercial meanings, which, absent evidence to the contrary, are considered to be the same.

The term "locomotive" means, in its broadest sense, "self-propelled engine." It is ordinarily used when referring to an engine that operates on rails to pull cars. The

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC.

D1

500470

engine in issue operates on rails, is self-propelled, and pulls passenger cars. There is nothing in the legislative history for rail locomotives (and tenders) of item 690.05, TSUS, which would preclude classification of this lightweight engine under that provision. The tender is clearly a vehicle essential to the engine. Without the tender there would be no seating for the operator. Therefore, the engine and tender are a rail locomotive and tender classified under the provision for such vehicles in item 690.05, TSUS.

The terms "railroad," "railway," and "rolling stock" have meanings which, as above for locomotive, have not been narrowed by the benefit of legislative history or by evidence of an overriding commercial significance. Use of the terms "railroad" and "railway" lead us to conclude that the drafters intended to cover both the equipment that runs on heavy, large gauge rails, and the equipment that runs on lighter, smaller gauge rails.

The term "rolling stock" applies very simply to equipment that runs on railroads or railways. There is no significant limitation by which we can justifiably exclude these vehicles that run on rails. The length of the line, the gauge of the track, and the apparent limited utility of the cars in this case are insufficient evidence for us to narrow the meaning of the provision for railroad and railway rolling stock. Therefore, we conclude that the passenger cars are classified as railway rolling stock (passenger cars), not self-propelled, in item 690.15, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

D8

Classification in item 851.60, TSUS, is precluded by Headnote 6(a)(ii), Part 4, Schedule 8, which states that the term "instruments and apparatus" in item 851.60 applies only to certain provisions in Schedule 6. Part 6 of Schedule 6 is not included in the list.

Classification in item 960.15, Appendix to the Tariff Schedules (a provision in effect at the time of entry), is not applicable. There is no evidence that these are anything more than passenger cars with the added capability of providing access for wheelchairs.

HOLDING:

The self-propelled engines and tenders are classified as rail locomotives and tenders in item 690.05, TSUS. The passenger cars are classified as railway rolling stock (passenger cars), not self-propelled, in item 690.15, TSUS.

Sincerely,

Arthur P. Schaffer

077008

TO : District Director of Customs
110 S. Fourth Street
Minneapolis, Minnesota 55401

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 71/85 Concerning the Tariff Classification of Double-Injection Moon Boots and Whether An Established and Uniform Practice Exists to Classify These Boots Under Item 700.56, Tariff Schedules of the United States (TSUS)

FACTS:

The moon boot involved, manufactured in Korea, is a winter boot constructed by sewing a molded plastic shell bottom to a non-molded plastic shaft. The upper material of the shaft ends at a point just below where it has been sewn to the sidewall of the shell, rather than continuing down to the insole. In T.D. 81-79 this office ruled that with respect to this construction that the sidewall of the shell did not constitute a foxing or foxing-like band. However, this boot differs from the boot ruled on in T.D. 81-79 in that it has a separately molded contrasting color outsole which overlaps the upper.

The inquirer maintains that the double-injection moon boots do not have foxing or a foxing-like band and are properly classifiable under the provision for other footwear which is over 50 percent by weight of rubber or plastics or over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber of plastics and having uppers of which over 90 percent of the exterior surface area is rubber or plastics in item 700.56, TSUS.

DOCUMENT MAY BE RELEASED TO THE

D10

The inquirer also claims that an established practice exists to classify this footwear under item 700.56, TSUS.

It is your position that these double-injection moon boots have a foxing-like band which would preclude their classification under item 700.56, TSUS. You propose classification of these boots under the provision for other hunting boots, galoshes, rainwear, and other footwear designed to be worn over or in lieu of other footwear as a protection against water, oil, grease, or chemicals or cold or inclement weather in item 700.57, TSUS.

071708

ISSUE:

1. Was a clear impression given by Customs in T.D. 81-79 and T.D. 83-116 that these moon boots are classifiable under item 700.56, TSUS?

2. Does an established and uniform practice exist to classify double-injection moon boots under item 700.56, TSUS?

LAW AND ANAYLSIS:

T.D. 81-79 held that a moon boot shell did not simulate the function of foxing which is "to reinforce or supplement the juncture between the sole and upper," because the upper did not extend down to the insole. Thus, it was held, "the sides of the shell bottom do not overlap the upper at this point." In effect it was found that the sides of the shell bottom which were under consideration as foxing-like were themselves the upper in that area between where the shaft ended and the outsole began. This concept was further amplified in subsequent rulings (including T.D. 83-116) covering moon boots in which a raised lip or ridge existed at the joint of sole and upper. Those rulings held that while the ridge was molded at the sole it could not be said to overlap the upper because it was "an integral part of the combined sole and upper."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D11

It should be noted that nowhere in either Treasury Decision is there a reference to a two-step molding process. In fact, the key element in both decisions was the lack of a pre-existing upper in the areas which were being overlapped. Specifically, in T.D. 81-79 it was stated that had there been a complete upper the shell would have been considered foxing-like. In T.D. 83-116 the molded-in band could only have been an "integral part of the combined sole and upper" if it was created simultaneously with the shell. Furthermore, if T.D. 81-79 had covered two-step molded bottoms the whole issue of raised ridge moon boot bottoms would not have arisen in T.D. 83-116.

The inquirer asserts that a clear impression had been given by Customs that these moon boots were classifiable under item 700.56, TSUS. This claim appears to be derived from case of Heraeus-Amersil, Inc. v. United States, Slip. Op. 84-134 (1984), wherein the court, in discussing whether a finding of a practice by the Secretary of the Treasury had been made, noted that "the proper test for a section 1315(d) finding is merely whether a clear impression is given through appropriate language that such a finding is being made." No such finding has been made in this case. On the contrary, as indicated is the foregoing discussion of T.D. 81-79 and T.D. 83-116, the types of constructions involved in those decisions was discussed in substantial detail and did not include the constuction variant before us now.

The inquirer claims that an established and uniform practice exists based on uniform liquidations. As evidence the inquirer has presented thirteen entries from Korea and six from Italy imported through two ports over a two year period. In the case of Heraeus-Amersil, Inc. v. United States, Slip. Op. 85-60 (1985), the court indicated that the determination

D12

RELEASED TO THE

as to whether a practice exists must be made on a case-by-case basis. However, several factors may be considered in making that determination. These factors are as follows:

(1) the number of entries,
(2) the period of time; and
(3) whether there had been uncertainty regarding the classification of the merchandise over its history.

In reaching its decision the court referred to the case of Washington Handle Co. v. United States, 34 CCPA 80, C.A.D. 346 (1946), wherein 28 liquidations over a period of 2 years did not constitute a practice. Relevant to that court's decision was the uncertainty which existed as to the proper classification of the merchandise during the two year period. Also, the court found that when Customs had not had a reasonable opportunity to adequately investigate the proper classification for a type of merchandise, an established and uniform practice will not arise in the interim.

It is our observation that application of the factors listed in Heraeus-Amersil, supra, militate against the existence of a practice for the following reasons:

(1) The number of entries involved over a two year period is not significant;

(2) Customs was uncertain as to the proper classification of these moon boots noting contrary liquidations at a different port, and

(3) Customs did not have a reasonable opportunity to adequately investigate the product as it appears that the ports involved may not have been aware of the variation in construction.

Also relevant to the practice issue involved here is the case of Siemens America, Inc. v. The United States, 1 CAFC 9, 692 F.2d 1382 (1982), wherein the court refused to find a practice where the appellants failed to prove that they were the sole importer of merchandise imported only at one port even though appellant's merchandise was uniformily classified at that

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

800660

D13

port for a 2 year period. In the present situation the inquirer is but one of many importers of moon boots. In addition the inquirer cannot demonstrate that all other importers of these boots had all their entries liquidated under item 700.56, TSUS. In fact, we know of at least three entries of double-injection moon boots entered through the port of Kansas City which were entered and liquidated under item 700.53, TSUS.

HOLDING:

The double-injection moon boots are properly classifiable under item 700.57, TSUS. You should inform the inquirer of this ruling.

Arthur P. Schaffner
for Harvey B. Fox

THIS DOCUMENT MAY BE RELEASED TO THE

077026

Kenneth G. Weigel, Esq.
Morgan, Lewis & Bockius
1800 M Street, N.W.
Washington, D.C. 20036

Dear Mr. Weigel:

In your letter of September 25, 1985, you request the classification of chloroxylenol, in behalf of your client, Ferro Corporation, a domestic producer of the same class or kind of merchandise within the meaning of 19 USC 1516(a)(2).

You state that chloroxylenol is an anti-microbial synthetic organic chemical with both industrial and medicinal uses. Some of the uses are said to include a preservative in soaps, creams, and waterless hand cleaners. It is also said to be an active ingredient in surgical scrubs, health care-personnel hand washes, and topical antifungals, and as a preservative and fungicide in adhesives, metal working fluids, photographic film emulsions, starches and printing inks.

You note that Customs has classified the product as an anti-infective agent in item 411.93, TSUS, or in item 403.57, the provision for halogenated, sulfonated, nitrated, or nitrosated derivatives of phenol or phenol-alcohols.

A review of the technical literature indicates that chloroxylenol is an active ingredient in germicides and antiseptics, and is used for mildew prevention. It is also listed as a well-known antimicrobial agent. No reference could be found to its use as an intermediate in the formulation of industrial products.

Cu[illegible] is therefore of the opinion, in view of its many uses the tariff would consider drug uses, that chloroxylenol is a product suitable for medicinal use, and, therefore, classifiable in item 411.93, TSUS. "Suitable for use" does not mean 'chief' use but actually, practically and commercially suitable.

Ms. Leslie A. Barnes
Gladish & Asociates
RD#6 Cargo Bldg. #8
P.O. Box 281074
San Francisco, California 94128

Dear Ms. Barnes:

In your letter of July 22, 1985, you inquire as to the tariff classification of a brass door stopper from South Korea. A sample was submitted.

The sample is of tubular brass construction and measures nearly 4 1/2 inches long and 7/8 inch in diameter. At one end is a plastic push button which, when depressed by the thumo, causes an inner brass tube to extend an additional 2 inches. The article is a security device or door guard which functions much the same as a safety chain. Installed in a pre-drilled hole flush with the floor and in the path of an opening door, the inner tube can be released by depressing the plastic button, thus blocking the door from opening futher. There is no indication whether the device is suitable for use only around the home, or has applications in the workplace or other industrial environments as well.

The brass door stopper security device is classifiable under the tariff provision for other articles of copper, not coated or plated with precious metal, in item 657.35, Tariff Schedules of the United States (TSUS), dutiable at the rate of 5.3 percent ad valorem. Products of the Republic of Korea classifiable in item 657.35, TSUS, are among those for which duty-free entry is authorized under the Generalized System of Preferences (GSP), if otherwise found to be qualified under applicable law and Customs Regulations. Copies of the relevant provisions are enclosed for your reference.

Sincerely,

Arthur P Schaffer

Suite 107
Miami, Florida 33143

Dear Ms. Pevsner:

In a letter to you of September 30, 1985 (814868), from our New York office, classification and rates of duty were set forth regarding certain mixtures containing various types of alcohol with mixed xylenes.

This letter concerns the dutiable status of ethanol mixtures containing mixed xylenes, which you state contain by weight 30 to 50 percent ethylbenzene.

Except as otherwise provided below, the mixtures you list would be classifiable as follows:

Percent Mixed Xylenes	Percent Ethanol	Classification
5	95	427.88
10	90	432.10
20 (containing up to 35% ethylbenzene)	80	432.10
20 (containing over 35% ethylbenzene)	80	407.16
25	75	407.16
50	50	407.16

The ethanol mixtures which contain 10 percent mixed xylenes would be classifiable in item 432.10, TSUS, dutiable under items 427.88/901.50 at 3 percent ad valorem plus 60 cents per gallon. The 20 percent mixed xylene mixtures which contain from 30 to 35 percent ethylbenzene are also classifiable in item 432.10, TSUS.

The 20 percent mixed xylene mixtures with over 35 percent ethylbenzene and ethanol mixtures which contain 25 or 50 percent mixed xylenes would be classifiable as a mixture under item 407.16 TSUS, dutiable at 1.7 cents per pound

E4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material, item 427.88/901.50 at 3 percent ad valorem plus 60 cents a gallon.

Products classifiable in item 407.16, TSUS, which are products of a country entitled to GSP benefits are entitled to duty free treatment upon compliance with all the regulations.

The letter of September 30, 1985, referred to above, is modified to the extent inconsistant with the above.

Sincerely,

Harvey B. Fox

SUBJECT: Proposed Change of Practice: Postage Stamps Printed "Cancelled to Order"

This is in response to your memorandum of September 26, 1985, regarding a proposed change of practice of classification of "Cancelled to Order" postage stamps.

No change of practice has been implemented and the decision in Legal Determination 3611-320, March 23, 1978, should continue to be followed. This decision holds that stamps, if officially issued by the government, are classifiable under item 274.40, TSUS, which provides for postage and revenue stamps, cancelled or not cancelled.

As far as we can tell, the draft proposed change of practice was never acted upon. Our position now is that a change of practice notice will not be issued.

CLA-2:CO:R:C:G
077091 JCH

District Director of Customs
P.O. Box 2112
San Juan, Puerto Rico 00903

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 49094000178, 210, 211, 212, 213, 214, 215, 216, 217 and 221.

The above-captioned protests and applications for further review were filed against your tariff classification of electrical articles imported from Singapore. The protests cover a total of 107 entries filed from April 1983 to May 1984.

The merchandise was entered as eligible for an exemption from duty under the Generalized System of Preferences (GSP) as provided for in item 734.20, Tariff Schedules of the United States (TSUS), which covers parts of game machines. However, duty was liquidated at the applicable column 1 rates under the provision for integrated circuits in item 687.74, TSUS, in accordance with our decision of September 14, 1983, IA 8/83, file No. 072542. In that matter, we classified articles described as clip-on-board and dip-on-board components which contain programs for game machines and which it is indicated are similar to the instant merchandise.

The protestant does not challenge our decision, but claims it was a change in an established and uniform practice which cannot be used against the instant entries until published. However, no information or documentation has been submitted, apart from the isolated allegation of a practice, showing the instant importer's importation experience or any other circumstances warranting further inquiry concerning a possible practice.

It is further claimed that a change in tariff classification disqualifying the importer from the GSP free rate has prevented the importer from filing timely claims for an alternative partial exemption from duty under the provision for returned American goods in item 807.00, TSUS. Under that item, the value of American-made components assembled abroad is subtracted from the entered value of the completed article.

077091

E7

The protestant has been given ample opportunity to perfect the claim for this exemption, but nothing has been forthcoming. In fact, there is not even any indication as to how much it is being claimed the value of the merchandise in all 107 entries should be reduced under item 807.00.

Accordingly, with respect to both the claim that a practice exists and the alternate claim for a partial exemption under item 807.00, we find that this protest fails to specify the nature of and justification for the objections set forth in the degree of detail comtemplated under 19 CFR 174.13(a)(6). As will be shown by our disposition of this matter, these protests contain other procedural defects.

Accordingly, you are instructed to deny Protest No. 49094000217 as a second protest for all of the entries covered by Protest No. 49094000214 in violation of the one-protest-per-entry rule in section 514(c)(1), of the Tariff Act of 1930, as amended. You are also instructed to deny protest No. 49094000221 with respect to its coverage of entry Nos. 413886, 413887, 413926, 412944, 413946, 413985, 414324, 414912, 414925, 415260 and 416264 under the same authority as a duplication in part of protest No. 49094000212. The remainder of that protest and the remaining protests should be denied in full for the reasons expressed above in the preceding paragraphs of this decision. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

MAR 21 1986

Joseph F. Sandler, Esq.
Arent, Fox, Kintner, Plotkin & Kahn
1050 Connecticut Avenue, N.W.
Washington, D.C. 20036

Dear Mr. Sandler:

This is in reply to your letter dated October 9, 1985, requesting reconsideration of Headquarters Ruling Letter (HRL) 076683, dated September 26, 1985, holding a certain mixture of sugar and dextrose to be commingled merchandise.

That decision was reached in large part because of the court decision in Arbor Foods Inc. v. United States, Slip Op. 85-31 (1985). In HRL 076683, we pointed out:

> The court observed that, prior to the issuance by Customs of certain telexes to its field offices, the subject blend and other similar blends had been classified as edible preparations. However, the court also noted that the Secretary of Treasury, through a division of the Customs Service, had found that a uniform and established practice did not exist for the instant merchandise or for similar sugar blends. Lastly, the court found that Arbor was unable to establish that the sugar blend possessed a "valid commercial identity" for the purposes of the telexes or to provide information on the chief use of sugar/dextrose blends in the United States. Accordingly, the court denied the requested injunction and refused to overturn the position of the Customs Service that the subject blend should be treated as commingled merchandise.

The above-quoted language pertaining to establishing a "valid commercial identity" is derived from Headquarters instructions dated November 7, 1984, and is consistent with subsequent issuances. See for instance HRL 075305 (January 25, 1985), where we gave importers the opportunity to establish a "valid commercial identity" for their importations.

The three products to be packaged from the imported blend are:

(1) A pure blend in a 2-kilogram retail package; it is labelled "granulated pure cane sugar and dextrose." It consists of 65 percent sucrose and 35 percent dextrose, i.e., it is the exact blend proposed to be imported.

E9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(2) A blend sold with the cornstarch added is in a 1-1/2 pound plastic package, labelled "10x powdered pure cane sugar and dextrose." This product is also sold in a 2 pound plastic package. This product consists of the exact blend proposed to be imported (65 percent sucrose, 35 percent dextrose) with cornstarch equal to 3 percent of the finished product.

(3) A blend with the molasses added is in a 1-1/2 pound plastic package, labelled "light brown pure cane sugar and dextrose." This product is also sold in a 2 pound package. This product consists of the exact blend proposed to be imported (65 percent sucrose, 35 percent dextrose) plus molasses equal to 22 percent of the finished product.

You state that all of these products have been and are being sold in these packages by U.S. Brands to food wholesalers throughout the U.S., who in turn distribute them to the retail food trade. A representative sample of invoices for these products as well as letters from customers of U.S. Brands have been provided. The first letter is dated October 29, 1985, and lists the purchases made by a firm from U.S. Brands for the period of March 15 to September 27, 1985. Similar information is contained in the other letter, dated October 30, 1985.

This claimed use is consistent with New York Classification Ruling 811745 of January 14, 1985. That ruling dealt with a similar mixture which was packaged for retail sale in 2 kilogram bags at the time of importation. The holding in the New York decision was that the product was classifiable as an edible preparation, not specially provided for, in item 183.05, TSUS, based upon the evidence of retail packaging. Consequently, it is our position that packaging the imported blend in the manner described in this ruling would be acceptable.

Under the circumstances of this case, classification under item 183.05, TSUS, would be considered appropriate on condition that the imported blend is packaged for retail sale. The application of this ruling to other importations would depend on the applicable facts.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

077108

Mr. David Esquenazi
Grupo Skenn, S.A. 10414
Apartado Postal 10-10414
1100 Mexico D.F

Dear Mr. Esquenazi:

This is in response to your letter dated August 8, 1985, requesting a tariff classification ruling with regard to a needlepoint kit from Mexico.

The sample kit, style No. 3, includes an appliance cover, yarn and a plastic needle. The appliance cover is complete except for the insertion of the colored yarns on a printed design. The cover consists of four polyester panels sewn together. A textile binding is sewn over each edge. A wood ring which will facilitate removal of the cover from the appliance is attached at the top, through a textile loop. Three sides of the cover are constructed of a quilted fabric. The fourth side is an open weave canvas material, with a printed design. The design consists of four colors, red, green, yellow and black. The design covers only a portion of the panel. Included in the kit are four matching color yarns which are to be inserted into the design by means of the plastic needle.

The question presented by your ruling request is whether this kit should be classified as an entirety or according to its separate components. It is our view that this kit should be classified according to the separate components included in the kit. On numerous occasions Customs has ruled that needlepoint kits are classified in such a manner. See e.g., Headquarters Ruling Letter (HRL) dated May 29, 1985, file No. 075570. Doll kits not sufficiently advanced to be considered dolls have also been classified according to their separate components rather than as an entirety.

Accordingly, the appliance cover is classifiable under the provision for articles not specially provided for, of textile materials, other articles, not ornamented, of man-made fibers, other, in item 389.6270, Tariff Schedules of the United States (TSUS), dutiable at the rate of 4 cents per pound plus 10 percent ad valorem. The acrylic yarns are classifiable under the provision for yarns put up for handwork, and sewing threads, of man-made fibers, valued over 90 cents per pound: yarns put up for handwork in item 310.9300, TSUS, (textile category 605) dutiable at the rate of 14.5 percent ad valorem. Articles falling within textile category 605 from Mexico require a visa. Finally, the plastic needle is

E12

classifiable as a household article, not specially provided for, of plastic in item 772.15, TSUS, with duty at the rate of 4 percent ad valorem. Products of Mexico classified under this provision are eligible for duty-free treatment under the Generalized System of Preferences (GSP).

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

909 First Avenue
Seattle, Washington 98174

Dear Sir:

Re: Application for Further Review of Your Decision in Protest Number 3004-5-000131

This application for further review protests your classification of wheat germ under item 183.05, Tariff Schedules of the United States (TSUS). Protestant requests classification under item 184.70, TSUS, or item 184.85, TSUS.

FACTS:

The Customs Laboratory report discloses that the imported wheat germ contains 30 percent protein.

ISSUE:

Whether the protein level of the wheat germ precludes classification of the product as commercial wheat germ?

DISCUSSION OF LAW:

Your office has classified the imported wheat germ as being hi-purity (for human consumption) as opposed to Number 2 (commercial grade) based on the amount of protein contained within the wheat germ. This decision was made on the basis of phone conversations with four flour mills, (two in Canada and two in the United States). The information obtained disclosed that Canadian hi-purity contains no less than 29.5 percent protein and American hi-purity would be 25 percent protein or better.

E14

TO THE

We have been able to verify the information you obtained in the AFMA Feed Ingredient Guide. That publication provides that wheat germ must contain not less than 25 percent crude protein to be considered wheat germ and that 25 percent - 30 percent protein is a typical minimum of protein to be contained in wheat. The Guide goes on to say that a substantial quantity is produced for human food uses and the fat and protein in this product will run much higher than the minimum shown.

Protestant has furnished a copy of a January 21, 1985, letter from the miller setting forth their specifications on the "commercial" wheat germ. While those specifications show a protein level of 23 percent, the Customs lab report clearly shows a protein level of 30 percent in the imported product. Since imported merchandise is subject to classification in its condition as imported, we must look to the 30 percent figure in deciding this protest.

Regardless of whether a 25 percent protein figure, a 29.5 percent protein figure or a 30 percent figure is used to define wheat germ for human consumption, the imported wheat germ containing 30 percent would be considered as being for human consumption.

HOLDING:

You are directed to deny the protest. Please see that a copy of this decision attached to Customs Form 19 is furnished the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

077137

Richard M. Belanger, Esq.
Sharretts, Paley, Carter & Blauvelt, P.C.
1101 Connecticut Avenue, N.W.
Washington, D.C. 20036

Dear Mr. Belanger:

In your letter of October 16, 1985, you requested on behalf of your client, Slater Steels Corporation, that we find the existence of an established and uniform practice, within the meaning of section 315(d), Tariff Act of 1930, as amended (19 U.S.C. 1315(d)), to classify certain alloy and tool steel products as blooms or billets if the products meet the dimensional requirements of Headnote 3(b), Subpart B, Part 2, Schedule 6, Tariff Schedules of the United States (TSUS).

In support of your position that such a practice exists, you state that your client has imported these alloy steel products as blooms or billets under item 606.69, TSUS, for approximately 20 years. These importations have been principally through the ports of Detroit and Champlain. Additional information from you indicates that all of the imported products have at least one surface that has been machined. However, the controlling criterion for classification purposes, as you state, is one of shape and dimension. Therefore, if an alloy product is within the stated shapes and dimensions in Headnote 3(b), supra, it would be classified as a bloom or billet.

An established and uniform practice is a practice which has existed over a period of years, is known to Customs and the importing community, and is uniform at all the major ports where entries have been regular or of a significant volume of merchandise. 19 U.S.C. 1315(d) codifies the restraint on Customs when classification of an article is found by the Secretary of the Treasury (authority delegated to the Commissioner of Customs) to be an established and uniform practice. The phrase "established and uniform practice" is synonymous with the phrase "long and continuous administrative practice." Biddle Sawyer Corp. v. United States, 48 Cust. Ct. 30, C.D. 2310 (1962), affirmed, 50 CCPA 85, C.A.D. 826 (1963). Unless there is a settled interpretation of the statutory provision by the agency charged with its administration, there is no established and uniform practice. United States v. Missouri Pacific Railroad Co., 278 U.S. 269 (1929). A "settled" interpretation is one which is long-standing in construction, uniform in application, and well-known to the administering authority.

F2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

For the sake of argument (because evidence of actual liquidations has not been received), the alloy steel products produced by your client and its predecessor producer, Colt Industries, are considered to have been entered and liquidated as blooms or billets through the ports of Champlain and Detroit for approximately 20 years. This was not disputed by the Customs authorities at those ports. Classification at those ports was based on the submitted documents which described the products as blooms or billets and as having dimensions within those specified for blooms or billets. Alloy products that differed only in the fact that they were less than 3 square inches in cross-sectional area and were therefore precluded from classification as blooms or billets by statutory definition, were classified as alloy bar. However, the classification of the alloy products in issue has never been the subject of a specific interpretative ruling. Ruling letters that do exist concerning identical or similar alloy products are narrow in construction and, at best, ambiguous when considering the effect of certain statements of alleged facts.

In a ruling letter of March 8, 1974 (file 029525), for example, it was held that certain alloyed round forged steel products, fully conditioned to remove surface defects and for use in an extrusion press, were classified as semifinished steel products (blooms) because grinding to condition the surface was not a cold forming process. Although semifinished products in general were described in that ruling as products that are "converted into finished products by reheating and further hot working" after removal of surface defects by conditioning processes, no further reference was made to whether or not the alloyed products had to be further hot worked by extrusion or to be cut and formed into extrusion dies or machinery parts. In other ruling letters containing similar statements indicating either that the product is to be further hot worked or that "semifinished" products are subjected to conditioning before further hot working, the holdings usually turned on the nature of the rough machining as "conditioning" or "finishing."

These rulings, therefore, are not evidence of a settled interpretation of a statutory provision. Furthermore, Headnote 3(b), the statutory provision in issue, is ambiguous because the term "semifinished" is not defined in the Tariff Schedules. As noted in the discussion on existing rulings, this term has been variously construed, both as to meaning and as to importance. A settled interpretation requires, at the least, a uniform application of the meaning of this term.

In practice, the term "semifinished" has been given greater importance at several ports of entry. Specifically, at Buffalo, alloy steel products which, at the time of importation, were not normalized or rough machined were considered semifinished because the assumption was that they had to be reheated and hot formed. This has been the position at Buffalo since 1971. Products of Colt Industries, Ltd., were involved in classification questions at Buffalo. Other ports of entry have used these criteria to determine whether a product was semifinished: dimensional tolerances within bar specifications, soft centers, or contract requirements for specific dimensional tolerances. Finally, we note that Colt Industries, Ltd., predecessor to your client in the production of the alloy steel

F3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

products in issue, was on notice that the tariff classification differed at two ports of entry. No protests, requests for advice or for rulings on prospective transactions, or differences of opinion were forwarded to Headquarters for review and decision, although the issue has been recognized as unsettled since 1971. Therefore, we cannot find that the tariff classification has been uniform during this long period of liquidation.

We find that there is no established and uniform practice to classify alloy steel products as blooms or billets solely on the basis that they satisfy the requirements for the dimensions in Headnote 3(b), Subpart B, Part 2, Schedule 6, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Port Huron, Michigan 48060-5471

Dear Sir:

Re: Decision on Application for Further Review of Protest Nos. 3802-3-000278 and 3802-4-000260.

These protests were filed against your decision in the liquidation on July 8, 1983, of entry No. 83-534118 dated April 26, 1983, and the liquidations on September 7, 1984, of entry Nos. 84-532143 dated March 14, 1984, 84-534002 dated April 20, 1984, 84-535675 dated May 22, 1984, 84-536316 dated June 4, 1984, 84-536911 dated June 14, 1984, 84-537200 dated June 20, 1984, 84-537633 dated June 28, 1984, and 84-537687 dated June 29, 1984. The entries cover shipments of a product called Voranol, said to be used in the preparation of polyurethane resins.

FACTS:

The merchandise, Voranol, has been described by the manufacturer as a polyether polyol (triol). The New York Customs Laboratory and the Chicago Customs Laboratory analyzed samples of the product. New York described the samples as an ether of a polyhydric alcohol. Chicago described the sample as having characteristics of glyceryl (polyoxypropylene-polyoxyethylene) triol (glycerine ether type). The three names given to Voranol, polyether polyol (triol), ether of a polyhydric alcohol (ether of glycerine), and glycerine triol are used to describe the same material.

FS

TO THE

The merchandise was classified under the provision for ethers of a polyhydric alcohol in item 428.47, Tariff Schedules of the United States (TSUS). Protestant claims that the merchandise in question is more appropriately classified under the eo nomine provision for triols, in item 428.44, TSUS

ISSUE:

Whether Voranol is classifiable in item 430.20, TSUS, dutiable as a triol in item 428.44, TSUS, or an ether of a polyhydric alcohol in item 428.47, TSUS, or a single compound of ether of glycerine classifiable in item 428.40, TSUS.

LAW & ANALYSIS:

We find, after reviewing the chemical reaction involved in the manufacturing of Voranol, that it is a single compound, as described in Headnote 2(a) of Schedule 4, properly classifiable in item number 428.40, TSUS, as a glycerine ether. C.D. 4067 warrants a finding of this product as a compound and not a mixture. That decision points out that individual molecules of different length polymers are not different compounds. Therefore, the product in the instant case should not be classified as a mixture but as a single compound.

Also, glycerine ether is a proper classification because these types of products are commonly described and listed in the literature as polyethers.

In addition, if Voranol is appropriately described in each of the competing classifications, item 428.40, TSUS,

RELEASED TO THE

prevails because glycerine ether is the first provision listed in the Tariff Schedules. See Part 2(D), Headnote 1, Schedule 4, TSUS.

HOLDING:

Therefore, Voranol is properly classifiable under the provision for glycerine ethers in item 428.40, TSUS.

Entry No. 83-534118 is dutiable at the 1983 rate of 4.4 percent ad valorem. Entry Nos. 84-532143, 84-534002, 84-535675, 84-536316, 84-536911, 84-537200, 84-537633 and 84-537687 are dutiable at the 1984 rate of 4.2 percent ad valorem.

You should deny the protest. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Scheffler

SUBJECT: Self-Adhesive Printing Paper; Internal Advice 77/85

By memorandum dated September 9, 1985 (CLA-1-DD:CV:IS:1 RCA), you forwarded a brief, dated July 18, 1985, from counsel representing the importer of the subject paper from Finland.

FACTS:

Submitted samples represent coated papers with backings, 40 to 50 inches wide, which are presure sensitive and imported in rolls 30 to 40 inches in diameter. After importation, these papers are cut to small sizes and used to produce printed self-adhesive labels. This is stated by counsel to be only known commercial use for these papers.

You state these papers have been entered at various times under the provision for sheets, strips, tapes, stencils, monograms, and other flat shapes or forms, all the foregoing articles which are pressure sensitive, in item 790.55, Tariff Schedules of the United States (TSUS). Entries have likewise been accepted under the provision for duplex decalcomania paper, in item 254.32, TSUS. Counsel advances arguments that the subject papers are properly classifiable under the provision for printing paper, impregnated, coated, or both but not otherwise treated in item 254.46, TSUS.

RELEASED TO THE

F8

ISSUE:

Does item 790.55, TSUS, most specifically describe the subject papers?

LAW AND ANALYSIS:

Initially, counsel maintains that the essential character of these papers is imparted by their high quality printing surfaces, and that they are covered by Schedule 2, Part 4, Subpart B, Headnote 1, TSUS, which governs importations under item 254.46, TSUS, among others. This headnote describes the merchandise covered in Subpart B, in part, as paper and paperboard, in rolls and sheets, not cut to size or shape, and not made up into articles finished or not finished. Moreover, it is noted that while the papers are to become pressure sensitive labels, in their finished condition, it is their status as printing papers, as imported, that controls their classification. Finally, counsel maintains there is no legislative intent that item 790.55, TSUS, be invasive of other provisions, and that the subject merchandise is a material not within the provision for "articles," in item 790.55.

Nothwithstanding coverage of the subject merchandise by Schedule 2, Part 4, Subpart B, Headnote 1, TSUS, it is our opinion that item 790.55, TSUS, applies here by reason of Schedule 2, Part 4, Headnote 1(v) which precludes from inclusion in Part 4 certain articles specifically provided for in Schdule 7. In this regard, Schedule 7, Part 13, Subpart A, Headnote 2, TSUS, which governs entries under item 790.55, TSUS, defines the term "pressure sensitive" as referring to "...articles which have an adhesive coating on one or both surfaces that will adhere to other surfaces upon the application of pressure only." This headnote specifically describes the subject paper. See p.2 of counsel's brief. We have been cited to no convincing authority that the term "article" is to be limited, as counsel suggests, to exclude the subject papers.

F9

RELEASED TO THE

The judicial and administrative decisions cited by counsel are either legally or factually distinguishable. United Mineral and Chemical Corp. v. United States, 63 Cust. Ct. 522, C.D. 3946 (1969), considered merchandise described as polyurethane plastic foam permanently laminated to double-faced pressure sensitive tape. In confirming classification in item 770.40, TSUS, and negating the applicability of item 790.55, TSUS, the court noted, at p.526, that "...as stipulated by the parties hereto, it is the polyurethane plastic... not the pressure sensitive tape, which imparts to the article... its essential characteristics." In addition to the obvious dissimilarities between the merchandise at bar and that which we are presently considering, there is no showing why, or to what extent, the essential characteristic of the subject paper is imparted by its printing qualities, rather than its pressure sensitive qualities. In The Holson Co. v. United States, 64 Cust. Ct. 76, C.D. 3961 (1970), the court, in considering the classification of certain photo album leaves, concluded from the testimony that they were not pressure sensitive articles at all, in that they did not comport with the aforecited definition of "pressure sensitive." In Inter-Maritime Forwarding Co., Inc. v. United States, 70 Cust. Ct. 133, C.D. 4419 (1973), the provision competing with the one in item 790.55, TSUS, was for electric insulators, of rubber or plastics, in item 773.30, TSUS. Again, this case is of no value in resolving the issues currently before us. Finally, our decision of September 12, 1977 (053484), dealt with a pressure sensitive plastic stick-on badge of an animal cartoon character, and held it to be a "toy," in accordance with the Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, definition of that term.

RELEASED TO THE

F10

077154

These decisions are cited by counsel for the purpose of showing that neither the courts nor Customs has treated item 790.55 as being an invasive tariff provision. This obscures, however, the real issue in this case, that is, whether Schedule 2, Part 4, Headnote 1(v), TSUS, would preclude the applicability of item 254.46, assuming it otherwise applies.

HOLDING:

Having concluded that the subject papers are within the headnote defining "pressure sensitive," we further conclude that they are specifically provided for under the provision for sheets, strips, tapes, stencils, monograms and other flat shapes or forms all the foregoing articles are pressure sensitive, in item 790.55, TSUS.

Re: Application for Further Review of Detroit Protest No. 3801-5-000012

Dear Sir:

This application for further review is against your classification of a cheese sauce as an edible preparation not specially provided for under item 183.05, Tariff Schedules of the United States (TSUS). The protestant is of the opinion that the product should be classified as a sauce under item 182.46, TSUS.

The product in question is "Prince" 785 Cheese Sauce Mix. This product was the subject of ruling request 807983 which apparently was merged into another file and was not separately responded to. The file on ruling request 807983 contains much pertinent information regarding "Prince" Cheese Sauce Mix.

Component material breakdowns furnished by the importer indicate that the different ingredients are present in the product, by weight and by value, as follows:

Ingredient	Percent By Weight	Percent By Value
whey	64	54.3
flour	9	4.95
salt	9	1.9
starch	8	10.16
cheddar cheese	8	28.60
miscellaneous	2	0.12

All parties (the importer, the concerned import specialist in Detroit and the NIS) agree that the butterfat content of this mix is below 5.5 percent by weight of the mixture.

F12

This cheese sauce mix is a cheese flavored, orange colored powder. It is imported in bulk, to be repackaged after importation into individual pouches of one and one-quarter ounces, net. These pouches are to be added to a retail size box of macaroni, and the final product sold as "Macaroni and Cheese Dinner". In use, the cheese flavored powder will be combined with other ingredients to make a cheese sauce for the macaroni. Thus, directions on the box instruct the consumer to cook and drain the macaroni, then add the sauce mix (one and one-quarter ounces), together with one quarter cup each of butter or margarine (two ounces) and milk (two ounces). After mixing, the macaroni and cheese dish is ready to serve.

The term "sauce" has been the subject of many rulings and much litigation through the years. In Bogle v. Magone 152 U.S. 623 (1888), the Supreme Court stated:

> "The word 'sauce' as commonly used, designates a condiment, generally but not always in liquid form, eaten as an addition to and together with a dish of food, to give it flavor and make it more palatable; and is not applied to anything which is eaten, alone or with a bit of bread, either for its own sake only, or to stimulate the appetite for other food to be eaten afterwards."

The March 1982 Summary of Trade and Tariff Information entitled "Edible Preparations" points out that "(t)he sauces included in this summary are substantially finished food preparations and not mere materials used in the manufacture of sauces;...".

Applying the foregoing criteria to the product at hand, it is apparent that the cheese flavored powder, combined with butter or margarine, milk, and cooked macaroni, make a macaroni and cheese dinner, the basic components of which are (1) macaroni and (2) cheese flavored sauce. The cheese flavored sauce in the finished dish consists of 1-1/4 ounces of cheese flavored powder, 2 ounces of butter or margarine, and 2 ounces of milk. These ingredients are added directly to the hot macaroni--without prior mixing. This manner of preparation does not, however, negate their status as
